WIND Screens Actually in Stock: Eastings, Baby, Standard, Royal, Blumels latest; Cameo hoods, finest quality, waterproof, with curtains round; £3/5.—64 Bishopsgate, London. [0620]

HOOD Materials.—3 hoops 10/-, brass fittings 3/3, extensions 2/6 pair, turnbuckles and eyelets 4/9 dozen, best twill 13/- yard 72in.—Henry Jones, High Rd., Tottenham, London. [2316]

BODIES.

S
FOR

SANDUM, the largest and most renowned sidecar body builders in country.

SANDUMS have put on the market over 10,000 sidecar bodies.

SANDUMS have the only adult 2-seater body on the market which is not unsightly. Write for our Dual-purpose Body catalogue.

SANDUMS Repair Bodies and Chassis of any make with the use of up-to-date machinery in four factories.

SANDHAM Engineering Co., Ltd., 336, Gray's Inn Rd., London, W.C.1. 'Phone: Museum 3427. [0634]

VENUS Step Bodies are the best for old chassis.

VENUS Bulbous Bodies are roomy and very smart.

VENUS Tandems hold 2 persons. Strong and light, but not unsightly. Get one.

VENUS Bodies are made in a factory and supplied direct. Catalogue free.

VENUS Sidecar Co., 6-14, Courley St., S. Tottenham. [0519]

SIDECAR Bodies, coachbuilt, best quality, £7/7; original £12/12.—64, Bishopsgate, London. [0614]

CAMBER.—Coach Bodies; £4/17/6 to £12/17/6; to suit any make; lists free.—Bright and Hayles, 78, Church St., Camberwell. [3564]

CAMBER.—Sidecar repairs, repainting, and upholstering; estimates free.—Bright and Hayles, 78, Church St., Camberwell. [3564]

ROYAL Leicester Sidecar Bodies fit any chassis, first-class finish; have a few coachbuilt bodies, clearance lines from £5 each; extra good value.—The Willowbrook Motor Co., Leicester. [0336]

BASTONE'S for coachbuilt bodies (no better or cheaper house), sporting models, bulbous back and step pattern. All at low prices. Call or send your requirements.—228, Pentonville Rd., King's Cross, London, N.1. Tel.: 2481 North. [6851]

SIDECAR Body Designs for the trade only. Working, coloured, pencil, or line drawings of original designs, also working drawings, full-sized or to scale.—Cooper's Vehicle Journal, Ltd., established designers to the coach trade for over 80 years. Consult us when designing new ideas.—20, Tudor St., London, E.C.4. [0004]

SIDECAR ATTACHMENTS.

S
FOR

SANDHAM, the smartest sidecar specialists.

SANDUM Sidecars.—Best value in Olympia Show.

SANDUM Chassis.—Insist on having our enclosed wheel type of chassis for safety.

SANDUM Models.—The Exquisite 23 gns., and sports 26 gns., are of distinctive appearance.

SANDUM Elite Sidecar, 27 gns.; the smartest sidecar on the road; highly recommended in "The Motor Cycle."

SANDUM Dual Purpose Sidecar (patented). A single or 2-seater sidecar as required in 5 seconds. Size of body as our single-seater Elite. Luxuriously comfortable seating for 2 adults, with the weight in correct position over rear axle. Finished in colours to suit any make of machine, 42 gns.; bodies only, 21 gns. The latest development of the 2-seater as designed by us, and approved by the recognised experts.

SANDUM Featherweight Streamline Body, smart and racy, weight 18 lbs.; price £4/17/6.

SANDHAM Engineering Co., Ltd., 336, Gray's Inn Rd., W.C.1. 'Phone: Museum 3427. Factories: 162 to 165, Pentonville Rd., N.; and Britannia Works, Britannia St., W.C. [0019]

MIDDLETON'S Patent Spring Wheel Sidecars are guaranteed 3 years.

MIDDLETON'S Patent Unbreakable Chassis for high-powered machines: Zenith, Harleys, Indians, New Imperials, Sunbeams, Blackburnes, etc.

INDIANS with kick starter on left present no difficulty with Middleton's special model.

MIDDLETON'S specialise in frame repairs of all kind. Twisted motor cycle frames and forks promptly corrected.

SECOND-HANDS of various makes for sale. Your old sidecar taken in part exchange.

MIDDLETON'S Spring Wheel Sidecars are not only safer and more comfortable, but are faster on bad roads than rigid. They give to the bumps, not bash into them.

MIDDLETON'S, London's oldest established sidecar makers, wholesale, retail, and export, 27, Stroud Green Rd., Finsbury Park (near Tube). 'Phone: Hornsey 1584. [0522]

GENUINE SALE of SHOP-SOILED and SECOND-HAND MOTOR CYCLES

6 h.p. A.J.S. Combination, 1920, hardly used, lamps, horn, spare wheel, Easting screen, etc., tax paid.

6-7 h.p. B.S.A. Combination, 1921, slightly shop-soiled, lamps, horn, spare wheel and tyre, hood, screen, tax paid.

LEVIS "Popular" late model, complete with accessories.

No reasonable offer refused.
First cash secures.

Large stock of Douglas spares.
TRADE SUPPLIED.

Immediate delivery of models,
DOUGLAS, LEVIS, B.S.A., etc.

We have actually in stock a
brand new 1921 Model 3½ h.p.
Overhead Valve Douglas.

Price £150.

Call or 'phone for full particulars.

A British Success in Belgium.

THE victory of a British single-cylinder machine in last week's Belgian Grand Prix adds one more link in the long chain of successes in important events this year. It also emphasises the degree of perfection to which the British single-cylinder engine has been developed. In three big international races—the Tourist Trophy, the French Grand Prix, and now the Belgian race—three different British singles have beaten the field, which is more to the credit of our motor cycle industry than had one particular machine achieved a triple victory. The 500 mile race at Brooklands was the only other big event, and this we lost to a country which has developed the big twin machine as we have done the smaller and more economical single-cylinder engine; but even in this race, as meritorious as was the American victory, the speeds attained by the 1,000 c.c. twins were not so much higher, as might have been expected, than those of the singles of half the capacity. The British Empire has also produced the winning riders in all these races.

Sunday Competitions.

IT is with regret that once again we have to refer to Sunday competitions. Our attitude towards them is too well known to need explanation, as, for years, we have been averse to the organisation of sporting events on the Sabbath; in fact, our efforts have been the means of checking over-enthusiasm of trials organisers, who, at times, are apt to forget the feelings of the general public.

The Auto-Cycle Union shares our views, and has always been against anything which tended to undermine the popularity of the pastime; but since some of the local A.C.U. centres—especially those in the North—make a speciality of Sunday competitions, it would appear that the governing body has not full control over its subsidiary organisations.

Social club runs in comparatively small bodies are popular and do nothing but good if reasonably conducted. On the other hand, the passage of large numbers of motor cyclists, especially through quiet villages, is apt to disturb the peace of the inhabitants, and thus cause ill-feeling.

Numbered machines and riders merely aggravate the case, since they advertise the fact that a certain number of persons propose to enjoy their day's sport regardless of the feelings of the majority.

We would once more remind motor cyclists—whether competitors or otherwise—of the necessity for riding quietly through villages during church hours, or at such times as the community are on their way to places of worship, for it is largely due to inconsiderate driving at such times that a certain amount of prejudice still exists.

Accessibility.

QUITE recently we encountered a machine, designed since the war, in which it was a matter of extreme difficulty to adjust the tension of the magneto driving chain. Not only were the two holding-down nuts difficult of access, but they differed in size.

This example serves to illustrate a fault which is still only too common. What should be the simplest adjustments are often the most difficult to carry out for want of a little attention on the part of the designers. When, for some good reason, it is not possible to place nuts in a convenient position, it should—at least be possible to supply a special spanner to facilitate removal.

On another occasion, a machine which passed through our hands had a number of nuts of odd sizes. No spanner in the kit would fit these nuts, and no fixed spanner could be bought to suit them, with the result that an adjustable spanner was the only tool available for removal.

We have often urged that standard nuts and fewer sizes be employed, and we would specially urge those who have their 1922 models in hand to study this point.

Honest and Smart.

I KNOW some cynics deny that in this planet of 1,500,000,000 inhabitants, there is even one individual who is both honest and smart. What would you say, dear readers, if I proved to you that such an individual exists? And in Manchester, of all places? I know he is smart, because he is organising mass production of one of my old brain-waves. And I know he is also honest, because he has offered me a royalty on it. (Not less honest than I am, because I refused the said royalty, both as a journalist who likes to keep his independence, and also as one who remembers other makers' clumsier efforts in that line.)

What is it?

WHAT is it? Oh, just a prop stand. Are you annoyed with me? Well, wait till you've tried it. Do you really like lugging a 3 cwt. 7 h.p. twin on to its legs? Do you like searching a moorland road with flush edges for some sort of a kerb on which you can lodge a footrest whilst you light a pipe? Do you like being fetched out of your favourite hotel by a constable because you 'bus has tipped off the kerb, and a motor coach has juggernauted it? Do you like stopping halfway up Porlock because a large stone has joggled your rear stand out of its spring clip? When this new prop stand comes along—weight, about a feather and a half, cost next to nothing, and instantly fittable to anything from a two-stroke to a ninety bore twin (this is the inventor's account, *bien entendu*)—you will be permanently insured against any of these mishaps. The rear stand will then be restricted to its proper duties, *i.e.*, supporting the tail of the 'bus during tyre repairs; and it will, therefore, be secured by a clip which is vibration-proof.

Some Stand Reminiscences.

AS befits a veteran I have owned all sorts of stands. I remember days when stand and carrier were one and the same, tied to a hole in the back of the saddle by a bit of copper wire; on tour you had to unstrap all your luggage before you could mend the tyre. I remember stands composed of two separate legs, insecurely clipped to each chain stay;

they used to drip bolts and nuts along the road, jangle with a devil's tattoo to the forrard end of the chain stays, and then chock the wheel spokes. I remember stands with such narrow bases that the machine toppled over, if, whilst dismounted, you incautiously exhaled your cigarette smoke transversely instead of longitudinally. But I have loving memories of one two-legged stand, date about 1907. Each leg had two positions: half down, they acted as props; right down, they formed an ordinary stand. They were very heavy, rather expensive, and spike-ended, and the spikes generally engaged the slack of my trousers when I sprang for the saddle. But I tolerated their misdeeds for years because either leg could be used as a prop, and a prop stand is the greatest petty comfort which a motor cyclist can possess. After I have said this, I shall rejoice in my pseudonymity, supposing the latest prop stand never comes to anything, as infuriated readers haunt our offices with guns; but I think it is going to be all right. More when the times are ripe.

Our Hill-climb.

THE club was only a few months old, and the hill-climb was our first real stunt. We really organised it very prettily. The natives attended in their billions. The electric timing would have charmed Lindsay Lloyd. There were no crashes. The entry fees more than covered the cost of the medals and administration expenses. The day was fine, and the police most complacent. Yet the evening was a dead failure. Why? Well, the eager, ignorant, amateurs, who comprise the bulk of our membership, had denied themselves all sleep for days previously, and had lived continuously in their sheds, rubbing up the points of their sparking plugs with Globe polish, breathing heavily on dismantled ball bearings, and otherwise endeavouring to secure the final veneer of speed. On the Friday evening prior to the great day, the three local garages received per passenger train special factory-tuned editions of the machines for which the aforesaid garages hold local agencies. That these machines mopped up the open classes goes without saying. The very same machines—cannily bestridden by the pet customers of the aforesaid garages—also mopped up the member

Occasional Comments.—

and amateur classes. The specials skipped up the hill at just under 60 m.p.h. We poor locals coaxed up our reconditioned W.D. buses and other genuine private properties very cleverly—only three of us had to jump off and run alongside for a few yards. We got nothing. We are now saving up money to purchase more medals for another stunt. The factory machines all went home again by passenger train on Monday. Doubtless they will return—when we make it worth their while.

The Remedy?

TO find a cure for the swamping of local club events by factory buses, you should study the rules for the Scottish Six Days as framed by the Edinburgh and District M.C.C. They define a private owner as a man who rides a machine which has been his *bona-fide* property for at least a month. At least a month sounds rather timid; but anyhow it cuts out the week-end visit of a special factory bus, while it accepts the entry of young Algy, who ordered a Brough Superior by telegram as soon as he heard that the club was going to run a speed trial. I have not a word to say against the factory bus in the trade classes—it generally provides the thrill of the afternoon, and in this class it does not sail under false colours. But it is wholly out of place in the members' or amateur events, and only a milk-and-watery committee will stand such trifling.

A Touring Oil Tin.

FOR years past touring motorists, from the multi-millionaire on his Rolls down to the insurance canvasser on his baby two-stroke, have put up with tins of oil which leaked at the least provocation when their contents had once been tapped, and much profit has thereby resulted to the tailoring fraternity. Not long ago I got a lift from a member of *The Motorcar* staff, and when we got out tools to change a wheel, I found in his boot an *olla podrida*, in which sponges, sandwiches, and Prices' *Huile de Luxe* appeared to be the main ingredients. The Vacuum

people were the first firm to tackle this ancient hoodoo, and they sought to make the standard tin less filthy by fitting a tin shield to the spout. Prices' Co. have assaulted it along different lines. They have evolved a special touring tin which they supply empty at 4s. 6d. It holds rather over half a gallon, and its business end is provided with three special fittings. Item, a substantial screw stopper shaped to give a good spanner hold. Item, a nice long "teapotty" sort of spout. Item, a screwdown air release valve to ensure good pouring.

Too bulky for solo work, it is just the goods for sidecars and cycle cars. At the same time it would appear to make a very useful spare petrol tin for the soloist.

Why X—Lost the T.T.

JUDGE of the mortification at a certain factory when it was discovered that its riders had elected to use non-standard valves in the race, together with springs 30 lb. lighter than the factory product. The result was that the valves bounced against the valve caps and gave quite a lot of trouble.

The Trade and the Six Days.

CONTRARY to popular expectation, entries for the A.C.U. Six Days have topped the hundred mark, and, provided the majority of these toe the line on the 29th, the anti-A.C.U. section of the trade may regard itself as the minority. Now I am taking no sides over this year's pre-trial dissatisfaction, but I can put my finger on the trouble: it is the clause in the regulations to the effect that marks can be deducted at the discretion of the judges. There is nothing tangible about "discretion," neither is there any consistency. At the conclusion of the 1919 trial almost everybody with clean sheets up to the final examination lost marks on "condition," and naturally opinions differed as to the fairness of some of the judges' findings. Only the A.C.U. itself knows the full amount of trouble that was caused, so in 1920 the judges apparently "got the wind up," and even machines with broken "innards," but which were able to finish, were passed without penalisation. The result is would-be entrants do not know where they are. The "discretion of the judges" is such an elastic sort of factor. It is necessary this year for the A.C.U. to frame its final regulations with a reasonable chance of their being adhered to.

AN AMPHIBIOUS CYCLE CAR.

Call it what you will, there is originality in the conception of this double-purpose cycle car made to run both on land and in the sea. C. Berry, of Sidmouth, is responsible for the design of the little four-wheeler, which is driven by a 2½ h.p. Villiers two-stroke engine.

How a Motor Cycle ensured the Success of a Holiday in the Highlands.

EIGHTEEN days' sunshine, a golf course by the sea, and a motor cycle—in any order you please—are the constituents of the finest holiday possible. That, of course, is the opinion of the writer, who has just returned from such a vacation!

Nearly fifteen hundred miles were covered by road within the above time, but it was in no sense a tour; and my present endeavour will be to show how a motor cycle simply "made" a very ordinary golfing and "lazing" holiday in Scotland.

My chosen resort was Fortrose—an exceptionally beautiful little seaside town, not nearly so well-known as it deserves to be, ten miles from Inverness, and approximately 500 from my starting point (Coventry). It is, I believe, possible to reach Fortrose in just under twenty-four hours by the best expresses, and, at this time of the year, it is also generally possible for a fairly hefty male passenger to reserve at least one suit case in the corridor as his couch for the all-night journey. The third-class single fare is £3 9s. 0½d.

One Hundred Miles before Breakfast.

However, the Brooks "B170" on my chain-driven Triumph appealed much more strongly than the corridor suit case; and early one glorious midsummer morning—5.30 to be exact—saw a well-laden Triumph *en route* for the North, *via* Chester and Birkenhead Ferry. About 6 p.m. on the following day the same outfit ran into Fortrose, rider and machine as fresh as at the start.

It was a ride without incident, but then, one does not expect much "incident" from a fairly

new and high-class motor cycle nowadays. It was, however, an interesting and memorable ride, enjoyable every mile of it.

Chiefly remarkable were (1) the road over Shap (for its vileness, considering its importance) and (2) the road over the Grampians (for its fairness, considering that it has not been seriously remade for the last century). Since, I have heard several complaints about the latter route; my 28 x 3in. Palmer cord must have spared me much.

I bought just six gallons of petrol, and opened two quart tins of B.B., but at the journey's end had

little to spare in each case. This comes to but 25s.; my total running expenses for over 500 miles; and even including the intervening night's hotel bill and meals *en route*, there will have to be a very decided fall indeed in railway fares before I go north again by train!

Other Interests.

My golf clubs, despatched the night before by passenger train, reached their destination just three hours before myself; and the following ten days were spent in effecting a 50% reduction in my golf handicap. Incidentally the exact figure is not mentionable even now; and again, incidentally, I lost nineteen balls in the process! What matter? For the combination of a very sporting little course, with plenty of "rough," and a player better qualified to be a George Dance than a George Duncan, simply results in the inevitable.

The Triumph proved invaluable as a transporting medium both to the links—three-quarter of a mile—and to the moor.

500 MILES TO A GOLF COURSE.

Not all the Highland roads lead over rugged mountains or bleak moorlands. North-east of Inverness the scenery is, generally, not at all wild, but is very picturesque, and somewhat reminiscent of the less striking districts of North Devon.

10 Miles to a Golf Course.—

cluded corner of the beach for bathing—about mile.

Otherwise, I relarned the art of walking, and, in this respect, despite what "Ixion" says, golf is the best antidote to the motor cycle extant. After strenuous eighteen holes, however, it is very much more enjoyable to be whisked home to lunch by motor than to tramp it. There are no buses in Fortrose.

Sunday in the Highlands is not the Sunday of the Englishman; only because I feel sure that none of the elders of the local kirk are also readers of *The Motor Cycle* do I dare to mention surreptitious "de-coking" operations that were carried out one evening very near Monday. Beyond unusual gear box trouble, and two punctures while up there, that was the only occasion on which I opened a toolbag.

As a variation towards the end of my stay, I spent two more days on the saddle with the "Scottish" com-

Ross-shire is even now a very keen motor cycling county, but, from the interest of the school children, who in the outlying districts often get a half-holiday to view the passage of the "Scottish" competitors, one may safely predict that fifteen or twenty years hence there will be an even greater enthusiasm and demand for the two-wheeler. At present fully 90%

(Top) Northward bound. Nearing the two-hundredth milestone from the start—a typical glimpse of Ullswater.

(Bottom) Towering high above Loch Ness, Abriachan Hill is not so difficult that the tourist who appreciates a magnificent panorama of mountain and lake should shun the climb.

of the machines in the North are big singles, B.S.A.'s or Triumphs; and, for the benefit of some of our English readers, the Highlander does not motor cycle in kilts!

All too soon a return to work became inevitable, and on the following Friday afternoon I trekked southward once more, feeling keenly the delight of a good machine beneath me and the long open road in front.

Dunblane that night, and Nantwich the following, were my stopping places. This time, however, I visited Wigan and Warrington—a more direct route and on the whole quite good—but Shap I avoided, going round *via* Kirkby Stephen, Sedburgh, and Kirkby Lonsdale. For the first time, too, I donned my Hutchinson boots, for it rained heavily in Cumberland and Lancashire.

A late start on Sunday nevertheless allowed me to reach Coventry in time for lunch—another mechanically uneventful, but most exhilarating 500 mile ride.

Without a motor cycle the same holiday would have cost more; but even the most disinterested reader must agree that it would not have been worth half as much.

A.McL.

tors—Applecross on the Tuesday (rough going, but worth it for the scenery) and round Loch Ness to Glendoe and Inverfarigaig on Wednesday (again not too easy, but again worth it for the same reason). I think every variety of Highland scene is embraced in these two runs, and I can thoroughly recommend the routes to the motor tourist. Personally, I found neither Applecross nor Inverfarigaig nearly as fearsome as they are painted; and, indeed, after my return from the jaunt across Scotland to the former climb, I could not resist an invitation to another nine holes in pursuit of the little white ball! It does not get late, of course, till about 11.30 p.m. in the Highlands in July—and it gets light again shortly after midnight.

The Nature of the Country and the Difficulties of the Competitors Discussed.

Impressions of the INTERNATIONAL 6 DAYS TRIALS

NOW that the International Trials are over, it is interesting to review the impressions gained from the scenery, the nature of the roads, and the performances of the various machines—British and Continental.

Curiously enough, the most severe difficulties were found in the Jura country, and not in the high Alpine districts traversed towards the end of the trial.

Motoring Conditions.

Switzerland has not heretofore welcomed motorists with open arms, but it is improving, and a new Federal law has been passed bringing the control of all traffic under the Confederation, so that in two years' time motoring conditions will be far better than before, and the closed Canton of Grisons will be open to motor vehicles. At present each canton has its own motoring laws, and each village its own speed limit and fine. In one village the limit may be marked 15 km., 10 frs. fine; in another 12 km. and 2 frs. 20 cents fine, and so on.

Naturally, the Swiss were good enough sportsmen not to interfere with the competitors, and in most places gave them a good, if not enthusiastic, reception, welcoming them with wine, tea, or flowers. The Englishmen were hugely amused at the super-politeness of the marshals, who raised their hats and shook hands at every opportunity. The roads were good on the whole, though at times apt to be wavy; but the great trouble at the present time is dust, and few attempts to lay it were in evidence. Bituminised and tarred roads exist near Geneva and other large towns, but not elsewhere, and it seems clear that, if the Swiss will render their highways dustless, and motorists will drive carefully in villages and on dangerous roads, the antipathy of a section of the population will be entirely removed. As roads *per se*, the high passes are disappointing, and do not compare favourably with the great highways from France into Italy, which are wide and well maintained. The Swiss passes which we traversed are well

A Condor rider leaving the control at Vallorbe, on the first day's run.

(Circle) Cornering on an Alpine pass. H. Bischof (Motosacoche) on the Col de Mar chainz.

engineered, but narrow and with loose surfaces, and there is little doubt that the railway has spoiled the St. Gothard, as there is little road traffic over it. This is a pity, for the journey by rail condemns the traveller to twenty minutes in the dark during nine and a half miles through the tunnel, 1,000ft. below the summit, from which the views baffle description.

The Country Traversed.

The hard going in the Jura district and in that surrounding the Zurich mountains somewhat approached the conditions met with in English and Scottish Six Days Trials, but it is rather difficult to give the untraveller Englishman any idea of the hills the men had to surmount. Take, for instance, the Weisenstein on the second day. The climb is started at, say, 1,500ft. above sea level, and might be a hill in Surrey. Pine woods cover its flanks, and through them the road zigzags, keeping to a consistent gradient of 1 in 9, and with a slope inside the corners of 1 in 4 to 5. It keeps on like this, however, till an altitude of over 5,000ft. is reached, where the summit is all but bare of trees: and, when the air is clear, practically the whole range of the snowy Alps may be seen. Then the road drops steeply down a straight stretch crossed by deep gulleys of a frame-breaking nature down into a smiling valley, where the grass is as green as that of Ireland, and where drought is apparently non-existent, save that a few of the stream beds lack water.

Then consider the Alpine passes: they can be compared with nothing we have

in England. The St. Gothard starts from Atdorf, and twenty miles are traversed before 3,000 feet are reached—a mere nothing in these parts. The wonderful gorge where lies the Devil's Bridge is passed, and then the climb really begins. Sharp corners are encountered, and finally the plateau where lies Andermatt is reached, and then Hospenthal, the road junction—right to the Furka and left to the Gothard. The road goes up in *locets* (literally "boot laces") up the side of the hill, then more gradually upwards, and finally round more hair pins to the summit. Here one is right away from civilisation except for the one hotel. The wind blows cold and chilly from the north, lashing the waters of the two small lakes into wavelets. It is a treeless wild, surrounded by grand and lofty mountains, on which still lie large snowfields.

Worse than Mont Cenis.

On the descent it was possible to stop and gaze at the road lying in a tangle beneath. The mountain falls sheer below, and down this descends the road in a veritable maze. The corners seen innumerable, and each is built up with stones against the mountain flank. Such a road exists on Mont Cenis, and is known as the staircase (*le Scale*), but this one on the Gothard is far more severe. The competitors descending looked like flies upon the highway, even when only seven or eight "storeys" below.

From the time the hospice on St. Gothard is left one might be in Italy the language and the type of scenery and

Impressions of the International Six Days Trials.—

architecture are truly Italian. The village streets are narrow, and paved with cobbles, but two single rail-like tracks of smooth stone run down the centre for wheeled traffic. Clear of the *lacets*, the descent becomes easier, and several straight stretches are encountered.

A Babel of Tongues.

Switzerland is a confusion of tongues. English is spoken practically everywhere, but a knowledge of the country's three languages is useful. It is not easy to have to speak French in the morning and German in the afternoon, and be answered in a *patois* which resembles neither, or German in the morning and Italian in the afternoon, and again be answered in an even worse dialect.

Normally, motorists have to obtain permits to ascend these passes, and must not exceed twelve miles an hour for the average journey. This is no great hardship, as no one wants to exceed this speed, as it would hardly be safe to do so, especially when one *faux pas* would mean a tumble down many hundred feet.

The Lessons of the Trial.

The four riders actually in the trade in the event—H. Gibson, E. Williams, C. P. Wood, and H. Langman—inform us that they have learnt valuable lessons. Even on the second day, Gibson told us that he had learned more by this trial than he ever had in his life, and he is one of our oldest competition riders. Many of the men were forced to descend the passes on second and even bottom gears, not because their brakes would not hold, but because they were afraid of wearing them out. One member of the English team finished with his brakes entirely inoperative, and ascribed this state of affairs not only to the severity of the descents, but to the amount of dust which got on the brake drums. It was found exceedingly difficult to keep the engines cool, and Gibson told us he got the best results by using as small as possible. The Scotts seemed particularly happy all the time. Wherever we observed them, the machines of Langman, Wood, and Alfier appeared to keep as cool as their riders, and they only complained of boiling on the *Weissenstein*. The other water-cooled machine was Lambert's *Viratelle*. Circulation and other troubles lost him numerous marks, but such was the gallant ranchman's pluck and endurance that he finished every day.

Never in any trial have there been such punctures. Even Lees, who used challenge unpuncturable inner tubes, suffered once in this way, and there was general rumour that each competitor experienced at least ten. Though doubtless several of the men were unsuitably and under tired, there was a definite reason for the number of nail punctures. First, the Swiss Army had mobilised for manoeuvres, and many nails were shed from their boots. Secondly, nails were found on the road near Bulle placed at regular intervals on the road, and, in fact, one of the Motosacoche riders, and numerous punctures in one tube usually spaced round part of its periphery. It is feared, therefore, that some ill-disposed person had placed them

Ascending from the Lake of Neuchatel to the Vue des Alpes—a long trying climb, eventually reaching to an altitude of 4,300 feet. The photographer is busy snapping C. P. Wood (Scott) and Eric Williams (A.J.S.) as they round the bend.

there on purpose. There is no doubt that the daily runs were too long, in view of the difficult nature of the country. The Swiss organisers are well aware of this fact, but in their kindness of heart wished to show the competitors as much of their beautiful country as possible.

Organisation.

There is no doubt that this was the best organised trial yet held on the Continent. Much detail work had been put in beforehand, and everything was most carefully worked out.

In the competition for the International Trophy, the Swiss team lost marks as follows: Morand (2½ Condor), 21; Rothenbach (8 Motosacoche), 0; and Gex (8 Motosacoche sc.), 9=30 in all. The British team made a game struggle, but Newman (3½ Douglas) lost 93 marks; Eric Williams (2½ A.J.S.), 0; and Gibson (5-6 Raleigh sc.), 88=181. The day following the trial the competitors were entertained by the N.M.S., and taken for a steamer trip on the lake, and the next evening the prizes were distributed in the *Jardin Anglais*. The welcome given by the Swiss Motor Cycle Union and its treatment in general of the English visitors were so excellent that adequate justice cannot be done to it in print.

SPEED TESTS IN THE SWISS TRIALS.

British Machines in Good Tune after Six Days Alpine Climbing.

ON the last day of the International Trials in Switzerland, the condition of the engines was amply tested after their gruelling over the mountain passes by a timed hill-climb in the morning and a speed trial held during the afternoon.

The British machines were prominent in both events, and in the speed test had no difficulty in exceeding the set speeds required in the various classes. In the hill-climb one mark was deducted for every ten seconds below the fastest time in each class; while in the speed test one mark was lost for each kilometre per hour below the set speed.

The speed trial results are:

250 c.c. CLASS. (Set speed, 50 km.p.h.=31½ m.p.h.).	
A. Clerc (2½ Condor)	67.66 km.p.h.
350 c.c. CLASS. (Set speed, 60 km.p.h.=37½ m.p.h.).	
E. Williams (2½ A.J.S.)	80.35 km.p.h.
L. Hutzli (2½ Douglas)	74.33 "
F. Bally (2½ Hobart)	72.87 "

500 c.c. CLASS. (Set speed, 80 km.p.h.=50 m.p.h.).	
J. A. Newman (3½ Douglas)	102.27 km.p.h.
F. Guiguet (3½ Motosacoche)	100.56 "
C. Bouvier (3½ Norton)	95.23 "

750 c.c. CLASS. (Set speed, 85 km.p.h.=53 m.p.h.).	
C. P. Wood (3½ Scott)	88.23 km.p.h.
M. Aifter (3½ Scott)	87.38 "
F. Egger (4 Triumph)	86.53 "

1,000 c.c. CLASS. (Set speed, 90 km.p.h.=56½ m.p.h.).	
F. P. Dickson (8 Brough Superior) ..	105.88 km.p.h.
A. Rotherbach (8 Motosacoche)	101.12 "
E. Borsetti (8 Motosacoche)	101.12 "

1,000 c.c. CLASS. SIDECARS.	
(Set speed, 75 km.p.h.=46½ m.p.h.).	
R. Schorp (8 Motosacoche sc.)	90.15 km.p.h.
E. Moebus (7-9 Indian sc.)	87.80 "
E. Gex (8 Motosacoche sc.)	82.95 "

1,000 c.c. CLASS. CYCLE CARS.	
(Set speed, 75 km.p.h.=46½ m.p.h.).	
P. Honel (8.7 G.N.)	86.12 km.p.h.

Placings in the hill-climb are as follows:

250 c.c. CLASS	• Marks Lost.
A. Clerc (2½ Condor)	0

350 c.c. CLASS.

	Marks	Lost.
E. Williams (2½ A.J.S.)	0

The Salmson cycle car lost marks heavily in both tests.

THE F.I.C.M. CONGRESS AT GENEVA.

Spain now Represented. Lightweight Sidecars Discouraged in Next International Trials.

AFTER the conclusion of the International Six Days Trials the summer meeting of the International Federation of Motor Cycle Clubs was held at Geneva on the afternoon of the 8th inst. The delegates were first entertained to lunch by the Swiss Automobile Club, and then adjourned to the Mairie next to the club headquarters, where the congress was held under the able chairmanship of M. Jules Neher, a vice-president of the Federation. Eight countries were represented by the following: Count Bonacossa, Motor Club d'Italia; E. M. P. Boileau, Auto Cycle Union; A. V. Ebbelwhite, Auto Cycle Union; W. H. Wells, M. and A.T.A. (U.S.A.); J. Quincelet, Touring Club Suisse; H. Chaponnière, timekeeper, A.C.S.; J. Revelliod, secretary, U.M.S.; G. Paisant, Touring Club Suisse; C. Merle, vice-president, U.M.S.; H. Fels, Konk. Ned. Motoclub (Holland); M. Poncet, treasurer, U.M.S.; E. Gafner, U.M.S.; E. J. E. Maas, Konk. Ned. Motorwielryders, Vereeniging (Holland); Nils Kindberg, Svenska Motorcykel Klubben (Sweden); E. M. Lanuza, Real Moto Club d'Espana; F. de A. Delgado, Real Moto Club d'Espana; G. Longuemare, Union Motocycliste, de France; Jules Neher, president, Union Motocycliste Suisse; and T. W. Loughborough, general secretary, F.I.C.M.

Norwegian Delegates Absent.

The Chairman opened the meeting by welcoming the various delegates, and the Secretary then read letters of regret from the Hon. Sir Arthur Stanley, K.B.E., M.V.O., and the delegates from Norway who could not attend.

Out of the matters arising from the minutes, M. Maas (Holland) suggested that triptychs and carnets for international touring should be issued by motor cycle and not automobile clubs, as had been the case up to the present. The matter was, however, deferred. Count

Bonacossa (Italy) suggested that an extract of the minutes of previous F.I.C.M. meetings should be inserted in the F.I.C.M. Handbook, and this was agreed to.

The Spanish delegates, who attended for the first time, then explained the position in Spain, and stated that certain clubs refused to acknowledge the authority of the R.M.E. The Chairman pointed out that only the Real Moto Club d'Espana could be recognised.

Success of International Trials.

M. Revelliod then reported on the International Six Days Trial. There had been fifty-one entries, thirteen retirements, and many marks lost for reliability in the timed hill-climb, in the speed trial, and in the final examination of machines. There had been five special and twenty-nine ordinary gold medals awarded.

Mr. T. W. Loughborough, speaking as a delegate of the A.C.U., offered his heartiest congratulations to the U.M.S. on the organisation of the International Six Days Trial.

M. Neher suggested that the British riders should have come a week earlier, and tried the course.

Next followed a discussion concerning the rules governing the International Trophy. M. Revelliod suggested that members of the winning team should be provided by the F.I.C.M. with a miniature of the Trophy, and this was agreed to. It was finally decided to refer the question of rules governing the Trophy to a sub-committee consisting of Messrs. A. V. Ebbelwhite and G. Longuemare and M. Delessert.

Switzerland Again Next Year.

Then there followed a discussion regarding the venue of the next International Six Days Trial, and Mr. Wells rose and announced that the M. and A.T.A. would extend a hearty invitation

to the F.I.C.M. if the trial could be held in the U.S.A. He felt, however, that the expense entailed would be too great; but to show how he appreciated the recent trial, the excellent Swiss roads, and the magnificent opportunity they gave for testing motor cycles, he would feel safe in guaranteeing a team of American riders if the U.M.S. would consent to hold the trial in Switzerland again.

The general feeling of the meeting was that as the Swiss team had won the Trophy, the contest should again be held in that country, and this was finally decided. The dates selected were Thursday, August 3rd, 1922, to Thursday, August 10th, with a day's rest on the Sunday, and that no other International competition should be fixed between July 29th and August 19th, 1922.

The proposal in the name of Mr. A. V. Ebbelwhite, to the effect that a class for 350 c.c. sidecar machines should be re-introduced, met with violent opposition, and was not adopted.

A letter read from the A.C.U., suggesting that records made during long-distance races should be recognised, created a lengthy discussion, and it was at first felt that the smaller machines would have an unfair advantage, as they might be paced by those of greater cylinder capacity, but the suggestion was finally adopted.

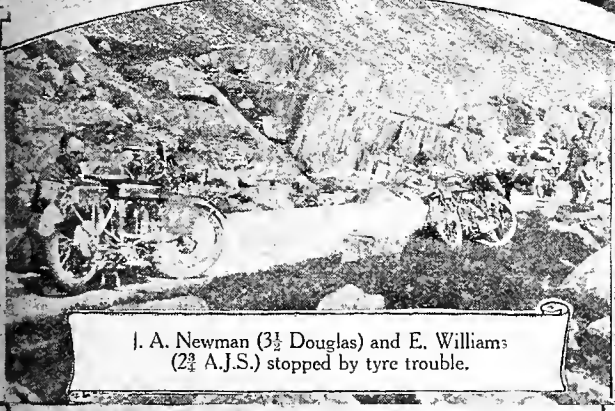

It was decided to hold the winter congress in Milan on December 14th.

Count Bonacossa then expressed his opinion that European records might be recognised, but it was agreed to postpone this matter to the next meeting. He invited entries for the Circuit of Brescia, 17 km. long, to be covered eighteen times, for motor cycles up to 500 c.c., on September 10th. Entries close August 20th, and should be addressed to the Secretary, the M.C.I., 16, Via S. Nicalao, Milan.

ROAD TESTS of NEW MODELS

THE 2½ H.P. SPRING
FRAME HOBART.

In addition to trials on "pot-holed" roads, the spring frame was severely tested by riding over deep cross-gulleys at a fair speed. This feat would have been impossible with a similar rigid-framed mount.

SPECIFICATION:

ENGINE: Jap 2½ h.p., 70×76 mm.
(292 c.c.)

CARBURETTER: Amac.

TYRES: Dunlop 26×2½ in.

FORKS: Brampton Biflex.

GEAR BOX: Sturmey-Archer, two-speed, clutch, and kick-starter.

TRANSMISSION: Chain and belt.

BRAKES: V-rim type on both wheels.

PRICE: £96.

CONSIDERING the undoubted advantages of the spring frame, it occasions some surprise on the part of many of our readers that the rigid type frame still continues to predominate. The reasons for this are many, and among them may be mentioned (1) the extra cost, which the majority of manufacturers do not feel justified in asking the public to pay at the present time; (2) the possibility of lateral play developing; (3) the extra weight; (4) the lower output due to the increased amount of labour for the additional units; (5) the difficulties of design; and (6) the majority of makers are not forced to consider the matter, because competitors who supply spring frames are in the minority.

Added to the above factors there is also the fact that there are now a large number of auxiliary suspension devices which successfully damp out road shocks so far as the rider is concerned. However successful these devices may be, they do not fulfil the proper functions of a spring frame in saving the machine from the ill-effects accruing from vibration.

The Question of Weight.

At a time when weight reduction is receiving the consideration due to it, the spring frame proposition is often dismissed on account of its extra weight; but, with a correctly designed spring frame, the weight should not exceed that of a rigid frame for the reason that, since the machine is not subjected to the same road shocks, the amount of metal need not be so great.

For years manufacturers have been piling on weight in strengthening up their frames by adding more metal. In many cases the strength is obtained by sheer mass of metal rather than scientific design.

Another factor which has retarded the development of the spring frame is the popularity of the sidecar. If a machine has to be used with an attachment, the springing problem becomes more difficult than is the case with a purely solo mount.

Simplicity of Design.

In this latter type the 2½ h.p. Hobart spring frame model is an excellent example of what can be obtained without undue complication and added weight. Here we have a machine which may be described as having three frames—(1) the front forks, (2) the main central portion, and (3) a rear frame carrying the driving wheel. This last-mentioned unit is pivoted just behind the gear box, and is connected to the top portion of the main frame, below the saddle, by means of parallel sliding members carrying coil springs. The illustration shows the principle upon which the springing works, and from which it will be seen that the distance between the driving and driven centres (the gear box pulley and the rear wheel) varies slightly with the movement of the frame. Although this movement is not very great, it would probably be sufficient to prohibit the use of chain transmission. With belt transmission this variation of centres may largely be disregarded.

Road Tests of New Models.—

We recently tried one of these machines for several days, and immediately the added comfort of the spring frame was apparent. Ordinary road shocks are damped out, and one feels no jar when passing over "corrugated" surfaces caused by industrial vehicles.

It was on returning to a rigid frame mount that the full advantages of the Hobart spring frame were most apparent, and an inspection was made to ascertain whether the tyres were not too hard.

The particular machine we tried was the one which successfully climbed Screw Road (the hill discovered by *The Motor Cycle* and described in our issue for May 19th), and was fitted with one of the new 346 c.c. J.A.P. engines and a special three-speed gear box.

Both $2\frac{3}{4}$ h.p. J.A.P. and $2\frac{3}{4}$ h.p. Villiers two-stroke engines are fitted as standard to these models, and almost every reader of *The Motor Cycle* knows the

excellent reputation enjoyed by each of these power units. As regards the machine itself, the spring frame has wonderful shock-absorbing qualities, but a fact not always realised by the designers of frame springing systems is that an excellently sprung and padded saddle is just as necessary as on a rigid frame. No car designer equips his well-sprung car with un-upholstered seats, for the main springing, if set to deal with major shocks between road surface and the dead mass of the machine, cannot be sufficiently sensitive to cushion the more delicate anatomy of the live load.

We even took the machine across country, traversing ridges and pavements, and, apart from the above criticism, it behaved in a manner that would surprise those who occasionally remark that spring frames are unnecessary.

Although affording a riding position several inches lower than the average, the sporting model spring frame Hobart has a well-balanced and pleasing appearance.

THE LURE OF THE MOTOR CYCLE.

SOONER or later the lure of the motor cycle steals upon almost every boy in his teens.

To his conservative parents it may still be a smelly abomination; but to him, whose eyes have been opened, it represents the summit of desire.

In a little while, after spending much time in the company of the "fellow who knows about these kinds of things," he learns to distinguish the different makes of motor cycles on the road.

After this, usually follows the catalogue fever, when the boy bombards the motor manufacturers with peremptory postcards demanding "your latest catalogue by return," and sundry information as to the running costs of the machine, which the makers, with their usual diplomacy, pass on to "our agents in your district, Messrs. Blank and Co."

By the time the average boy has read the catalogues carefully, noting even the name of the printer, he has usually decided irrevocably upon the machine he really intends to buy. He has only to talk the matter over with his best friend (who is usually as enthusiastic as himself) to find the inevitable fly in the ointment.

His best friend has it from a fellow who knows another fellow who knows a motor engineer that the

so-and-so machine has "no pep" on hills. Worse still, the such-and-such machine—his second favourite—has a nasty little habit of losing its flywheel; while its appetite for spirits (of the kind supplied by the Shell Co.) is not all that an ardent temperance reformer might desire.

Feeling thoroughly disillusioned, he has still to face the discouragement of his family circle, who are one and all bent on dissuading him from his mad enterprise.

The First Ride.

Then, on a great red-letter day in his life, his longed-for opportunity occurs at last. A perfectly ordinary young fellow, who must surely be an arch-angel in disguise, offers him a ride on his 'bus.

Almost too excited to mutter more than a curt "thanks," he sits astride of the machine, makes sure of the position of the various controls, and then, after a few ineffective kicks at the starter, he is really off.

After that the possession of a machine of his own comes as a matter of course. Life would not be worth living without one.

And the fellow who owns a motor cycle is a motorist for life. V.H.

CLUB NEWS

South Wales M.C.C.

In the time results of the open hill-climb at Catsash on July 21st, Norton riders obtained first place in each class they entered. Formula results have now been announced, and show successes by A.B.C. (three), Sunbeam, and New Imperial machines in the 500 c.c. and 1,000 c.c. events.

Leinster M.C.C.

The re-run reliability trial for the Patland Cup took place on the 6th inst., when five of the six competitors who tied with full marks at the open controls in the first competition rode over the original course. As on the first occasion, all of them were on time at the open controls, and the result was consequently decided by the secret check, which gave a win to T. E. Greene (24 Enfield).

York and District M.C.

Awards in the recent York-Edinburgh-York reliability trial were as follows:

SOLO CLASS.

SPECIAL CUP.—W. Turnpenny (3½ Rudge Multi).
GOLD MEDALS.—G. W. Dawson (3½ Rudge Multi), W. Atkinson (4 Triumph), G. H. Eastwood (4 Triumph), G. A. Reed (3½ Scott), G. E. Jackson (3½ Beardmore-Precision), and R. A. Wilson (2½ Blackburne).
SILVER MEDALS.—E. T. R. Goodacre (Coventry Eagle) and J. Ford (F.N.).

SIDECAR CLASS.

SPECIAL MEDALLION.—W. Marriott (4 Norton sc.).
GOLD MEDALS.—A. O. Brett (6 Coventry Eagle sc.), H. Pattinson (8 New Imperial sc.), E. Bray (7 A.J.S. sc.), W. Westwood (4 Triumph sc.), and N. Jordan (3½ Beardmore-Precision sc.).

Dublin and District M.C.C.

Results of the one day trial, held on the August Bank Holiday, are announced as follows:

WALKER AND FREEMAN CUPS AND GOLD MEDAL.—Dene Allen (4 Norton sc.).
S. L. HUTCHINSON PRIZE, SPECIAL LIGHT-WEIGHT PRIZE, AND GOLD MEDAL.—T. Green (2½ Enfield).

GOLD MEDALS.—P. H. Hulse (4½ B.S.A.), T. Slevin (2½ Velocette), G. A. Daly (4 Triumph), J. A. Carville (4 Triumph), F. Holmes (8 Enfield sc.), Stan. Woods (7-9 Harley sc.), J. McEntaggart (7-9 Reading-Standard), P. Smith (7-9 Indian sc.), R. Murphy (4 Triumph), H. McAllister (4 Triumph sc.), Fergus O'Connor (3½ Norton), C. W. Johnstone (2½ New Scale), and A. Carton (3½ Norton).

SILVER MEDAL.—S. J. Redmond (4 Indian Scout).
BRONZE MEDALS.—John Adair (4½ B.S.A. sc.), T. Woods (6 Martinsyde sc.), C. Maguire (4½ Humber sc.), E. McGrath (6 A.J.S. sc.), and T. Hassett (4 Norton).

Aug. 21.—Hellenburgh M.C.C. Speed Judging Competition.

Heaton Moor M.C.C.

During August Holiday week the club held a reliability trial over an exceedingly sporting course of about fifty miles. The winner of the 500 c.c. class was A. Bains (P. and S.), with 255 marks out of a possible 300. The winner of the unlimited class was H. Cheetham (4 Triumph) with 249 marks. Incidentally, the winners were the only two competitors credited with clean ascents of Saltersford Hill, the tit-bit of the trial.

Castleford M.C.

Results of the recent speed trials held at Byrom Park are as follows:

250 c.c. SOLO.—1, B. Ward (2½ Silver Prince).
250 c.c. SOLO.—1, A. G. Ridgeon (2½ Douglas).
500 c.c. UNLIMITED.—1, A. Campey (3½ Sunbeam).
500 c.c. SOLO.—1, C. Keyzer (3½ Sunbeam).
SIDECAR (UNLIMITED)—1, C. Shaw (6 Enfield sc.).
Campey and Keyzer tied for fastest time at 69.7 m.p.h.

Neath and District M.C.

Owing to a dispute over the results of one class, the placings in the speed trial held at Margam Park on the 28th ult. are only now available for publication:

250 c.c. NOVICE CLASS.—1, Alf. Williams (2½ Diamond), 33½s.
250 c.c. GENERAL CLASS.—1, Alf. Williams (2½ Diamond), 35½s.
350 c.c. NOVICE CLASS.—1, Alf. Williams (2½ Diamond), 33s.
350 c.c. GENERAL CLASS.—1, Ware (Coulson B), 33½s.
500 c.c. NOVICE CLASS.—1, H. W. Rice Evans (3½ Sports Sunbeam), 28s.
500 c.c. GENERAL CLASS.—1, H. W. Rice Evans (3½ Sports Sunbeam), 28½s.
750 c.c. NOVICE CLASS.—1, H. W. Rice Evans (3½ Sports Sunbeam), 28s.
750 c.c. GENERAL CLASS.—1, Ivor Thomas (3½ Sports Sunbeam), 27½s.
* Fastest time of the day.

Cardiff M.C.

Winners of the various classes in the recent speed trials, described in *The Motor Cycle* last week, are as follows:

275 c.c. SOLO (NOVICES).—H. Harris (2½ New Imperial-Jap).
350 c.c. SOLO (NOVICES).—N. Mitchell (2½ Verus).
275 c.c. SOLO (GENERAL).—H. Harris (2½ New Imperial-Jap).
350 c.c. SOLO (GENERAL).—L. Davies (2½ Coalson B).
UNLIMITED SIDECARS (NOVICES).—G. Gibson (10 Henderson sc.).
SIDECAR CHAMPIONSHIP.—Jack Thomas (3½ Norton sc.).
500 c.c. SIDECARS (GENERAL).—Jack Thomas (3½ Norton sc.).
750 c.c. SIDECARS (GENERAL).—R. W. Hill (4 Precision sc.).
UNLIMITED SIDECARS (GENERAL).—H. Davies (8 Brough Superior sc.).
LADIES' HANDICAP.—Miss I. Fountain (2½ Levis).
500 c.c. SOLO (NOVICES).—J. Jenkins (3½ Norton).
750 c.c. SOLO (NOVICES).—W. Buckler (3½ Scott Squirrel).
UNLIMITED SOLO (NOVICES).—J. Jenkins (3½ Norton).
500 c.c. SOLO (GENERAL).—W. Rice Evans (Sports Sunbeam).
750 c.c. SOLO (GENERAL).—W. Rice Evans (Sports Sunbeam).
UNLIMITED SOLO (GENERAL).—W. Rice Evans (Sports Sunbeam).

A STRENUOUS TRIALS ROUTE.

On the Course of the Recent North Wales M.C.C. Open Reliability Trial, which included Bwlch-y-Groes and Alt-y-Bady.

(1) W. Edwards (4 Powell) on easy going near Dolgelley.

(2) B. Bladder (8 New Imperial sidecar) experiencing wheel spin on Alt-y-Bady.

(3) On the top of Bwlch-y-Groes. A. Welsh (4½ B.S.A.) passing another competitor in difficulties.

(4) R. Russell Bromley (3½ Sunbeam), near Tyn-y-Groes, on the last non-stop section in the morning's route.

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Collated by "Vedette."

A SMALL runabout, somewhat on the lines of the Scott Sociable, has recently been announced in the United States by the Martin Rocking Fifth Wheel Co., Springfield, Mass. It is a diminutive three-wheeler with a "bath tub" body accommodating two passengers. It is simple and economical, and it is said that the price will be exceptionally low. It has a flat-twin four-stroke air-cooled engine of 60 x 51 mm. bore and stroke (334 c.c.), which drives the left rear wheel. The clutch is mounted in the camshaft gear thus providing an initial reduction of 2 to 1. The trans-

frame connecting the wheels is unsprung, and the machinery carried on this frame is also unsprung—in fact, the body alone is carried on springs. It must be agreed, however, that in appearance it leaves something to be desired.

A simple type of three-wheeler of American origin. It is somewhat reminiscent of the Scott Sociable, although a very different engineering proposition.

The miniature flat twin four-stroke on the curious three-wheeler here described.

I observe that the Tynesider Seat Works, Union Street, North Shields, has now introduced an auxiliary seat for sidecars, the price of which is £1 9s. 6d. The illustration given is self-explanatory.

A Tynesider folding sidecar seat designed to accommodate a child.

mission is located close to the wheel and provides two speeds forward. The engine is started by a kick-starter as is common in motor cycle practice. All controls are effected by the Bowden wire system, this system being used for the shifting of gears, operation of the clutch, brakes, magneto, carburetter, and, in fact, all parts under the control of the operator. The steering is by lever. The wheels are arranged on the sidecar plan. It resembles the sidecar in that the triangular

Passenger Machine Topics.—

Recently, during a welcomed downpour of rain, I passed on the road the manager of a prominent motor cycle concern who was driving his touring outfit officewards. He had a passenger in the sidecar, who was holding the apron in front of his face as a protection against the grit thrown off by the front wheel—yet the makers continue to fit mudguards which inflict this punishment on passengers, and do not fit a screen as standard.

* * *

Some sidecar manufacturers are seriously considering the luggage problem. It is very satisfactory to note that slowly but surely the unsprung luggage grid is disappearing, and, in addition to the large number of sidecars now carrying the grid on the body, there are quite a number whereon the grid is discarded altogether in favour of a luggage locker. Usually these compartments are at the rear of the body, but at least one firm, the Woodside Motor Co., 415, Station Buildings, London, S.E.25, has arranged a luggage compartment in front. This sidecar is called the Kangaroo. In the front portion is carried a specially-designed suitcase, which fits accurately, and is held in position by straps. It is sufficiently spacious to carry luggage for two people for at least a week-end. Every available inch of interior space has been made use of, as in the back locker there is room for carrying two petrol tins in special carriers. Careful study of the seating position has enabled the designers to utilise this space under the dash for luggage-carrying without appreciably cramping the passenger's legs.

Illustrating why this sidecar is called the Kangaroo; the passenger, leaving the sidecar, lifts out the special suitcase carried under the dash. Observe how neatly the hood folds away.

The undoubted popularity of the big sidecar outfit has been the means of inducing several firms to consider closely the cycle car proposition. It is prophesied that next year quite a number of small four-wheelers will be in direct competition with the sidecar *de luxe*—in fact, it only requires a little more lenient view on the part of the licensing authorities to give the four-wheeled cycle car a decided impetus. Among the latest firms to enter the cycle car field is Mr. G. W. Wadden, Jessamy Road, Weybridge, Surrey. Illustrations of his cycle car appear on this page. The engine fitted is an 8 h.p. J.A.P., while the transmission is all chain, two sprockets being mounted on the engine-shaft, and two others on a cross-shaft, from which the drive is taken by other chains to a live rear axle. The gears are changed by means of dogs on the inner sides of the cross-

shaft sprockets. In the centre there is a single plate clutch. Steering is by means of cable and bobbin, while the springing is by coil and leaf springs.

* * *

Why, and how, do one or two of the front-rank sidecar drivers succeed on the most freakish of hills when others driving identical

outfits are hopelessly beaten by gradient, plus wheel-spin? Assuming that the machines are exactly similar, and that the man who fails is quite an experienced trials rider, the question becomes even more puzzling. Recent observations, however, convince me that the secret lies in systematic "bouncing" on the part of the driver and passenger. Full throttle, low gear, and a few minutes' synchronised gymnastic display—and a novice might well hope to surmount Alt-y-Bady at his first attempt.

Showing the staggered seats and quite graceful outline of the 'Simplic' cycle car. The name is an index to its characteristics.

Front springing and power unit. A very "dummy" radiator forms part of the bonnet.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PROTECTING A DISABLED LEG.

Sir,—I read "Dislip's" letter with considerable interest, as I am in a similar position myself. I have, however, constructed a strong and very satisfactory shield, similar to the one "Dislip" refers to, on a lightweight Clyno.

Should "Dislip" care to have further particulars no doubt the Editor would forward him my address.

Bridlington.

DISLIP TOO.

THE CYCLE CAR OF MODERATE PRICE.

Sir,—It is with much interest that I read the article by "Ubique" on the above, and the letter of "Dumpling," in a recent issue, is also instructive.

At the same time, it must be borne in mind that the big twin engines, especially of the V type, are neither the most pleasant nor the most economical engines for the ideal cycle car. Thousands of sidecar enthusiasts—who, after all, are the people most likely to be interested in cycle car developments—regularly take two adult passengers and a child, and often luggage as well, anywhere, with a 4 h.p. engine; a 6 h.p. machine seems to be well on top of its work, and even with such a load is practically a "top gear 'bus" anywhere.

Therefore, why get a larger engine? Surely it is only necessary in order to counteract the inefficiencies of the transmission layout, etc. No, sir, I think we shall find that the real cycle car, when it does come, as it must before very long, will not require more than 5 h.p. or 6 h.p. at the outside, and most probably even less. Given a transmission free from losses, as is that of the modern chain-driven motor cycle, a cycle car will be more efficient even than the sidecar outfit, because it will eliminate the drag of the sidecar, which is quite an item, as experiments have shown. My specification would be a flat twin or four-cylinder engine up to 5 h.p. or 6 h.p., three-speed gear box, and all-chain drive, with a weight to power ratio about the same as in the high-class heavyweight sidecar of to-day.

Once our designers realise that the rider of a sidecar outfit requires just as adequate weather protection as his passenger now gets, we shall soon see the arrival of the new machine, the real cycle car, but it must be capable of taking the same loads and running as cheaply as does the popular sidecar.

WILLIAM A. WEAVER.

Managing Director, The Coventry Victor Motor Co., Ltd.

UNITY OF CONTROL.

Sir,—Whilst fully appreciating the points made in your article on "Unity of Control," I should like to look at the matter from another point of view.

Motor cyclists and motor car owners cannot be absolutely in sympathy from the nature of things.

Let me put a case. Say the A.C.U., A.A., and R.A.C. are one. In matters of legal advice, assistance, etc., I should think the present A.A. organisation would predominate. A financially weak motor cyclist is smashed by a financially strong road hog in a big car. There are no independent witnesses. Both are members of the amalgamated body of control. Who is the body going to help? I am a member of both the A.C.U. and the A.A. I am in a somewhat similar position to the case indicated above. One organisation is very lukewarm in its action; the other is doing all it can.

I certainly maintain that it is in the interests of motor cyclists to have an organisation of their own. There are

a large number of people whom the war has put in a position to be big car owners, who are not wanted in an organisation that looks after the sporting side of motoring.

Festiniog.

UNDER 8 CWT.

Sir,—Two years ago I was a member of the A.C.U., but when it raised its fees I did not rejoin.

Since that date I have received over ten letters (including those from the A.A., of which I have never been a member) requesting me to rejoin. I have replied to none of these letters, and have made up my mind not to join again until these two bodies unite and form a really powerful and useful body. Every one of your readers realises, I am sure, the great work which could be done by an efficient, united body. Till then the circulars and letters which continue to come will remain unanswered. But why, oh why, do they not join forces?

P. S. CHAMBERLAIN.

Sir,—Your recent leader on the subject of the A.C.U. shows your usual dignified handling of matters affecting the higher politics of the sport. But may I be permitted to suggest that, in accounting for the reduced membership, you miss, if not the point, at any rate a material point.

During last year the club, of which I had been a member of the executive for ten years, submitted a strongly-worded resolution to the governing body, calling on them to protest against the ridiculous and inequitable system of taxation then threatened. The same course was, I believe, adopted by other clubs. The outcome was that the R.A.C. gave the whole motorists' cause away, allowing Major Stenson Cooke, of the A.A., alone to raise his voice in protest. The obviously consistent course in the case of myself, and, I believe, in that of many others, was, though reluctantly, to sever all connection with any body directly or indirectly associated with the R.A.C.

It is to be observed that while the A.C.U. loses 40% of the membership, the A.A. forges ahead without looking back. *I erb. sap.*

Let us amalgamate these conflicting bodies by all means; but, bear in mind that the interests of the poor motor cyclist cannot, and will never, be safe in the hands of the plutocrats of Pall Mall.

BERNARD SIFFKEN, B.A., F.R.G.S.

MANUFACTURERS AND THE A.C.U. SIX DAYS TRIALS.

Sir,—The rules of the A.C.U. Six Days Trials have been so carefully drawn up that one hesitates to criticise; I offer suggestions. That a certain standard should be reached in each test is admirable. A serious defect in one point spoils all-round excellence, and may reasonably spoil the chance of a gold. But is not the standard required too high? Would not a standard of 75% be sufficient, provided that a 90% standard were required in the aggregate?

To take an example, three marks lost in "silence" disqualify, whereas forty marks lost in "reliability," "speed," "oil and petrol," and "final condition" do not. As regards the silence test, it is obvious that the judges cannot discriminate between twenty varieties of noise. Would it not be fairer to have three grades only, "silent," "fairly quiet," and "noisy," and to disqualify the last only, giving bonus marks for the first? The machines might be (should be, I think) tested before the run. The riders could then retire and save trouble and expense. Also, it is possible for the most silent machine to develop a temporary noise,

which might happen by ill-luck at the moment of testing, but might not persist.

As regards the final test of "condition," I think you mistook the exact meaning of the rule.—I read it that a penalty will be imposed only in cases of actual breakage and bad wear and tear; and only then at the discretion of the judges—not that the judges have unlimited discretion as they had in a former trial. Personally, I think that the severe test at Brooklands would be sufficient, but it might seem unfair that a machine which survived the speed test only as a wreck should not be penalised. It depends on whether the Brooklands test is regarded as part of the trial, or whether it is regarded as a test of condition at the end of it. If it is the latter, obviously no further test is needed; if the former, the machine must be tested in some way after the trial. H. GEORGE MORGAN.

Sir,—There are several points in connection with your interesting article on the Six Days Trials which I feel might be amplified in such a manner as to put a different interpretation upon them. I hope that in writing I am not taking the words out of other people's mouths, who are possibly more vested in the necessary authority than myself. In the first place, I was under the impression that the Six Days regulations were got out largely in conjunction with the manufacturers themselves. On the question of silence the manufacturers asked that the ear might be used to judge and mark the machines. In your notes you state that the makers do not like to be marked on points which depend upon personal opinions. Surely if the relative silence of one hundred machines is going to be judged, the personal element has been introduced by the manufacturers asking for the ear only to be the deciding factor, and it must be obvious to everyone that the result of this ruling will be that *no machine can be penalised unless it is noisy beyond all reason.*

On the question of marks being deducted in the final examination at the discretion of the judges, I should have thought the number of gold medals awarded last year would have removed any apprehension on this score. If actual marks were laid down as deductible for each broken spoke, the net result would be unfair to the competitors. We might have the case of a machine with one broken spoke having marks deducted, whereas a machine with every spoke thoroughly loose would go scot free. I merely quote this as an exaggerated example, to show that, as in the past, there is anything but a desire on the part of the A.C.U. to be antagonistic to anyone. This at least is my humble opinion, and if you realised the extraordinary amount of care and thought which is put into trials regulations, and the manner in which expert riders and designers are consulted to ensure general fairness, you would appreciate that many of the points raised by critics have not only been considered at great length, but are actually here to protect the very people who complain.

Surely every trial that has been held has been not only to

support the private user, but also to help the manufacturer to demonstrate the best points of his machine. A trial does not exist merely as an advertising proposition for every machine, but only for the good motor cycles, and it is interesting in this connection to notice that almost every admittedly excellent motor cycle has done well in every A.C.U. trial.

There is one final point, which I suggest has been misquoted. I have never personally seen any Six Days Trials in which any official wished to criticise design, and I am quite certain that, should such an occasion arise, the stewards of the meeting would very soon stop such ridiculous behaviour on the part of those primarily responsible for the deduction of marks. What I think you have forgotten is that design has a nasty habit of affecting results. If twenty machines finish a trial with stirrup front brakes hopelessly inoperative, marks are deducted because the brakes are not in perfect working order. No marks are deducted because the design of the brake is such that this bad result might have been foreseen, and the fact that design might have been responsible for the bad result has nothing to do with the case whatsoever.

Surely it is evident that if a "bad" design finishes a hard trial in perfectly good order the design ceases to be bad.

A. M. LOW, A.C.G.I., M.I.A.E., etc.

—AND TYRES AT £6 PER PAIR?

Sir,—As a motorist for nineteen years, and a motor cyclist for the last eight or so, I write to suggest what I believe to be a new type of race. The Doncaster and District M.C.C. (of whose committee I am a member) held its own speed trials recently over the measured half-mile, which distance was covered by several members at over sixty miles per hour.

The start was a flying one, and so was the finish, and no doubt this kind of competition has its uses and its thrills. But of how much more use would such a race be were it decreed that the finish were to be a standing one, right on a mark not more than 6in. wide? Such a competition would serve to bring honour to the man who had a machine that was not only fast, but fitted with good brakes, and who showed the maximum of skill and judgment in using them. It would encourage, as no other race that I have heard of, the "safety first" idea, of which all decent people are supporters; and those who are in the habit of riding as if there were no such things as brakes, or no occasions for their use, might learn therefrom a very valuable lesson. Finally, the spectators would have the satisfaction of cheering or jeering, as the case might be, each competitor as he landed and remained where they could have a good look at him, instead of dashing past into obscurity unidentified. Doncaster. CANTAB.

[While an excellent idea in many ways, it does not seem likely that such an event would attract the private owner competitor in any large numbers. What do readers think?—Ed.]

FOR LIGHT DELIVERY.

BRITISH BIG TWINS—FROM VARIOUS VIEWPOINTS.

Sir,—I have not been a reader of your interesting journal for ninety-nine years, but I have seen you cry out on more than one occasion for a fast British big twin, and it is my opinion we never will have one until the big twin is given a sporting chance in open speed trials. For instance, take any open speed trial and look at the programme, and we find a "hot stuff $3\frac{1}{2}$ h.p." running no fewer than seven or eight times. Its entrant has a run in which to get to know the particular track, and seven more runs to make other adjustments in. Then comes the fixed geared big twin, with one solitary run in which to find out everything—when it is too late. Where is there a rider who cannot knock seconds off his first run on any machine?

Take the standing start classes, which prove nothing much, only making an event much too lengthy, in my opinion; what chance has a rider pushing his 3 cwt. of metal by himself for about twenty yards against a geared " $3\frac{1}{2}$ h.p." that could be half way down the track by the time the big twin gets his first shot? Instead of giving one man seven or eight runs and another man one, I would like to ask, why not give every man two runs, and his best time to count in all the classes he likes to enter for. Then, and only then, will one see how the big twins have been running against great odds?

D.M.C.

Mansfield.

Sir,—Looking through all that has been said of late in the editorial and correspondence columns of *The Motor Cycle* on the subject of the introduction of a British super-twin, which should equal, and, if possible, supersede, its American brethren in speed and power, it strikes me that none of the writers has touched upon the commercial and financial side of this problem. Yet I am sure it will prove to be more difficult for the British manufacturers to capture the business done in big twins, especially in overseas markets, than to solve the technical problems connected with the construction of a mount which can lap the Americans on the Brooklands track. And, after all, the big sales and the subsequent profits are the things that count in the motor cycle trade, and record breaking is only one of the means used in the race for financial success!

As far as Holland is concerned, the bulk of the motor cycle business is done here by the American manufacturers. Notwithstanding the fact that they have the rate of exchange against them to an extent of 30%, the Hendee Manufacturing Co. are selling here the Indian Powerplus, fully equipped with spring frame, electric head and tail lamps, electric horn, separate magneto and dynamo, at the price of f. 1,525, whilst an electrically-equipped British motor cycle of only 6.7 h.p., and with a sprung saddle pillar as a substitute for a complete spring frame, costs here not less than f. 2,150.

Now, I am the first man to grant that the enamel and plating of British machines are generally superior to the finish of the Indians, but is this worth a sum of more than £50 to a rider who wants speed and power and who goes by the actual results obtained in the big trials?

It is not only necessary to offer to the public the right goods, but especially, nowadays, the right price is also wanted, and in this respect America is constantly making a big score. If the British manufacturers could see the number of American twins which make their appearance on the roads even in a small country such as Holland, they would be disagreeably surprised at the volume of business which is constantly slipping past them. The only cure is a thorough revision of the English prices along the whole line.

It would interest me to learn the price of the Brough Superior. If its makers want to find a market here in competition with the Indians, Harleys, Reading-Standards, and other Americans, their price should not be above £140, full electric equipment included.

F. H. LAMPEN.

Amsterdam.

[Equipped with acetylene lamps, horn, etc., the Brough Superior sells at £175.—Ed.]

Sir,—With reference to the two letters on this subject, on page 111 of your issue dated July 28th, may I offer the following observations?

May I suggest to Mr. G. Wake that he is not in possession of all the facts in connection with the production of the Brough Superior, otherwise he would hardly have penned the letter he has?

B12

The Brough Superior was designed and the first machine produced in less than eight months. That it achieved instant success is now a matter of history, and to say that it is easily the most coveted machine of the day will not be disputed by anyone who is not prejudiced.

I know that all successes in competition are on absolutely standard models, because no other models are made.

Bearing in mind that it is an expensive matter to produce an entirely new type of machine, and that the works are unable to cope with the demand, it is small wonder that the machine is not represented in such expensive events in time and money as the Brooklands five hundred mile race.

After all, who is the man who should be satisfied first? Is it the man who rides a machine, or the armchair critic who theorises and possibly knows very little of the facts of the case?

Personally, as a private owner and a more than satisfied user of the Brough Superior every day in my business, I can safely say it is the most reliable and satisfying of a series of motor cycles extending over the twenty years I have been using them. I have ridden my machine over 11,000 miles since March 2nd with the solitary replacement of a valve spring. In addition to using the machine for business, I have also ridden successfully in three long-distance trials, and I think any unprejudiced person will agree that the machine still looks practically as when new.

HAROLD KARSLAKE.

SPEED TRIALS AS A CURE FOR INSOMNIA!

Sir,—I note in your issue for the 4th inst. a letter from the Managing Director of New Imperial cycles regarding the Clipstone Drive speed trials, in which he very kindly volunteers several suggestions for the improvement of these events. All his suggestions are grand, but impracticable, except under the most favourable conditions.

To read such criticisms as your correspondent's is very disheartening to those who have worked assiduously for a month to try and please, though I am convinced that the production of this effect was very far from your correspondent's intention, and that he has no egoistic grievance. In the first place, it is rather wild to state that up to five o'clock only half a dozen competitors had been along the course, as in the first class alone there were twice that number of competitors. Again, several well-known riders told me previous to the event that they did not intend entering the sidecar classes. Yet I confess that solo classes for machines of the same capacity as, say, the speedy New Imperial, could very well have been sandwiched as the ham between the sidecar bread had it occurred to the promoters. This is a matter which is certainly worthy of attention. A great many machines of 500 c.c. and upward enter solo and sidecar, and the alternation of their sidecar entries with the 350 c.c. solo would certainly ensure that a few more got an early show, though the arrangement would leave the Senior T.T. winner perspiring as he detaches, fixes, redetaches and refixes on to his A.J.S.

Your correspondent continues: "There should be a definite starting time for each event or class." Excellent indeed, provided all goes well. There was a good deal of delay through the very heavy breeze making the start and finish banners unsafe, and the stewards very wisely held up the proceedings until they were in order. These are unlooked for occurrences, and "the best laid schemes of mice and men."

I am prepared to admit that on the general question your correspondent is quite right—that things can be improved. But the key to the whole trouble is nothing more than the multiplicity of classes. Mammon is once more at the root of the whole evil. But no such fabulous sums are made out of these events as some would have us believe. For Clipstone, the total value of the prizes alone approximates to £160, and this takes some collecting in entry fees. Hence the number of classes to cover other expenses also. Personally, I should welcome the breakdown of the gold medal tradition, and hail the advent of the day when there was a uniform entry fee of 5s. at most for all classes of rider, with some more modest recognition of a win. This would do much to remedy what admittedly is making the running of a trial a strain on, instead of a pleasure to, the organisers. At the same time, with a diminution in the number of classes, I should not like to see things pushed through. This, to my mind, savours too much of business, a trade, an advertisement. Let things be taken a little more gently, with an interval or two for a convivial quaff and a chat. There is no reason

whatever why the sporting side of motor cycling should be so hopelessly divorced from the social. This cleavage, which certainly exists to-day, is doing much to weaken the united front that motor cyclists can present, and I am convinced that it is enfeebling club life. I feel confident that, if things could be taken a little more leisurely on the lines I have broadly hinted, it would once more set the blood coursing freely through many a club body, and be the means of increasing its vitality twenty and thirtyfold.

K. S. TOPPING,
Hon. Sec., East Midland Centre.

FROM A MECHANICAL ENGINEERING POINT OF VIEW.

Sir,—Allow me to reply to the various criticisms of my letter with the above heading.

In regard to your editorial comment on the crank and connecting rod type of transmission, it will perhaps make matters clearer if I explain the particular design I had in mind, which design may have been experimented with years ago, but, in view of recent developments, might possibly be worth reviving.

Fig. 1.

It consists of a combined transmission and gear box as shown diagrammatically in fig. 1. The rotation of the engine-shaft is transmitted by two connecting rods and cranks, or eccentrics, to the pinion-shaft C. The master connecting rod also rotates two crankshafts on which are the pinions D and E. It is seen that all three pinions are rotating at engine speed, and by engaging any one pinion with the gear wheel fixed on the back-hub three speeds may be obtained. The clutch and spring cush drive would be in the outside flywheel. If the gear ratios are $\frac{5}{1}$, $\frac{4}{1}$, $\frac{3}{1}$ = 4, 7.7, and 12 to 1, pinion D would have seven teeth, which would be quite satisfactory provided the "Maag" form of gear tooth were used, as this form of gear tooth has the advantage that as the number of teeth decreases, the strength of the tooth increases.

The two connecting rods could be perfectly balanced, and, as such, would tend to smooth out the engine impulses. The whole transmission would require the minimum attention. With regard to the Pelican Engineering Co.'s remarks re hub bearing design, may I point out that it is usual to choose all bearings by their load-carrying capacity, not by their outside diameter; also, existing hubs designed for cone bearings are not suitable housings for a high-class self-aligning ball bearing. On the whole, they are not rigid enough nor dirt or moisture proof.

I should like to know how they fix the races to take the end thrust, and also whether the manufacturer of that particular ball bearing guarantees them when so fitted.

The following are a few extracts from makers' catalogues:

"It may be remarked here that ball and roller races should be regarded by designers as hardened steel tracks. They are, particularly in the light types, readily distorted, and require to be supported in substantial housings, accurately machined."

"The importance of excluding dirt and water cannot be over-rated."

"We recommend as a lubricant a grease (chemically neutral) of about the consistency of thick vaseline. It is, however, of the utmost importance that all hardened and ground steel surfaces should be in contact with grease, as they quickly rust if this is not done. For these reasons we recommend that all housings containing ball bearings should be fitted with a Stauffer or similar lubricator, so that a little additional grease can be forced in as occasion demands (or a grease gun used)."

"Under proper conditions the bearings will run for years without showing wear."

Thus, to be efficient, a ball-bearing hub must satisfy the above conditions. The principles on which I should design a front hub for a lightweight are shown in fig. 2.

It will be seen that an internal expanding brake is incorporated. It is no use having an efficient and weather-proof hub without having the front brake to match, and this is the only type of brake which can be made efficient, weatherproof, and neat in appearance.

Fig. 2.

In regard to the use of Timken bearings in hubs, I do not think it is the best design to include the adjusting nut for the inner race as part of the "circuit" between the axle nuts. The fork ends should tighten against a solid shoulder on the axle on each side.

DRAUGHTSMAN.

Salford.

SUMMARY OF CORRESPONDENCE.

Two readers wish to thank good Samaritans—a driver of a G.P. Morgan, "O.H. 4589," on the Bristol-Bridgwater Road, and a Douglas rider on the Maidstone Road near Ightham—who respectively helped them in road troubles.

"One who has tried a few" praises the capabilities of his 1914 Clyno two-stroke lightweight.

Riding from Kilcreggan to Couplort, a Glasgow reader, "Indian," records that he was stopped in a ten-mile limit by a plain clothes policeman whom he knew was "off duty."

Replying to "C.C.C.'s" letter on "Air-cooling and Oil-cooling," Messrs. W. H. Frost, Burnley, point out that their system of lubrication provides "a constant return to the crank case of cool and clean oil."

Referring to the letters on the subject of carrying petrol tins on sidecars, "J.H.R." recommends the Greenwich petrol can carrier made by Messrs. Duffet Bros., 78, Gt. Jackson Street, Manchester.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"
The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."
New Edition. Just Published. Price net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."
A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

"MOTOR CYCLE REMINISCENCES."
By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.
Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.
Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.
With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Todor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

OILING A TWO-STROKE.

? My 2½ h.p. New Hudson two-stroke (1916 model) has a plain sight drip feed, but does not get enough oil. Should there be a non-return valve, and, if so, where should it be fitted? Would it improve matters if I substituted a plain oil pipe without drip feed?—E.P.

There should be a non-return valve between the crank case and the drip feed, unless the oil pipe is led into the induction pipe, in which case the diaphragm valve in the base of the drip sight chamber will be sufficient. In order to ensure efficient working, make quite sure that there are no air leaks either at the unions or at the joint between the sight glass and the drip feed body. You should not fit a direct pipe with this particular drip feed. If the oiling is insufficient, add a small quantity of oil to the petrol.

VIBRATION AND TESTING BEARING WEAR.

? When running at any speed, the footboards of my machine vibrate to such an extent that it is almost impossible to keep my feet on them. In one of your articles some time ago the writer says, "Get the piston at the end of its stroke, and then test for bearing play by rocking the flywheel." Could you tell me which end, and in the case of a twin which piston? Surely even then an attempt to vibrate the sprocket, if successful, would only show slack in the main crankshaft bearings.—J.C.

It does not really matter whether the piston is at the inward or outward end of the stroke, although it is probably easier to test the state of the bearings when it is at the outward end. You appear to have misunderstood the process. By rotating the sprocket alternately backwards and forwards, the piston is correspondingly drawn rapidly up and down over the top of the stroke, changing its direction each time the rotation of the sprocket is reversed. The play in the connecting rod bearings is, therefore, very noticeable, as the piston lags behind the connecting rod when the reversal of direction takes place. This test should be carried out with the engine warm, so that the oil is thinned, and thus offers no resistance. Play in the main bearings is detected by lifting the sprocket vertically. Probably the engine is not rigidly held in the frame. Secure the engine fixing bolts or replace them with new ones if they are worn.

B16

CLUTCH SLIP AND TOP GEAR HILL CLIMBING.

? (1.) Large chips are missing from two of the radiating fins of my W.D. Triumph. Can this be remedied in any way? (2.) The clutch slips slightly on hills. I have taken it down, and find that an extra fabric ring has already been added. The rings are free from grease, and I have tightened the screws as far as possible, without improvement. What do you recommend to effect a cure? (3.) With the throttle fully open on hills, the air has to be only threequarters open. Is this correct? The jet is 28. (4.) Is it good for the machine to attempt to climb such hills as Kop Hill, Princes Risborough, on top gear?—C.P.

(1.) The radiating fins cannot be repaired very readily. (2.) The only thing you can do is to add still another Ferodo ring, and then release the tension of the springs as required, or renew the springs entirely. (3.) With this size of jet it would be

necessary to close the air slightly when hill-climbing. With a larger jet, No. 32, the carburettor is fully automatic but the consumption will be a little higher. (4.) Climbing steep hills on top gear will do no harm to the machine provided you do not allow it to "thum". It is much better, however, to change down into second gear rather than to hang on to top when the speed falls below about 15 m.p.h.

DOES CONSUMPTION IMPROVE WITH USE?

? Does one get more miles per gallon from a brand new machine, or will the m.p.g. be more after the machine has run, say, 500 miles, and been taken down and decarbonised?—B.W.

In all probability the petrol consumption would be appreciably better after the machine has run 500 miles, as it will then be "run in," and all the parts working smoothly and with a minimum of friction.

SEVERE WEATHER CONDITIONS IN NORTH WALES M.C.C. OPEN TRIAL. G. F. Burns (3½ Sunbeam) in the rain on the summit of Bwlch-y-Groes. He also made a fine ascent of Alt-y-Bady.

READERS' REPLIES.

RECOMMENDED ROUTES.

SIDECAR WORK FOR AN ESSENTIALLY SOLO MOUNT.

My mount is a $3\frac{1}{2}$ h.p. V twin N.U.T. geared 4 to 1 on top. I want to reduce this to 5 to 1 to pull a sporting sidecar. (1.) Is the latter ratio correct for sidecar work? (2.) Which sprocket should I change, engine-shaft with fifteen-teeth or countershaft with thirty?—J.J.L.

(1.) A 5 to 1 or $5\frac{1}{2}$ to 1 top gear would be the best for sidecar work. Your machine, however, was designed essentially as a solo mount, and you may be disappointed with the results when a sidecar is fitted. (2.) You will require a smaller sprocket on the engine-shaft, but you must remember that even a fifteen-tooth sprocket, as at present fitted, is smaller than the minimum size recommended by the chain makers.

ELECTRIC LIGHTING.

(1.) I have recently purchased a small dynamo giving an output of 12 volts 7 amperes. How many 4 volt 4 c.p. metal filament lamps will it supply? (2.) How long does a 4 volt metal filament lamp generally last? (3.) Should I run No. 14 wire to as central a position as possible, and tap off to various positions by means of No. 18 wire? (4.) What kind of fuse wire would be necessary?—B.W.

(1.) The dynamo would illuminate twenty-one lamps of 4 volt 4 c.p., but they would have to be in series of three, i.e., seven sets in threes. (2.) It is impossible to estimate the life of metal filament lamps; it might be anything between 100 to 500 hours, according to the conditions of service. (3.) Each set of three lamps should be on 1/18; the mains should be of 3/18 or 7/20 wire. (4.) The main fuses should be 10 amperes, and one or two amperes on each circuit.

WHICH WHEEL LIFTS?

On reading in an old issue a question and your reply on which wheel lifts on a corner, I see that it is possible to lift the cycle on sharp right turns. I was once going up a hill with a sidecar at a fair speed, expecting when at the top a downward gradient of some length, but was surprised to find just about fifteen yards over the top a solid stone wall facing me and a sharp right-hand turn so narrow as to be almost invisible. There was no time for slowing down or thinking, and I turned sharp, but there was certainly no lifting of the cycle. The sidecar wheel, however, bent into a complete right angle. But does not this disprove the assertion that the cycle lifts?—E.T.

The curious accident which you experienced in no way disproves the fact that, on a sharp right-hand turn, if the speed is high enough, the motor cycle will lift and go over the sidecar. Why it did not do so in your case was probably because the speed was not sufficiently high, and also that the centrifugal force, exerted by the machine, which ultimately causes it to lift, brought about the collapse of the sidecar wheel as you indicate. We ourselves, at any rate, are quite satisfied, after personal experience and observing it on trials, that if the speed is high enough the machine will lift over the sidecar on right-hand bends.

TWIN FIRING ON ONE CYLINDER.

May I offer my experience to "W.H.D."? I am also owner of a $2\frac{1}{2}$ h.p. Douglas, which lately developed precisely the same symptoms he complains of. All the engine parts, as in his case, appeared in perfect order, until, on removing the crank case cover, it was found that the cam wheel bush was worn, and this was associated with considerable wear in the bearing parts of the valve rockers, interfering, of course, with the perfect working of the valves. After rebushing the cam wheel and replacing the rockers the trouble disappeared.—P.J.B.

Re "W.H.D.'s" query in the issue of the 28th ult. about a Douglas, the trouble is probably caused by the exhaust lifter cable being a shade too tight. If this is released until the faintest slackness is felt on touching the exhaust lever, I think he will find his troubles are cured.—J. G. BEAL, M.P.S.

Important Dates.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Thurs., Sept. 8th—Norfolk M.C. and L.C.C. Open Speed Trials.

Sat., Sept. 10th—North-Western Centre A.C.U. Open Speed Trials.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Sat., Sept. 24th—M.C.C. Sporting Trial.

Sat., Oct. 1st—Doncaster and District M.C.C. Open Speed Trials.

Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"J.U.M." (Belfast).—A.V. monocar: General experiences.

"D.C.M." (London, W.I.).—Scott Sociable: Particularly consumption and reliability.

L. H. Scott (Rock Ferry).—A.V. monocar: General running and stability on corners.

"T.K." (Deal).—A.V. mono or bicar: Reliability and general wear.

"A.B." (Clapham, S.W.11).—Indian Scout, solo or sidecar: Consumption, suitable oil, carburetter adjustments, etc.

"F.A.R.C." (Westminster).— $2\frac{3}{4}$ h.p. three-speed Douglas with light sidecar: Maximum gradients climbable, etc.

J. W. Howard (Bristol).—Indian Scout, electrically equipped model, and $3\frac{1}{2}$ h.p. sports Sunbeam: Speed, climbing, general performance, and reliability.

"P.B.S." (Newmarket).— $4\frac{1}{2}$ h.p. 1921 Ariel with sidecar: Economy, reliability, comfort, and braking power.

BIRKENHEAD TO ABERYSTWYTH.—

T.A.McB.

" 24th	8.34 "

Motor Cycle Police in the Provinces.

Four Rudge Multi sidecars are being used by the Liverpool police for various road duties, and are giving every satisfaction.

The Price of Petrol.

The price of petrol is still too high, but motor cyclists will be content with "threepenny" reductions—provided they are frequent enough. We suggest that a further reduction is due.

The International Trials.

Last week we gave a fully illustrated report of the International Six Days Trials in Switzerland, written by a member of *The Motor Cycle* staff who accompanied the competitors. On pages 192 and 193 of this issue will be found his impressions of the Trial.

The "Six Days."

Among the trade entrants in the annual A.C.U. Six Days event this year are two teams on machines which have not been represented since the pre-war trials, i.e., the F.N. and the Rudge. One of the F.N.'s will be ridden by H. G. Bell, a well-known F.N. exponent in days gone by, while the Rudges will be in the hands of F. T. Sibley, who drove a twin Rudge in the Scottish Trials; W. L. Danskin, the old Rover expert, who has now joined the competitions staff of the Rudge-Whitworth Co.; and R. B. Ewens, who has figured in more than one classic trial.

Imports and Exports.

While the total value of motor cycle imports during July has increased by £5,418 compared with June, the increase in our exports during the same period has only been £4,572. Actually, too, fewer machines were exported, but the deficit was largely made up by an increase in "value of parts." Comparative figures, culled from the Board of Trade returns for June and July, follow:

IMPORTS.			
	June, 1921.	July, 1921.	
Number of motor cycles ..	71	78	
Value of machines and parts	£15,289	£20,707	
BRITISH EXPORTS.			
	June, 1921.	July, 1921.	
Number of motor cycles ..	722	646	
Value of motor cycles only	£54,792	£54,834	
Value of parts ..	£19,374	£23,904	
Total value ..	£74,166	£78,738	

Cautions.

Many villages on the London-Colchester road are complaining of inconsiderate and fast driving, and, according to a warning issued by the A.A., unless an improvement is observed, the police will be compelled to take action.

Waterloo Bridge Repairs.

The repaving of the carriageway on Waterloo Bridge is shortly to be commenced, and the Commissioner of Police of the Metropolis wishes to warn drivers of vehicles of probable congestion on the bridge, and to suggest that as much use as possible should be made of the other bridges.

The Old Wyche Road.

A Malvern magistrate has suggested that the Bench should make an application to the County Council to apply to the Minister of Transport under Section 7 of the Roads Act, with a view to an enquiry being held and steps taken to prohibit or restrict the use of the Old Wyche Road by motor cyclists. He submitted that the use of the road was being abused, and that this traffic was not only a nuisance but also a serious danger.

Special Features.

PASSENGER MACHINE TOPICS.
500 MILES TO A GOLF COURSE.
IMPRESSIONS OF AN ALPINE TRIAL.

Evidently a Standing Order.

The P. and M. sidecars used by the R.A.F. in London are equipped with a wheel lock, consisting of what appears to be a few links of the *Aquitania's* anchor chains, enclosed in leather, and a padlock.

A Warning.

A short while ago we published a letter from a gentleman who had been victimised by an impostor who called himself Mr. Reg. Brown, and borrowed money from him. We have to record that several other instances have since occurred; and the names of Mr. J. E. Greenwood and Mr. T. Cyril Greenwood have been used in a similar manner. Messrs. John Marston, Ltd., the makers of the Sunbeam, appeal to our readers to assist in the capture of the impostor by giving the earliest possible notice to the police and to themselves, if they are asked for money by any person professing to be a member of their staff.

FRENCH WIND WAGGON IN LONDON.

An imposing example of a limousine wind wagon of French origin, and fitted with an air-cooled engine. This is the lightest and simplest form of car construction, there being no gear box or transmission difficulties to overcome. The car is seen passing through Trafalgar Square.

CURRENT CHAT (Continued from p. 208).

Congratulations.

Congratulations to the manufacturers of the Norton motor cycle, and to H. W. Hassall, who rode it to victory in the Grand Prix in Belgium.

Another Price Reduction.

The following price reductions are announced for Morgan models: Sporting, £206 to £180; Grand Prix, £218 to £192; *de luxe* (a.c.), £215 to £188; *de luxe* (w.c.), £228 to £198; family, £235 to £200.

Motor Cyclist Helps Fire Fighters.

Mr. Chas. F. Coales, chief officer of the Newport Pagnell Fire Brigade, wishes to thank the driver of the Matchless sidecar, who, on Sunday, the 7th inst., carried one of his men to the scene of a fire after he had missed the departure of the fire-engine.

Practice for the Belgian Grand Prix.

When the competitors were about to qualify for the practice laps, they were asked to complete ten. The English riders said this was too much and started to bargain with the timekeeper, who then suggested five, but our countrymen beat him down to three. The men were all started on these three laps without number plates, and though one could not be distinguished from the other, they all qualified.

A Practical Handbook.

Based on the "Hints and Tips" pages of *The Autocar*, wherein they have been a feature since 1902, the handbook "Complete Hints and Tips for Automobilists" (5s., Iliffe and Sons Ltd., 20, Tudor Street, London, E.C.4) now reaches its eighth edition. Although of chief interest to the car owner, it is full of such sound practical "horse sense" in matters relating to the care and repair of mechanical and electrical things that it should be of almost equal value to the motor cyclist, for there is scarcely a page without some useful workshop "kink" of general application.

Lubrication.

One of the first lessons for the novice to learn is that the majority of engine troubles arise from inefficient lubrication. Sometimes the application of the lubricating system is the cause, but more often unsuitable oil is the source of trouble.

Nationalities.

At most speed events where certain well-known riders are competing, one hears remarks which go to show that Sgonina is regarded as an Italian, Le Vack and de la Hay as Frenchmen, and Bennett as an American. They are all British, including the last-mentioned, who is Canadian.

South African T.T.

The South African Tourist Trophy race, held at Maritzburg under the auspices of the Natal Club, was won by J. Young on a Triumph, who covered the 142 miles at an average speed of 40 m.p.h.; while M. Cohen, also on a Triumph, was second.

A Warning.

For passing a car from behind while a motor cyclist was approaching in the opposite direction, a car driver has been fined £5 and costs. The motor cyclist was struck by the overtaking car, and suffered a broken finger and a damaged shoulder. The practice of overtaking a car when the road ahead is not clear is most dangerous.

Sunday Competitions.

A strong protest has been made to the North Eastern Automobile Association against Sunday competitions, and members of the North Eastern Centre A.C.U. have protested against the proposed embargo. On the understanding that the N.E.A.A. name does not appear in connection with any Sunday programme, a projected resolution by the N.E.A.A. against such competitions was not proceeded with. Our views on Sunday competitions appear on the leader page. We do not favour them for reasons which often have appeared in these pages.

Trial for Fixed Gear Machines.

Previously confined to Levis machines, this year's trial of the Levis Athletic Club (Motor Section) for the Yardley Cup will be open to any rider of a direct belt drive machine (including Zeniths and Ridges, if the gear lever be sealed in one position). The event will take place on Saturday afternoon, the 24th prox., and further particulars may be obtained from Mr. W. S. Banner, c/o Messrs. Butterfields, Ltd., Stechford, Birmingham.

Sweeping the Board.

In the recent North Wales open trial, G. F. Burns, riding a $3\frac{1}{2}$ h.p. Sunbeam, secured the two premier awards (open challenge cups) in addition to a silver bowl and a special prize and a gold medal. Not bad for a private owner!

Motor Cyclist Police.

Replying in the House of Commons to Captain Viscount Curzon, who asked the Home Secretary whether he could yet make any statement on the work carried out in the control of traffic by the motor cyclist branch of the Metropolitan Constabulary, Mr. Shortt said that the Commissioner of Police has called for reports by the end of August, and hopes by that time there will have been sufficient experience to enable the subjects referred to to be properly reviewed.

102 Entries in the Six Days Trials.

In addition to the ninety-nine entries for the Six Days Trials (which take place between August 29th and September 3rd), already tabulated on page 183 of our last issue, there are the following additional riders to be included: C. Crosthwaite ($3\frac{1}{2}$ Duzmo), R. Croucher (8 Matchless), and F. Watson (8.7 G.N.). The Beaumont entry also is now given as a $2\frac{1}{2}$ h.p. machine to be ridden by G. W. Shepherd.

In the above-mentioned list first published, it should be noted that A. G. Wall is the rider of a $2\frac{1}{2}$ h.p. Cedros (not A. G. Ward), and that the 7.9 h.p. British Radial, to be ridden by J. S. Holroyd, is entered by the British Radial Engine Co.

On the last day of the Six Days Trials in Switzerland, a speed test was held at Eaux-Mortes. Here is C. Laeser ($2\frac{1}{2}$ Condor), a competitor in the 350 c.c. class. The 350 c.c., 500 c.c., 750 c.c., and 1,000 c.c. classes were won by British machines.

Another British Success in International Race. A Norton wins the Belgian Grand Prix with Indians second and third, and James fourth. Triumph accomplishes Fastest Lap.

A NORTON won the Belgian Grand Prix last Friday, thus completing a triple success for British machines in international road races. It is interesting that, while the T.T. was won on an A.J.S., and the French Grand Prix on a Sunbeam, the Belgian event was carried off by a Norton, which goes to show that British superiority does not lie in one super-tuned machine, but is fairly representative of the whole industry.

Never has a motor cycle race been run over a prettier or more charming course than the 1921 Grand Prix of the Fédération Motocycliste Belge.

The circuit is situated in the most delightful part of the Ardennes, about eight miles south of Spa, and is approached through the woods by one of the longest and straightest hills we have ever seen.

Leaving the grandstand, the course makes a large S bend, crossing a bridge, and thereafter comes a long ascent, followed by a fall with easy curves, next the dangerous Malmédy corner, then a straight stretch to near Stavelot, where a special by-pass loop has been made, a steady climb to the Francorchamps corner, where another loop was specially constructed for the race, and a descent back to the grandstand.

In Picturesque Surroundings.

The grandstand (or *tribunes*) was unlike any other, as it was built on the side of a hill by a landscape gardener, and words fail to describe its beauty. The hill flank was studded with terraces covered with cinders and with rough stone steps leading to them. Rustic fences, benches, and chairs were duly arranged, and pots of fresh growing flowers and plants were placed here and there; the whole effect was delightful. The British competitors were well pleased with the course. Sgonina said he liked it better than the Grand Prix, and that it was more like that in the Isle of Man; but, whereas the machines were not fast enough on the Le Mans circuit, they had speed enough and to spare for this one. Le Vack also liked the course, but thought the road rather loose for high speeds. This was certainly the case, but it was perfectly smooth, beautifully prepared, and dustless; and it may be mentioned here that the roads in the district are as fine as may be found anywhere.

The scoring board was opposite the unique grandstand, and was of plain unwhitened deal, so that the figures did not show up at all well. Moreover, as there were always at least four ladders placed against it, the reading of the times was no easy matter. The replenishment arrangements consisted of one long bench placed on the hill just below the scoring board, partitioned off for each make. The fact that the depots were on a down grade was not very convenient, as the men had considerable difficulty in pulling up at their stations, and often overshot the mark.

Few Novelties.

At 8 a.m. the machines were examined, and their frames were sealed with a piece of string and a lead seal. They presented no novel features, except that Mouret's

H. W. Hassall, winner of the Belgian Grand Prix on a $3\frac{1}{2}$ h.p. Norton. He averaged 56.91 m.p.h.

Sun had an extra air port in the side of the cylinder, and a rotary inlet valve as in the T.T. Renier's Sarolea had large "fir cone" coolers over the exhaust valve cap and in the compression tap hole.

The Rush machines were fitted with $2\frac{3}{4}$ h.p. J.A.P. engines and English components throughout. Quite the most ingenious idea was that fitted to the Nortons, and at first sight its *raison d'être* was impossible to fathom. It consisted of a piece of tin placed behind the top fork link and cut with deep serrations. Enquiry elucidated the fact that these serrations were twenty in number, and that the riders intended to bend one down at the end of each lap, and thus easily keep account of their lap progress in the race. Shemans and Sgonina, who, like the other Triumph riders, wore a white cross on their T.T. helmets, used Ricardo

engines, while Edmond used the side-by-side valve pattern.

The Belgian Motor Cyclists' Federation has not had much experience in the organisation of racing events; but although their arrangements were a little crude, they did their best. It seemed strange that the principal parts of the course were not connected by telephone; but we were told that this could not be arranged, as part of the course ran through liberated territory still under a military governor; but this did not prevent the whole circuit being guarded by 300 Belgian soldiers in the khaki uniforms and tasselled forage caps so familiar in England during the war.

It had been intended to start the competitors in a group as at Le Mans, opposite the grand stand, but owing to the proximity of the two bends and a somewhat narrow bridge, it was wisely decided later to make the actual start after the curve at the base of the first hill. So just before 9 a.m. the men were given what was called *un faux départ*, or false start, which meant that they proceeded to the timekeeper at an easy pace, and started in earnest at the given signal. From the grandstand to the true starting point was but a few minutes' walk, and so it was easy to return before the leaders were due, even though it was expected they would cover the 15.082 km. course (nearly ten miles) in under ten minutes.

A Second Start.

Just on 9 a.m. the batch of riders were heard to start, and were seen coming round the bend. They were stopped on a gradient of 1 in 16-20, and on coming to rest half of them left their engines running, so every other sound was drowned, and M. Marcellis had to give the signal to start by waving his arm. As is always the case when a large group of riders is despatched simultaneously, the sight was an impressive one.

Breslau, the Norton rider, was first away, but Hassall (Norton) showed wonderful acceleration and shot ahead, while Edmond (Triumph) and Strange (James), who started on the first line, were momentarily lost in the crowd of twenty starters. The junior machines left immediately afterwards.

Scenes during the Belgian Grand Prix Race.

BRITISH SUCCESS IN
THE THIRD OF THE
INTERNATIONAL ROAD
RACES OF 1921.

(1.) H. Hassall ($3\frac{1}{2}$ Norton), the centre of an admiring crowd after his success in the 188.5 mile race.

(2.) H. Le Vack and F. W. Dixon, who were respectively second and third on $3\frac{1}{2}$ h.p. Indians, at speed past the scoring board.

(3.) An idea of the picturesque nature of the course is obtainable from this illustration.

(4.) G. Strange ($3\frac{1}{2}$ James), who finished fourth, alongside his replenishment dépôt.

The Belgian Grand Prix--

From the grandstand an excellent view of the course could be obtained. On the left the competitors could be seen ascending the hill for nearly a mile, in front of the scoring board and past the replenishment depots, and again a glimpse of them could be seen passing on the flank on the opposite hill on the way to Frangorchamps corner. There was not long to wait before the sound of the leaders' engines could be heard: they could be seen but not distinguished as they flashed behind the scoring board, and in two minutes they arrived. Edmond (Triumph) was leading easily, while the other British crack riders, Hassall (Norton), Dixon (Indian), and Le Vack (Indian), were travelling in close order. Shemans (Triumph) was going well, and so were Strange (James) and Sgonina (Triumph). Only one Belgian rider, Breslau (Norton), who was running sixth, was among the leading eight men. Kicken's Gillet in the junior class was giving an excellent account of itself, while Mourct (Sun) arrived somewhat late. It is impossible to give the first lap times, as, owing to several riders passing in a bunch, a number of times were missed.

A Ding-dong Race.

The second lap saw Edmond still the leader, and going better than ever, with Hassall second and Dixon third. The leading man was marked by the scorers by means of a red disc, which hid his number; and when this was done, there were shouts from the press stand of "Take it down! Are you a Socialist?"

Edmond lost his lead on the third lap, and dropped to second place, while Hassall ran first, with Dixon third, and Le Vack fourth. Shemans occupied fifth place, Strange came next in order, and Claessens (A.B.C.) seemed to be gaining ground. Joha (Rush) stopped for some time, and afterwards re-started. The fourth lap showed no great change of position, except that Sgonina gained a place, while Edmond stopped for petrol. In the fifth lap Dixon, who was travelling in splendid form, took the second position from Edmond, who now ran third, with Le Vack fourth, and Sgonina and Shemans fifth and sixth respectively. It now transpired that Le Vack had been delayed by a broken valve spring in the first lap. The next lap saw Dixon gaining on Hassall; but, as they mounted the hill, Dixon lost ground again. Edmond still kept third place, with Le Vack fourth, and Shemans fifth. The seventh lap was marked by one or two incidents.

Edmond fell back to fourth place. Shemans slowed up at the replenishment depot, but shot off again, while Ghende (Rush) had a fall, and retired. In the eighth lap Hassall was still running as magnificently as ever, Dixon was missing, Le Vack was second, with Shemans third, and Sgonina fourth. Dixon arrived at last, and started to repair a fork member, which had broken, bracing it with a piece of iron and a strap.

H. Le Vack who rode second on a $\frac{3}{4}$ h.p. Indian.

When he pluckily started again, he was two clear laps behind. Edmond, who started well, was now among the unfortunates, and rolled in later with a loose tank and broken petrol pipe. In the ninth lap Hassall stopped to replenish, but his position was so good that he did not lose his lead. In the tenth lap several riders stopped for petrol and oil. At this stage the morning mist cleared, but the day remained dull and cool.

Halfway through the race the order and times were as follows:

	H. M. S.
H. W. Hassall ($\frac{3}{4}$ Norton) ...	1 35 19
H. Le Vack ($\frac{3}{4}$ Indian) ...	1 35 35
G. Shemans ($\frac{3}{4}$ Triumph) ...	1 39 16
C. Sgonina ($\frac{3}{4}$ Triumph) ...	1 47 29
G. W. Walker ($\frac{3}{4}$ Norton) ...	1 48 23

	H. M. S.
Claessens ($\frac{3}{4}$ A.B.C.) ...	1 50 39
G. Strange ($\frac{3}{4}$ James) ...	1 54 5
F. W. Dixon ($\frac{3}{4}$ Indian) ...	1 58 7
Perrin ($\frac{3}{4}$ A.B.C.) ...	2 1 38
Kicken ($\frac{2}{4}$ Gillet) ...	2 1 55
Desterbecq ($\frac{2}{4}$ Gillet) ...	2 4 47
F. G. Edmond ($\frac{3}{4}$ Triumph) ...	2 6 24
Gamara ($\frac{3}{4}$ Saroléa) ...	2 9 34
Mourct ($\frac{2}{4}$ Sun) ...	2 36 27

In the subsequent laps Hassall steadily increased his lead, and the order of the first five did not alter until the thirteenth, when Walker, who had improved his position, lost his place, and retired, owing to a broken piston. Hassall was now 3m. 10s. ahead of Le Vack, while Dixon, urged on by his delay, was pushing on to the extent of recklessness, but with no small degree of success. It takes some considerable amount of pluck to drive like fury with a broken and roughly repaired fork, but Dixon's blood was up, and he was now running eighth, and, though a lap or so behind, was racing neck-and-neck with Hassall.

The fourteenth lap saw the retirement of Shemans, who suffered engine trouble, and the fifteenth that of Sgonina, who had had both tyre and engine defects. The Saroléa team was sadly depleted, and they had indeed hard luck. Their chief tester was *hors de combat*, owing to an accident previous to the race, and one rider after another had to withdraw owing to distorted valves.

British v. American Machines.

The race was now left to British and American machines. Hassall was still unassailable; Le Vack was still going strongly; Dixon, through pluck or recklessness (call it what you like: it served its purpose, and all honour to him!), now rode in the third place with Strange (James), who had run most consistently, fourth; and the two French-built A.B.C.'s, which had travelled well from the start, in fifth and sixth places.

The fifteenth lap signalled the arrival of the first junior, Kicken (Gillet), who had ridden a splendid race; but when the second junior, Desterbecq (the other Gillet rider), arrived, he covered two laps before the marshals could stop him. In the sixteenth and seventeenth laps the survivors were running in the following order: Hassall, Le Vack, Dixon, Strange, Claessens, and Perrin, and maintained this until the finish. In the eighteenth lap Hassall and Dixon stopped for petrol. The final results were:

SENIOR CLASS (500 c.c.).

	H. M. S.
H. W. Hassall ($\frac{3}{4}$ Norton) ...	3 13 53
H. Le Vack ($\frac{3}{4}$ Indian) ...	3 23 20
F. W. Dixon ($\frac{3}{4}$ Indian) ...	3 42 6
G. Strange ($\frac{3}{4}$ James) ...	3 43 21
Claessens ($\frac{3}{4}$ A.B.C.) ...	3 55 50
Perrin ($\frac{3}{4}$ A.B.C.) ...	3 58 53

BRITISH RIDERS CARICATURED.

Hassall, Le Vack, Dixon, and Strange as seen by "Forg," of our Belgian contemporary *La Motocyclette*.

F. W. Dixon, placed third, was mounted on a $3\frac{1}{2}$ h.p. Indian.

G. Strange on a $3\frac{1}{2}$ h.p. James twin rode into fourth position.

to running such events, well carried out on the whole. They have learned a great deal, and will certainly do better next year. Such items as the system of time-keeping, which was inadequate; the scoring board, which was not too clear and too frequently obscured by ladders; and the slow posting of the times, are all matters which will be remedied next time the event is held.

The picturesque, effective, and unique grandstand was the idea of the Chevalier de Thiers, and it certainly worked well.

As regards the officials, Baron Nothomb, president of the F.M.B., MM. Paul Kelecom, E. Collignon, and Daems, together with their colleagues, did excellent work.

A Noteworthy Performance.

Hassall's win was certainly a fine one, as he never lost the lead he once gained, winning as he did by 9m. 27s. Le Vack ran well, despite having, in addition to valve spring trouble in the first lap, a broken chain in the last, while Dixon's performance is deserving of the greatest credit. Strange's consistent ride was specially praiseworthy, and has added another to the already long list of British racing successes on the Continent. As regards the lightweights, Kicken's ride is certainly worth special mention, and it is interesting to note that in the Belgian, as in the Grand Prix de l'A.C.F., a Continental lightweight won.

Comparisons.

The average speed over the total distance (188½ miles) of Hassall was 56.91 m.p.h., as compared with the following times at which other 1921 classic events have been won:

TOURIST TROPHY RACE (SENIOR).—54.49 m.p.h., by H. R. Davies (2¾ A.J.S.), the distance being 225½ miles, or six circuits of 37¾ miles.

500 MILES RACE (500 C.C. CLASS).—62.31 m.p.h., by V. Horsman (¾ Norton). His average speed for the first 200 miles was 62.75 m.p.h.

FRENCH GRAND PRIX.—59.9 m.p.h., by A. Bennett (¾ Sunbeam), over a distance of 193 miles. This event was similar to the Belgian Grand Prix, in that a triangular course of just over ten miles was traversed eighteen times by the competitors.

As was the case with the French Grand Prix and the International Six Days Trials, this third important Continental event was witnessed by a member of *The Motor Cycle* staff. Thus, this journal has been able to give an accurate and first-hand record of every important competition held this year.

COMPLETELY ENCLOSED SPRINGING SYSTEMS.

Showing details of the springs and method of housing. Small cover-plates provide access to the knock-out spindle nuts.

Neat and attractive layout of a lightweight fitted with Yano front and rear springing. The forks are merely rigid girders.

SIMPLICITY and neatness are the chief claims of the Yano springing system, and while it is not claimed the design is ideal for a heavy passenger machine, we are inclined to agree with the patentees (Messrs. S. Yano and W. Hall) that it is very suitable for bedriven lightweights. It is applicable to both front and rear wheels.

Briefly, the wheel spindle is mounted eccentrically on discs, supported and free

to rotate on each side of the hub. Rotation of each disc is controlled by a clock spring, one end being attached to the disc and the other to the cover plate of the housing. Movement of this cover plate modifies the spring tension as desired.

Protection and Lubrication.

Obvious advantages, of course, are facilities for ample lubrication arrangements, and for the provision of detach-

able wheels, and also the protection of all moving parts.

Just how neat this system would appear in actual practice is well illustrated by the drawing of a 2¾ h.p. machine embodying the springing. Incidentally, the general layout, large mudguards, and frame design combine to give a striking but attractive appearance.

The address of the inventors is 18, Cromwell Cres., Earl's Court, S.W.5.

Results of the North Wales Open Trial.

Sweeping Success by a Private Owner. Only 14 "Golds" Awarded.

AS anticipated in our report of the North Wales M.C.C. open trial, held on the 6th inst., only a very small percentage of the competitors gained gold medals—actually fourteen out of approximately one hundred starters.

Four riders tied for the two premier awards, the North Wales Open Challenge Cup and the North Wales M.C.C. Open Challenge Cup, and the results therefore were decided on a secret check at Cerrig as follows:

G. F. Burns (3½ Sports Sunbeam), 1m. 6s. error.
Sam Wright (4½ Humber sc.), 3m. 55s. error.
Frank W. Giles (7 A.J.S. sc.), 7m. 19s. error.
J. Howard Davies (3½ Sports Sunbeam), 8m. 49s. error.

The only other tie occurred for the club team prize, and here again the secret check gave first place to the North Wales M.C.C. team, with the Coventry and Warwickshire M.C. second. Full results follow:

THE NORTH WALES OPEN CHALLENGE CUP (for the best performance of the day, presented by Mr. O. Bonner Thomas).—G. F. Burns (3½ Sunbeam).

NORTH WALES M.C.C. OPEN CHALLENGE CUP (for the best performance by a private owner, prize given by Mr. W. E. Rowlands).—G. F. Burns (3½ Sunbeam).

NORTH WALES CENTRE CHAMPIONSHIP PRIZE.—J. H. Davies (3½ Sunbeam).

SILVER CUP (for the best performance by a member of the N.W.M.C.C., presented by the President).—J. H. Davies (3½ Sunbeam).

SILVER BOWL (for the best performance by any solo machine, presented by the Manufacturers' Union).—G. F. Burns (3½ Sunbeam).

SILVER VASE (for the best performance by a sidecar machine or three-wheeler).—Sam Wright (4½ Humber sc.).

SPECIAL PRIZE (for the best performance by a private owner's sidecar machine).—Only one competitor, who was disqualified.

SPECIAL PRIZE (for the best performance by a lightweight, private owner, presented by Mr. H. Gibson).—G. A. Lovegrove (2¼ Radco).

SPECIAL PRIZE (for the best performance by a 500 c.c. machine, presented by Mr. A. J. Brewin).—G. F. Burns (3½ Sunbeam).

SPECIAL PRIZE (for the best performance by a lightweight, presented by Mr. A. J. Brewin).—G. F. Mason (2¼ Connaught).

THREE SILVER CUPS (for the best performance by a club team).—N. Wales M.C.C. team: R. Edwards (4 Triumph), C. Lightening (4 Triumph), and J. Edwards (4 Triumph).

THREE SILVER CUPS (for the best performance by a trade team).—The W. Edwards team: R. Edwards (4 Triumph), C. Lightening (4 Triumph), and J. Edwards (4 Triumph).

SILVER CUP (novices prize, presented by the Manufacturers' Union).—R. Edwards (4 Triumph).

SPECIAL PRIZE (awarded by the Committee for a plucky performance of the lady competitor).—Miss Marjorie Cottle (4 Triumph).

GOLD MEDALS.—J. Howard Davies (3½ Sunbeam), *G. F. Burns (3½ Sports Sunbeam), Sam Wright (4½ Humber sc.), Frank W. Giles (A.J.S. sc.), T. Blackburne Williams (4 Triumph), *S. V. R. Jones (3½ Norton), R. Edwards (4 Triumph), Reg. Brown (3½ Sunbeam sc.), G. Nor (8 Matchless sc.), *John Knowles (4 Triumph), *W. J. Kellett (4 Triumph), *Griff. Roberts (4 Triumph), *W. Wells (3½ Sunbeam), and G. Dan (3½ Sunbeam).

SILVER MEDALS.—J. O. Jones (4 Triumph), R. E. Grice (2¼ New Imperial), E. A. Hughes (4 Powell), W. Edwards (4 Powell), J. R. William (4 Powell), C. Lightening (4 Triumph), J. Edward (4 Triumph), Bert Kershaw (2¼ New Imperial), G. I. Francis (2¼ Francis-Barnett), G. F. Masc (2¼ Connaught), *H. W. Hardwick (3½ Sunbeam), W. Brandish (4½ Humber), W. Williams (5 Raleigh), F. S. Spouse (8 T.B.), F. J. Ellis (Matchless sc.), and Rex Mundy (7 A.J.S. sc.).

BRONZE MEDALS.—Allen S. Jones (2 Francis-Barnett), *R. N. Roberts (4 Triumph), Norman Norris (2¼ Armis), L. Crisp (4 Humber), Lewis A. Welsh (4½ B.S.A.), *V. V. Jones (3½ Sports Sunbeam), John E. Arthur (4 Triumph), G. Savage (2¼ Hobart), D. Harris Jones (3½ Sunbeam), *C. A. Lovegrove (2¼ Radco), J. Jones (4 Triumph), L. L. Sealey (4½ B.S.A.), Wheeler (3½ Sunbeam sc.), Capt. Peatty (2 Hawker sc.), G. E. Stobart (7 James sc.), Stanl Parker (7 Matchless sc.), *Marjorie Cottle (4 Triumph), W. Ishill (4 Triumph), Walter Owen Jones (4 Triumph), and E. Foster (5-6 Raleigh).

* Private owner.

FORTHCOMING EVENTS.

Open Speed Trials and Dinner.

Entry forms are now available (from Mr. R. O. Clark, 2a, Upper King Street, Norwich) for the open speed trials of the Norfolk M.C. and L.C.C., to be held at West Harling Heath on the 8th prox. There are nine trophies on the award list, and the affair will be wound up by a dinner at the Maid's Head Hotel, Norwich, at the close of the meeting (7.30 p.m.). Tickets for the dinner (7s. 6d.) may be obtained from Mr. R. A. Lower, "Mount Pleasant," Lower Helleston, Norwich.

Novices' Race at Next Brooklands Meeting.

There will be six three-lap handicaps and one half-lap scratch race at the fifth members' meeting of the B.M.C.R.C., to be held at Brooklands on the 27th inst. One of the handicap events is for members who have never won a first prize at a B.M.C.R.C. meeting.

Glasgow Open Trial.

Next Saturday the Western M.C.C. (Glasgow) is holding an open reliability trial for the Fifty Guinea James Challenge Shield and other prizes. Entries closed at ordinary fees yesterday, but late entries will be accepted at double fees to-day and to-morrow.

Open Speed Trials at Pendine Sands.

Representing the motor cycle clubs of Carmarthen, Ystalyfera, Neath, Cardigan, Ammanford, Pyle, Brecon, Maesteg, Haverfordwest, and Aberystwyth, the West Wales Centre A.C.U. is holding open speed trials at Pendine Sands on Thursday next (the 25th inst.). There are five open championship classes and seven members' events for a big award list.

Open Hill-climb near Bath.

Next Saturday's big event is an open hill-climb of the Western Centre A.C.U., which will be held on Kingsdown Hill, near Bath, commencing at 2 p.m. A good entry has been received.

SUGGESTED TWO-STROKE MODIFICATION.

A TWO-STROKE engine, which embodies several novel features, has been recently designed by Mr. G. Dubois, of 20, Eastcheap, E.C. So far as the general principle of working is concerned, the engine follows ordinary two-stroke practice, with the exception that air only is drawn in through a port connected with the crank chamber. This air is then compressed by the descending piston, and is forced up round the carburettor choke tube, which is situated in the transfer passage.

Instead of the usual transfer port, however, there are four ports cut in the piston skirt, and these correspond with

A sectional perspective drawing of the Dubois two-stroke engine, showing the arrangement of the cylinder and piston wall ports.

four passages in the cylinder wall where the piston is at the bottom of its stroke, thus leaving a clear connection between the crank case and the cylinder.

Novel Control.

The control of the engine is by means of a throttle controlling the supply of air to the crank case, and consequent the quantity of mixture delivered to the engine. The carburettor is provided with an adjustable taper needle control to the jet, which may be altered while the engine is running.

The chief advantage claimed for the engine is that the mixture is not compressed in the crank case, so minimizing the possibility of minute particles of petrol becoming condensed before reaching the cylinder; this, it is claimed, improves consumption, and goes a long way to prevent misfiring and four-stroke at low speeds.

A SCOTTISH SIX DAYS IN MINIATURE.

NEW trials ground will be broken at the Scottish Two Days Open Reliability Trial to be held on the 17th and 19th of September, the intervening Sunday being spent in Stranraer. It is aptly described by the organisers as "Scottish Six Days in miniature," the regulations being almost identical with those for the larger event.

There will be seven non-stop hills as follows:

SATURDAY.—Talla Linns, Aul-Hill, B. Road, Chairley's Brae, and Tynron Hill.
MONDAY.—Laird's Hill, Pinmore Hill, and Final Hill.

Apart from the first, second, and third class awards, there are two team prizes for club and trade teams.

Entries will be accepted by the secretary, Mr. Campbell MacGregor, 5, East Terrace, Edinburgh, up till Monday September 5th, at single fees.

The start of the trial, of course, will take place at Edinburgh.

ESSEX M.C. AT BROOKLANDS

TWO SUCCESSFUL RIDERS OF
FLAT TWINS.

Good Sport but
Few Spectators
Characterises
the Motor Cycle
Classes of this
Annual Event.

C. Pearson (3½ Douglas), winner of the long handicap of eight and a half miles for machines between 400 and 1,000 c.c. His speed was 63.33 m.p.h.

S. J. Bassett (3 A.B.C.), who won the long-distance handicap for machines under 500 c.c. His speed was 62 m.p.h. over the eight and a half miles.

was unfortunate that the Clerk of the Weather should have chosen Saturday last as the day which should mark the end of the drought in London, for a morning interfered sadly with the number of spectators who assembled to watch the Essex Motor Club's annual meeting at Brooklands. The club was at least fortunate, however, in that the track was quite dry by lunch time, while the rain obligingly held off during the afternoon.

Although the number of entries received for the three motor cycle events on the programme was not really large, the quality of the riders was of a high order, and good sport was witnessed. The silver machines in particular distinguished themselves.

Speed of Small Machines.

For the first of the three motor cycle races on the programme, the Essex long handicap for solo machines not exceeding 500 c.c., twenty-two entries had been received, and eighteen runners left the paddock. V. E. Horsman (Norton) was originally placed at scratch, but later was given 48s. start, as the machine he was riding was not the one on which his handicap had been judged. J. L. Emerson's Douglas, which had a Flexi carburettor fitted, was a favourite at the start. On the actual race, the main feature was the speed of the smaller machines, for N.A. Lowe (2½ Diamond-Jap) and E. J. Arson (2½ New Imperial) at 2m. start, and A. G. Miller and H. J. Line, both on Martin-Japs and at 1m. 54s., were down the railway straight ere Emerson's Douglas and F. A. Applebee's Norton had left the mark.

N. Stewart on H. Powell's Trump-Jap travelled well, but was unable to catch S. J. Bassett (A.B.C.) and S. V. Prestwich (Diamond-Jap), these two

finally finishing first and second, with Powell third and I. P. Riddoch (Blackburne) and V. E. Horsman (Norton) chasing them home. The winner's speed was 62 m.p.h. Result:

1. S. J. Bassett (A.B.C.)	Start.
2. J. V. Prestwich (Diamond-Jap)	1m. 45s.
3. H. Powell (Trump-Jap)	1m. 18s.

There were only five non-starters in an entry of twenty for the second Essex long handicap (for machines of from 400-1,000 c.c.) over a distance of eight and a half miles, but these included H.R.H. the Duke of York's Harley-Davidson. Practically all the interest centred on C. F. Temple's Harley-Davidson, which, being at scratch, did not start until C. Pearson's Douglas led the field round for the first lap. As it happened, the lead thus established made the American machine's chances hopeless, and the Douglas won at 63.33 m.p.h., with B. H. Wood's Norton a good second, and J. L. Emerson third on another Douglas. Temple, travelling at great speed, came up with a rush on the last lap, and was close to the end of the far banking as the winner crossed the line. Results:

1. C. Pearson (Douglas)	Start.
2. B. H. Wood (Norton)	2m. 24s.
3. J. L. Emerson (Douglas)	2m. 24s.

Sidecars v. Cycle Cars.

The third and last motor cycle event was the Essex long handicap for sidecars and three or four-wheeled cycle cars, sidecar engines being limited to 1,000 c.c. and cycle car engines to 1,100 c.c. Ten machines left the paddock, including W. R. Steele's G.N. R. R. Coes (Indian) was limit man with 1m. 57s. start, followed by H. H. Beach (Norton) at 1m. 45s. This handicap proved sufficient for Beach to win easily at 59 m.p.h., with O. de Lissa (Motosacoche-M.A.G.) second,

and the field well behind. D. R. O'Donovan (Norton) with a new engine was apparently nursing it, for after a fast first lap he seemed to slow perceptibly. The G.N. came in, apparently with tappet rod trouble, before the last lap. Result:

1. H. H. Beach (3½ Norton sc.)	Start.
2. O. de Lissa (7 Motosacoche-M.A.G. sc.)	1m. 45s.
3. I. P. Riddoch (8 Zenith-Jap sc.)	38s.

SEVERE ONE-DAY TRIAL IN IRELAND.

BEING compelled to abandon its two-day trial to Glengarriff, owing to many of the roads in the south being "trenched," the Dublin and District M.C.C. made its holiday event a one-day affair over a severe course in Co. Wicklow.

In Spite of Weather.

The weather conditions were very disagreeable, rain and wind combining to make things unpleasant; but, notwithstanding, only three of twenty-five starters failed to complete the course. The finishers were: Heuse (B.S.A.), Steven (Velocette), Daly (Triumph), Carville (Triumph), Adsir (B.S.A.), Holmes (Enfield sc.), Smith (Indian sc.), Murphy (Triumph), McAllister (Triumph sc.), Greene (Enfield), Holdinn (Cotton), O'Connor (Norton), Allan (Norton sc.), Johnstone (New Comet), McGrath (A.J.S. sc.), Woods (Harley-Davidson sc.), Cartons (Norton), Redmond (Indian), Woods (Martinsyde sc.), McCuttagart (Reading Standard), Maguire (Humber), and Hassett (Norton). Markings at the open controls were very close, and the winners of the Freeman and Walker Cups will probably depend on the secret check errors. Official results appear on page 198.

CLUB NEWS. (Continued from page 198.)

Macclesfield and District M.C.

Entry forms for the Axe Edge hill-climb, to be held on the 28th inst., may now be obtained from Mr. T. Simister, Jordangate, Macclesfield. This event is open to all clubs in the North-western Centre A.C.U.

Central London M.C.C.

On and after the 20th inst. all communications for the hon. secretary of the above club should be addressed to him at 91, Broadhurst Gardens, Hampstead, N.W.6.

Public Schools M.C.C.

Only two competitors made non-stop runs in the reliability, brake, and acceleration test held on Saturday. Results:

WINNER OF CUP, R. C. Charlesworth (5 Zenith); 2, H. B. Browning (3½ Scott); 3, G. C. Gardner (3½ Sunbeam).
GLASS WINNERS—350 c.c., no finisher; 500 c.c., G. G. Gardner (3½ Sunbeam); 600 c.c., H. B. Browning (3½ Scott); 750 c.c., R. C. Charlesworth (5 Zenith); 1,000 c.c., no finisher.

At the invitation of the B.M.C.R.C., the club will hold a handicap race at Brooklands on the 27th inst. for a club silver cup. In addition, cups will be awarded for the fastest scratch times in the various capacity classes.

Evesham M.C.C.

On Friday evening last the club held its first hill-climb on Hopton Hill, Evesham, the hill generally used by the Worcester M.C.C. The lower reaches of the hill were greasy, and one or two skids occurred; the upper crest was rough. Some good times were accom-

plished, F. Morrall doing the fastest time of the day on a 4½ h.p. B.S.A. He averaged nearly 45 m.p.h.

The results were as follows:

SOLO MACHINES (UP TO AND INCLUDING 350 c.c.).—1, J. N. Bacon (2½ Douglas), 42½s.; 2, F. P. Andrews (2½ Omega), 46½s.; 3, F. Jinks (2½ New Imperial), 51½s.

SOLO MACHINES (UP TO 600 c.c.).—1, P. F. Andrews (4½ B.S.A.), 29½s.; 2, F. Morrall (4½ B.S.A.), 30s.; 3, H. Tuckwood (4½ B.S.A.), 34½s.; 4, F. G. Byrd (3½ Norton), 35s.

UNLIMITED SOLO MACHINES.—1, F. Morrall (4½ B.S.A.), 28s.; 2, P. F. Andrews (4½ B.S.A.), 28½s.; 3, P. B. Bent (6 Bat), 29½s.; 4, H. Tuckwood (4½ B.S.A.), 30s.

SIDECAR MACHINES (UP TO 600 c.c.).—1, F. Morrall (4½ B.S.A. sc.), 47½s.; 2, A. Sharp (4 Triumph sc.), 61½s.; 3, C. S. Hiles (4½ B.S.A. sc.), 67s.

UNLIMITED SIDECAR, LIGHT CAR, AND CYCLE CAR.—1, R. Gibbins (8 Enfield sc.), 34½s.; 2, J. N. Bacon (6 Enfield sc.), 44½s.; 3, A. O. Brown (6 Enfield sc.), 60s.

West Fife M.C.

Some very close finishes were witnessed in the knock-out hill-climb held at the Wicks-o'-Baiglis on the 6th inst., no fewer than four events being won by inches. Results:

350 c.c. CLASS.

MEMBERS.—1, S. C. Hubbard (2½ Coulson); 2, G. W. Calvert (2½ Diamond).
PRIVATE OWNERS.—1, D. Dougall (2½ H.B.).
OPEN.—1, G. W. Calvert (2½ Diamond); 2, S. C. Hubbard (2½ Coulson).

600 c.c. CLASS.

MEMBERS.—1, J. Morgan Phillips (3½ Sunbeam); 2, W. R. Beveridge (3½ Sunbeam).
PRIVATE OWNERS.—1, E. Ewing (3½ Norton); 2, D. Bennett (3½ Sunbeam).
OPEN.—1, R. Stewart (4 Norton); 2, O. G. Braid (3 Motosacoche).

UNLIMITED.

MEMBERS.—J. Morgan Phillips (3½ Sunbeam); 2, W. R. Beveridge (3½ Sunbeam).
OPEN.—1, W. R. Beveridge (3½ Sunbeam), 2, R. J. Braid (7-9 Indian).

SCRATCH EVENT.

1, R. J. Braid (7-9 Indian); 2, J. Morgan Phillips (3½ Sunbeam).

North London M.C.C.

Despite the uncertain weather conditions last Saturday, a good attendance was made at the gymkhana held in large football ground near the county headquarters, Radlett. The winners and events were as follows:

BLONDIN RACE.—1, R. L. Richardson (2 Alecto).

BLINDFOLD RACE.—1, F. Thompson (Triumph sc.); 2, S. F. Colman (3½ James).
EGG AND SPOON RACE.—1, G. J. Read (Enfield); 2, H. Bartlett (2½ Coulson).

THREADING THE NEEDLE.—1, R. L. Richardson (2½ Alecto) and Mrs. Henderson; 2, C. Bartlett (2½ Coulson) and Mrs. R. Baxter.

Bath and West of England M.C.

On the 6th inst. the club held a two hours reliability trial for the Victory Cup and other awards. The route was 2 miles, via Bridgewater, Porlock, Lynton, Lynton Hill, Crediton, Exeter, Taunton, and home to Bath. Results:

1 (Victory Cup and replica), V. C. Anstice (A.B.C.); 2 (gold medal), E. Colmer (3½ Norton); 3 (silver medal), E. W. Spencer (4 Omega); (bronze medal), J. Carver (5-6 Rover).

East Midlands Centre A.C.U.

On Saturday next the clubs in the East Midlands Centre are holding a unit gymkhana and motor cycle sports meeting in the grounds of Stamford Hall, 4 p.m. A military band has been engaged, and will play for dancing on the lawn in the evening. An admission of one shilling will be charged, which includes fees to all gymkhana events.

A Section devoted to Club Announcements will be found on Supp. xl.

GLASGOW OPEN SPEED TRIALS.

FASTEST time of the day at the open speeds trials of the Western M.C.C. (Glasgow), held on the 6th inst., was made by D. S. Alexander (7-9 Indian). Full results, with speeds, follow:

Experience tells

IT is pleasing to record that two of the greatest motor cycle riders of modern times are believers in the principle of "Extra Air." Mr. H. R. DAVIES' winning $2\frac{3}{4}$ h.p. A.J.S in the T.T. races was fitted with an *extra air inlet*.

Mr. H. Le VACK, who secured the magnificent victory on an Indian in the 500 miles race at Brooklands said in an interview with the "Daily Mail" correspondent: "The carburetter is standard, the only special fitting being an *extra air inlet*."

No fitment is used in two such important events as an *experiment*.

Blackburne

MOTOR CYCLES

"The Machine that
runs like a Car."

4 POINTS FOR YOU

1. The outside flywheel provides wonderful acceleration together with smooth and silent running.
2. The detachable cylinder head makes inspection and cleaning easy, and valve grinding a comfort.
3. The ample bearings of Car type eliminate trouble and give long life to working parts.
4. The specially designed fins with ample cooling surface prevents overheating.

Blackburne Combination, fitted with
8 h.p. engine, complete with spare
wheel and luggage carrier £197 10 0
Blackburne 4 h.p. Solo £127 10 0

Write for Booklet.

BURNEY & BLACKBURNE, LTD.,
(Dept. z.) 38, CONDUIT STREET, LONDON, W.1

Telephone: Mayfair 637.

Model 64-D, is the same as B. with double dress-guard and foot-rest attached. Dress-guards and foot-rests 15/- extra. Will fit on B. at any time.

Model 64-F, is the same as E. showing arm rests down if required. Seat same as B. Folds up like G. and H. Complete £3 10 0.

All seats finished in Black and Gold. Plated fittings.

TYNESIDER

PILLION RIDING DE-LUXE.

Latest Models.

All these seats are fitted with Cantilever spring set, four Cantilevers being used. Adjustable springs at each side. Adjustable for child or adult.

Any component part may be attached or detached in a few minutes. Making 8 different seats with Model 64-B. Adjustable clips to fit any carrier.

Ask for Henderson's Tynesider Pillion Seat. Have no other or you will be disappointed. Henderson is the original inventor of pillion seats.

Tynesider r Black Plating Lacquer.
Gives a splendid BLACK PLATING FINISH to Lamps, Handle-bars, Windcreens, Brasswork, Steel and Plated Fittings of all kinds. Easily and quickly applied. May be used for high-class Stoves, Fireplaces, etc.
2/6 per tin, post free.

Any good up-to-date trader will supply you. Ask Halford, Rudge-Whitworth, etc.

Model 64-B, very low seating position, about 1 in. from carrier. A safe seat, no swaying, handsomely finished, 45/- Handles 2/6 each extra.

H. Shows how the seat E. F. & G. fold up and tucks away on the carrier when not in use. Luggage may be packed on seat, thus making a spring carrier.

G, shows dress-guard of E. F. & D. half folded, leaving the footboard for child's use, or may be fully opened for adult's use.

Tynesider Transparent Lacquer.
One coat of this lacquer on brasswork, plate, or any metal, will keep it bright for months without cleaning. Try it on handle-bars, lamps, and fittings of all kinds. Saves time, labour, and worry.
2/6 per tin, post free.

We have a few shop-soiled 1920 seats at 21/- . These are supplied direct only.

Model 64-C, is the same as B. with stirrups attached. Stirrups 7/6 per pair extra. Fitted with rubber rest and are adjustable.

Model 64-E, is the same seat as B. with folding back-rest and double dress-guard attached. Folds up like H. or G. Complete £3 10 0.

Buy from the original maker of pillion seats.

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

ACTUALLY AT HALF PRICE.

Size.	Pattern.	Our Price.	List Price.
26x2	Touring 3-ply Rubber Studded	23/-	46/3
"	Passenger 4-ply Rubber Studded	26/6	53/-
26x2½	Touring 3-ply Rubber Studded	24/6	49/-
"	Passenger 4-ply Rubber Studded	27/9	55/6
28x3	Racing Rubber Bars and Studs	50/6	too

We guarantee these Covers to give a minimum mileage of 3,000 miles, and will replace any proving faulty on this basis.

Whatever tyre mileage you are satisfied with, these tyres, are "good for more."

A SPORTING OFFER

In order to increase our post-sale business, we are prepared to refund the remittance on every 100th order, and send the goods, carriage paid, no matter the amount. We keep separate books for post-sales, therefore this offer does not apply to counter customers.

These special Clearance lines are sent Carriage Paid on 7 days' approval against remittance.

SANDUM

DUAL PURPOSE

SIDECAR

(PATENT.)

Approved by all the leading manufacturers, and suitable for any make of motor cycle. Finished in colours to suit.

A scientific production of a Single or Double Sidecar at will. By moving the seat back to the forward position and opening the back locker-lid a further spring back and spring seat are disclosed, suitable for a six-foot passenger.

The only family sidecar which is at the same time comfortable, elegant, inexpensive, and carries the weight in correct position, i.e., over the rear axle.

Insist that *both* your passengers shall ride in comfort, and not on make-shift dickey seats. A six-foot man can occupy either seat.

42 Guineas (complete),
TO FIT ANY MOTOR CYCLE.
Body only, 21 Guineas.

When ordering your Sidecar specify **SANDUM Patent SCREEN** for comfort, protection against rain, and simplicity of movement.

Ask for our Catalogue, which gives a complete range of **SIDECARS**, and prices, from **£16-16-0 upwards.**

The 1922 Tourist Trophy Races in Belgium.

THE decision of the A.C.U. Competitions Committee to hold next year's events in Belgium implies an offer to contest supremacy with our Continental rivals on their own ground, and it is sincerely to be hoped that foreign machines will be entered in substantial numbers, and that the result may provide data of benefit to all. At the moment, opinion is divided on the subject of the wisdom of transferring the T.T. from the now famous Isle of Man course to Belgium, and some leading opinions, in reply to an invitation by *The Motor Cycle*, appear in this issue. As a matter of fact, the Competitions Committee's recommendation does not yet appear to have received the ratification of the General Committee of the A.C.U., so that the announcement has come in the nature of a bombshell.

The Tourist Trophy races have always been international in name; but though foreign competitors have taken part in them from time to time, they have only done so half-heartedly.

The A.C.U., as organisers, should be on their mettle, and should be able to give the organisers of Continental competitions an opportunity of learning some useful lessons. While Continental competitions are, without exception, modelled on British events, and every effort is made to carry them through on just lines, the all-important question of timing is by no means well understood.

So far as the accessibility of Spa is concerned, this town is far more comfortably reached than the Isle of Man. Harwich is a port accessible by means of good roads from all parts of England, and those who take their machines by train can leave London in the evening, have a comfortable night on board, and reach Spa in the afternoon. Spa is only a little over four hours' run from Antwerp over steadily improving roads.

There is certain to be some disappointment that such a typically British event should be transferred to the Continent, and it is probable that a large

number of motor cyclists, who annually combine their holiday with the Tourist Trophy races in the Isle of Man, may refrain from crossing to Belgium next year. Much can be said on both sides of the question, and the views of our readers will undoubtedly prove interesting.

The Cycle Car and the Sidecar.

AMONG a certain section of motorists there has, for many years, been a conviction that eventually the cycle car must supplant the sidecar. If history and tendencies are examined carefully, it must be admitted, however, that prophecies of this nature are no nearer becoming fact than they were a decade ago. In the first place, it should not be overlooked that the cycle car was never intended to be a sidecar substitute, but rather a vehicle to bridge the gap between the popular three-wheeler and the car. How these vehicles failed to do this until they developed into the light car type is now common knowledge. A big gap exists, however, between the sidecar and the light car, and, although this is being narrowed by the lighter form of small four-wheeler sold at a figure in the neighbourhood of £250, a gap still remains, between the £250 and the *de luxe* sidecar. Apparently it will always exist for the reason that, at whatever price a light car four-wheeler can be produced, a sidecar of superior quality can be offered much more cheaply. The price gap at the present time is approximately £60; present tendencies fail to indicate that next year the prices of the two types will be any nearer.

Apart from this question of initial outlay, sidecar owners always consider the extra cost of upkeep, including taxation and storage. Again, the present-day owner of a first-class sidecar usually prefers to own a vehicle at the apex of one class rather than one which is at the bottom of another.

• Everything considered, therefore, it would appear that potential cycle car buyers constitute a section of the community distinct from sidecar owners.

How it Strikes an Outsider.

AN old friend of mine—one of those quaint lunatics who love a car, but consider motor cycles a rather boring invention of Satan—got entangled in one of our modern reliability trials the other day, and was sufficiently amused by what he saw to follow the event for a few miles. His impressions follow:

"What nonsense the whole affair was! You might as well smear a haystack with birdlime and stick pumpkins all over it, as expect the men to climb the hill I saw. Most of them fell off. Two or three charged the spectators, some of whom showed the most marvellous acceleration. Six trade riders went up the hill in quite extraordinary fashion, but I did not bother to ask what make of machine they were riding, as if I ordered a duplicate from my ironmonger at Little Slopton, I am quite sure it would not go up the hill; and even if it would, nothing would induce me to let it. I suppose these youngsters find the world rather dull now that there is not any war on."

Stone Cuts.

I HAVE already "done in" several covers this season, and in each case stone cuts have been the prime cause; indeed, I have to go back to pre-war days to recall scrapping a cover through honest wear, *i.e.*, because the road had buffed all the rubber off the tread. Four times this season have I ruefully spotted a gash which exposed the fabric, and on yet another occasion the gash took no spotting, for the stone bit clean through the inner tube as well. None of these tyres had done a reasonable mileage. There is no cure; one may insert a gaiter or a sheath, but in no case will the cover last much longer, and the retreading people will not look at it. One rather hesitates to entrust the gash to a local vulcaniser, knowing that an unskilled hand may overcook the tyre; and if one sends it away to the tyre maker—well, the next mount may take a different size of tyre. Worse still, practically all my own riding is professional rushwork, and I dare not risk a dubious tyre on such jaunts.

Presumably, quite a number of utilitarian riders have had similar experiences. What is the remedy? Are the standard machines of the day undertyred in many

cases? Or should we agitate for better roads? There is a tendency amongst competition folk in general to get tyres cheap or gratis to regard such trouble as a mere transient annoyance. We must remember that to some private owners my year's experience would represent a waste of about £10 in hard cash. None of my cuts were sustained on freak roads in trials.

Hotels, Beware!

WHEN I am riding on duty, half an hour more or less, and there are other people besides journalists for whom means distance. Such folk often find it impossible to wait for dinner at the "Stag and Spectacles," they happen to reach that well-known hostelry 6.30 p.m., dinner being listed for 7.30 p.m. I have to push on, and round about 7.30 p.m. reach the "Goat and Compasses," thirty miles further on, and go straight into dinner without any waste of time. This process cuts both ways. Sometimes it happens that the house which you cannot patronise is dear, or bad, or both; and that the house you pass at the psychological minute gives you a Car menu at 3s. 6d. More often it is the other round. Last week, for example, the bell was rung for dinner as I passed a very famous motor hotel of the small roadside type. I entered. Julie soup (*i.e.*, dish-washings); mackerel (cold and greasy); roast lamb (Canterbury, and badly cooked at that); an unrecognisable pudding; and cheese of the most trappy sort. 7s. 6d. Small bottle of cider, 1s. And the girl expected the change.

The Inevitable Consequence.

CAR owners are squealing at the current cost of a motor tour which depends on hotels, and it is not astounding that the far less pecuniary motor cyclist is taking to camping. The Israelite of old had a fancy for their tents, and I begin to think they knew something. I have amassed what looks rather like a large sponge bag. Inside it is a portable hotel. Two of us can now go down Porlock or up to Sutton Bank without adding anything to our living expenses. We have washed dinner along the road. We ride till we have enough, and then camp, and cook a late supper, with

Occasional Comments.—

oes not cost us £1 a head. Perhaps the motor coaches will compensate the hotels for the motor cyclists who have been fleeced away from their portals during the last two years; but wherever you see a few tents pitched, you will find

- (1.) The majority are motor cyclists.
- (2.) Who never tried camping till *après la guerre*.

Police and Noise.

RECENT prosecutions show that in many parts of the country the police are taking action against (1) long exhaust pipes on $3\frac{1}{2}$ h.p. singles and (2) baby two-strokes with standard silencers. Owners and makers alike are waxing gleeful because several of these summonses have been dismissed. This is foolish. How do they imagine that such prosecutions will be? Because a bored and ambitious constable studies the Motor Car Act, and suddenly pounces, all in his own? Such cases are rare. The usual procedure is that some charming resident bumps into the local chief constable at the club or the links or the edge, or any old place, and buttonholes him. Said charming fellow has bought a new house on a main road, or his wife is sick, or the new baby is teething and sleeps lightly, or there is some novel factor in his

life which has made quiet nights desirable. He is thereby driven to notice that motor cycles are unduly noisy. So he tickles up his pal in the police. The C.C. takes notice for a few days, and meanwhile one or two people complain to him. Finding the complaint reasonable, he puts his men on the alert.

The Spearpoint.

SO—to my mind—the real urge behind this outcrop of anti-noise summonses is public annoyance, and I take them quite seriously. Moreover, I think less than nothing of the fact that some of these injured innocents demonstrated their alleged noisy machines to sporting benches, and got the cases dismissed. I myself own a machine which can make the very dickens of a row when I want it to, or when I drive it carelessly; but if I were demonstrating it before the average bench, it would purr like a sucking dove. Let us rather tackle the facts. Most baby two-strokes are unpardonably noisy. A good many of the super-tuned sports $3\frac{1}{2}$ h.p. are ditto. People are getting rusty about it. Let's quiet them down. These pleading words ought to come with unusual force from my pen, because I am not—and never have been—in favour of really silent machines, which I regard as a public danger.

This illustration conveys a slight idea of the scenery through which the International Six Days Trials routes passed. The scene is on the Col du Brück, and depicts E. H. Lees ($3\frac{1}{2}$ Sunbeam) during the timed hill-climb.

Experiences in the Belgian Grand Prix.

A Chat with the British Winner concerning his

FRESH from his victory in the Belgian Grand Prix Race, we had an engrossing chat with Hubert W. Hassall. The fact of the Belgian Grand Prix being won on a $3\frac{1}{2}$ h.p. Norton British-made motor cycle completes the chain of successes of British mounts in the three important road races of the year, i.e., the T.T., the French Grand Prix, and the Belgian Grand Prix.

Hassall put up a magnificent ride in the last event and deserved the luck he experienced after the series of misfortunes which befell him in the two earlier races. For instance, he experienced valve trouble in the T.T., was haunted by tyre troubles in France, but finally in the Belgian Grand Prix had a no-trouble run throughout—as we are wont to expect of the speedy Norton.

There was never any doubt about Hassall's skill, for he sits his machine in a businesslike fashion, and his pluck and daring have often-times been admired. Hassall is but twenty-three years of age, and his success in Belgium was his first important racing success, despite many hill-climb wins.

Favoured the Belgian Course.

He was full of praise for the Belgian course, which he compared favourably to the Manx course, regarding it as similar to the best ten miles of the Island circuit, but the Belgian road surface is in much better condition.

His Norton machine had the usual Sturmey-Archer gear, but with higher ratios, i.e., 4, 5, and 7 to 1.

During practice he imagined that an eleven minutes average would spell success, but actually in the race itself he averaged nine minutes forty-five seconds per lap, proving that it is impossible to reproduce in practice the verve and thrustfulness which a competitor exhibits on an actual race day.

There is one bad bump on the Belgian course which Hassall will never forget. In practice he was lifted clean off the ground, ten spokes in the wheel being broken. He spoke in appreciative terms of the sporting action of the Sarolea manager (himself a rival in the race), who had a new wheel built up for his machine the same day.

Closely Pressed at Half Distance.

On the race day, Hassall made two stops for petrol and oil at the end of the ninth and eighteenth laps, and actually led the field from the third lap. He was not aware until he saw *The Motor Cycle* last week that he was but sixteen seconds ahead of Le Vack at half distance, his outstanding impression of the race being the ding-dong duel he had with F. W. Dixon (the Indian rider) for eight laps. These two doughty

H. W. Hassall, winner of the Belgian Grand Prix, on a $3\frac{1}{2}$ h.p. Norton, with Mr. J. L. Norton, designer of the machine.

Memorable Duel on Wheels.

exponents ran neck and neck passing and re-passing each other continually. The crowds of spectators around the course were not slow to appreciate what was happening, and cheered their respective favourites every time the two riders came round.

Curiously, due to the variety of bends, one or other discovered that he was the star turn on particular corners. For instance, Hassall could guarantee to leave Dixon on one gradual bend which he dared not take without cutting out. Later on they would encounter a curve which Dixon would swoop around at over a mile a minute and leave Hassall well in the rear until again they were linked up.

A Thrilling Episode.

After eight laps of this kind of thing, it was only to be expected that there might be a risk of the two touching, and, as a matter of fact, Hassall encountered one very thrilling incident at Stavelot, where the two riders, after five laps together, approached the hairpin bend:

speed. Dixon forged ahead on the bend, but Hassall, with slightly superior acceleration, drew level. Both at the same instant drew over to the right, but Hassall's front wheel accidentally touched Dixon's back wheel, with the result that his machine was turned off the road, over a ditch, round a tree, and back again on to the road, the rider retaining his presence of mind and controlling his steering throughout—a narrow squeak indeed! The duel temporarily ended by Dixon dropping out of the running, due to some minor engine trouble, though Hassall was not aware of this at the time, and two laps later Dixon once again chipped in to continue the whirlwind laps, and Hassall imagined it was another case of "blinding" to prevent an American victory. When the race was over, and Hassall had scored a comparatively comfortable victory, he learned from Dixon himself that it was merely strategy which caused him to overtake Hassall, as he was out to crack up the Norton engine if he could—by extreme speed work, of course—and so give a chance to Le Vack to bring the other Indian home to victory. 56.91 m.p.h. was the winner's average for approximately 188½ miles.

We tested Hassall's feelings on the A.C.U. decision to hold the 1922 T.T. race in Belgium, and he was quite enthusiastic concerning this decision, being one of those who consider $3\frac{1}{2}$ h.p. machines to be too fast to do themselves justice on the Manx course; he thinks the Belgian course much more suitable.

Hassall's winning Norton was equipped with Dunlop tyres, B. and B. carburetter, Renold chains, K.L.G. plugs, and C.A.V. magnet. He used Castrol oil.

LIGHTWEIGHTS *in the* INDIAN JUNGLE

How Small Two-stroke Machines served an Overseas Shooting Party.

BEGUILED by the comparative coolness of the air and the absence of the blinding sun-glare during the first few days of the monsoon, thoughts in our little up-country station in the United Provinces naturally turned to shooting, memories of our pleasant cold-weather trips having kept us company during the long sultry days and nights which were a forerunner of this season.

It was not without trepidation that our trio, A, B, and C, the proud possessors of baby two-strokes, prepared the machines in anticipation of a run of twenty-five miles into one of the shooting districts, the last seven miles of which were over (it could be more correct to say through) "fourth-class" road under conditions that are rarely experienced at home—mud and water reaching to the footrests, with an occasional oasis in the surrounding "lake."

Sending on the necessary servants, food, etc., by country cart, we set off with tanks full to the brim, and safely negotiated the "pukka" portion of the road in creditable time, one involuntary stop caused by a choked petrol-pipe being made. With a last reluctant glance at the metalled road we had just traversed, we took the unmetalled portion with a dash, and, with any a sideslip and many a rust out foot to retain balance, we arrived at a spot where a tempting and apparently flat dry embankment on one side of the road led onwards to our destination. Unconsciously, accelerating at sight of this very inviting track, three confirmed optimists, in a very short space of time, discovered that they had struck the site of an old narrow-gauge steam tramway which had been rooted during the war, the sleeper beds unfortunately

Jungle mounts of proved utility.

retaining sufficient depth to jolt one's very bones ere it was possible to pull up. B, striking a deeper rut than usual, and having a low ground clearance, pulled up with a damaged silencer.

Without further mishap our destination was reached and, resigning our motor cycles in favour of an elephant, we were transported with the peculiar lumbering gait of our beast of burden to the jungle.

After consultation with the local "shikari," it was decided to beat a thick and almost impassable strip which lay in front of us, and, taking up a position on the west side, we waited with infinite patience, fingers on the triggers of our rifles, for eventualities; the shouts of the beaters as they advanced towards us from the east side, forcing their way through the thick undergrowth, growing momentarily louder and louder. A rustle at the edge of the jungle heralded the approach of game, and

a moment later out jumped a herd of chital (Indian deer), wonderfully pretty animals with skins and heads which, if good, are greatly prized. Simultaneously, our rang three rifles: a rather fine buck rolled over and two others were observed to be hit. In quick succession, alarmed by the shouts of the beaters, who were now close upon us, out came a black buck nilgai, and, finally, peacock, partridges, and other birds. For the first named, our rifles were again requisitioned, and then, hastily exchanging rifles for shot guns, the

birds were greeted with a blaze of 12-bore.

The next day also yielded excellent sport, but the terrors of the muddy road called us away in the early afternoon and despatched us on the return journey.

The value of even "baby" machines in a country of this description, surrounded as we are with good shooting, is inestimable.

T. L. H.

An Old Name Re-established

New 550 c.c. Trump-
Jap Sporting Model.

BEFORE the days of the war the Trump-Jap machines, which were associated with the name of F. A. McNab, were well known in competition circles, and especially so on Brooklands. During the present year the name has been revived, and Trump Motors, Ltd., of Byfleet, are again in the field, with Mr. McNab actively engaged in the design and track riding of the machines, and Col. R. N. Stewart in control.

The idea obtaining in the production of these machines is that a series of sporting models shall be made to suit the requirements of the class of rider favouring this type of mount.

A New 4 h.p. J.A.P. Engine.

An 8 h.p. sporting model, having the J.A.P. twin engine, was illustrated in our issue of the 4th inst. on page 141, and another model which is being brought forward is the 4 h.p. single, engined with the new 550 c.c. J.A.P. unit.

The new sports model Trump, fitted with a J.A.P. engine of 550 c.c. and a three-speed Sturmey-Archer gear box.

The machine follows a conventional lay-out, having Druid forks and a frame with curved top tube. The peak of the saddle is hinged to the latter, the springs being mounted on supports which are carried from the top back stay bridge. 650x65 mm. tyres are fitted, and transmission is by chain and belt through a Sturmey-Archer gear box. The latter may, at option, be one of the special type for speed work, with clutch but minus kick-starter, and with very close gear ratios, or the standard box with kick-starter and the ordinary low bottom and middle ratios.

As yet, the new 550 c.c. single-cylinder J.A.P. engine has not become familiar to the majority of motor cyclists, but will be seen that it follows the lines of the 250 c.c. and 350 c.c. models, which were used with so much success in the T.T. The sparking plug is inclined to the rear of the inlet port, and large aluminium valve caps with radiator flange are used.

A detail refinement is the crank case, which is arranged on the timing gear, which is arranged between the valves, so as to blow engine oil spray on to the stems to prevent the valves wearing badly in their guides.

Wrynose Pass in the Cumberland Trial.

New Imperial Lightweight wins the Alan Trophy in Cumberland County M.C.C. Open Event

FULL results are now announced of the Cumberland County M.C.C. open one day trial for the Alan Trophy, which was held on the 13th inst.

Wrynose Pass was, of course, easily the deciding factor of the day, this mountain-side, boulder-strewn sheep track proving too much for fully 90% of the entry; both George Dance and T. C. de la Hay were failures here, so some idea of the exceedingly deceptive nature of the hill may be gauged. Our readers will be familiar with the difficulties of Wrynose from various articles that have appeared in past numbers of *The Motor Cycle* from the pen of Mr. George D. Abraham, who incidentally described its conquest by a lightweight machine nearly eight years ago. Kirkstone Pass, Red Bank, Rest and be Thankful (Traveller's Rest), and Buttermere Hause were the other observed hills, but none of these caused much trouble. Regarding the fairness of Wrynose Pass, the following letter from Mr. T. Rutherford, local consul of the Northern Centre A.C.U., is illuminating:

Defending Wrynose.

"As the individual who was responsible for the inclusion of Wrynose Pass in our one day open reliability trial, and likewise in the interests of the makers of the various machines, I venture the following criticism:

"As a competitive rider of some little experience, I venture to state that Wrynose Pass as a test hill, not only for machines but for riders in like measure, is a real discovery.

"The percentage of failures on this hill was abnormally large; but, nevertheless, I am prepared to defend its inclusion to the last degree.

"In my opinion, there was not a single machine in the trial—solo, sidecar, or cycle car class—which had not ample power to make a perfectly clean ascent. I admired every bus beyond measure, but I regret to state that I cannot express myself in similar terms with regard to all the riders and drivers. The majority of them displayed very moderate skill and still less discrimination in picking their track. There were, however, some outstanding exceptions, such as B. Kershaw on his 2½ h.p. New Imperial, H. Williamson on his Norton, J. W. Wills on his Powell, F. Ellis on his Matchless, A. Pape on his Triumph sidecar, and J. E. Greenwood on his Sunbeam and sidecar, who all went up in a way which showed what can be done with present-day machines driven with care, ability, and discrimination.

Traps for the Unwary.

"I admit the hill is full of traps for the unwary; but in an open trial held in this part of the country there is no excuse whatever for anyone being caught napping. If men who are thoroughly well mounted feel disposed to ride more to the gallery than discretion would warrant, then the funeral is theirs. The unfortunate part, however, is that the reputation of the machine they handle may, in the estimation of the outside public, more or less suffer.

"Wrynose Pass as it exists to-day, in my judgment a really good test hill, and, if only a very slight outlay were expended upon it, it might well become one of the best and fairest test hills we have got.

"I sincerely trust that the Northern Centre may see its way to consider the further development of Wrynose Pass so that it may become the greatest and truest recognised test in the country.

"Following up the riders was a letter from Dias's garage in Carlisle, who was mounted on an old garage hack (Sunbeam), and whose duty it was to gather up the various observers' sheets and reports, and he doddled up Wrynose Pass from bottom to top in a manner which the most pretentious rider would do well to emulate."

Full results of the event follow:

ALAN TROPHY (value 65 gns.).—Bert Kershaw (2½ New Imperial).

CUMBERLAND COUNTY TROPHY.—Watson (4½ Humber).

BARRON TROPHY.—F. J. Ellis (8 Matchless sc.).

SPECIAL PRIZES.—350 c.c. Class: Edmond (2½ A.J.S.). 500 c.c. Class: Williamson (8 Norton). 750 c.c. Class: Watson (4½ Humber). 1,000 c.c. Class: F. J. Ellis (8 Matchless sc.).

Amateurs: J. Williamson (3½ Norton); H. H. (3½ Sunbeam).

FIRST-CLASS AWARDS.—B. Kershaw (4 New Imperial), Watson (4½ Humber), and J. Walker (4½ B.S.A.).

SECOND-CLASS AWARDS.—Williamson (8 Norton), Aitkinson (3½ Sunbeam), T. C. de la Hay (3½ Sunbeam), G. Dance (3½ Sunbeam), J. A. Dias (3½ Sunbeam), Hart (3½ Sunbeam), Morton (3½ Rover), G. M. Townsend (P. A. M.), Gold (8 Blackburne sc.), and Pape (Trump sc.).

THIRD-CLASS AWARD.—J. E. Greenwood (8 Sunbeam sc.).

TEAM PRIZE.—Sunbeam team.

Flexible Petrol Piping.

PETRO-FLEX is an unbreakable tubing built up of animal gut, treated with special glue, thinly wrapped with canvas, and armoured with copper wire. The sketch also shows the type of union fitted when this tubing is used as a petrol pipe. Of course, it is quite impervious to petrol or benzole. Blaisdell Petro-flex Tubing Co., Ltd., Cassiobury Works, St. Albans Road, Watford, Herts., are the manufacturers of Petro-flex piping.

rear lighting, Lovelace Bros. (Crescent Magneto Works, Norbury, London, S.W.), the designers, are prepared to convert existing two-stroke magnetos to supply both head and tail lamps.

Protecting the Licence Card.

NOT all licence holders are waterproof, but it is stipulated by the regulations that the licence card must be protected from moisture; and, to ensure this being done, the Inventors Sales

(Above) A licence enclosed in the Licenseal.
(Below) The two discs and tube of sealing paste that form this protective covering.

Agency, Cow Lane, Coventry, has placed on the market the Licenseal, which consists of two (apparently) celluloid discs, one black and the other transparent, between which the licence is placed. The sealing is carried out by means of a compound which forms a joint between the two discs, giving complete protection.

A Valve Lubricator.

THERE has now been introduced a Flexekas valve stem lubricator and air leak preventer for valves with exceptionally long springs. It is similar in principle to the standard type. (Mr. Clifford Pressland, A. M. I. E. E., Hampton-on-Thames, Surrey.)

The new type of Flexekas valve stem lubricator.

A Twist Grip Control.

PIDCOCK'S twist grip air and throttle control for use with ordinary Bowden wires is neat, simple, and easily fitted. As may be gathered from

Details of Pidcock's twist grip control.

the right sketch, showing the device dismantled, the grip itself actuates the throttle, while the air control wire is mounted on a separate slip ring movable by a projecting plug. The other drawing shows the complete control. (Richardson's Garage, Rosslyn Hill, Hampstead, London, N.W.)

A Special Racing Oil Pump.

WHEN travelling at high speeds the racing motor cyclist often desires to "flood" his engine with oil. To enable him to do this, A. C. Davison, 163, Arlington Road, Camden Town, London, N.W., has introduced an oil pump, fitted with a large container and a large plunger, built into the tank. The oil flows into the pump barrel through

Specially designed for racing machines, the Davison oil pump.

the holes shown in the illustration, and a sudden depression of the plunger forces this quantity directly into the engine. The plunger spindle then rises, and the chamber is thus refilled. These pumps are fitted to the racing Harley-Davidsons.

Electric Lighting from the Magneto.

OBTAINING lighting current from a standard magneto is not a new idea, but so many of our readers make enquiries as to how it can be done that this simple little fitting illustrated should

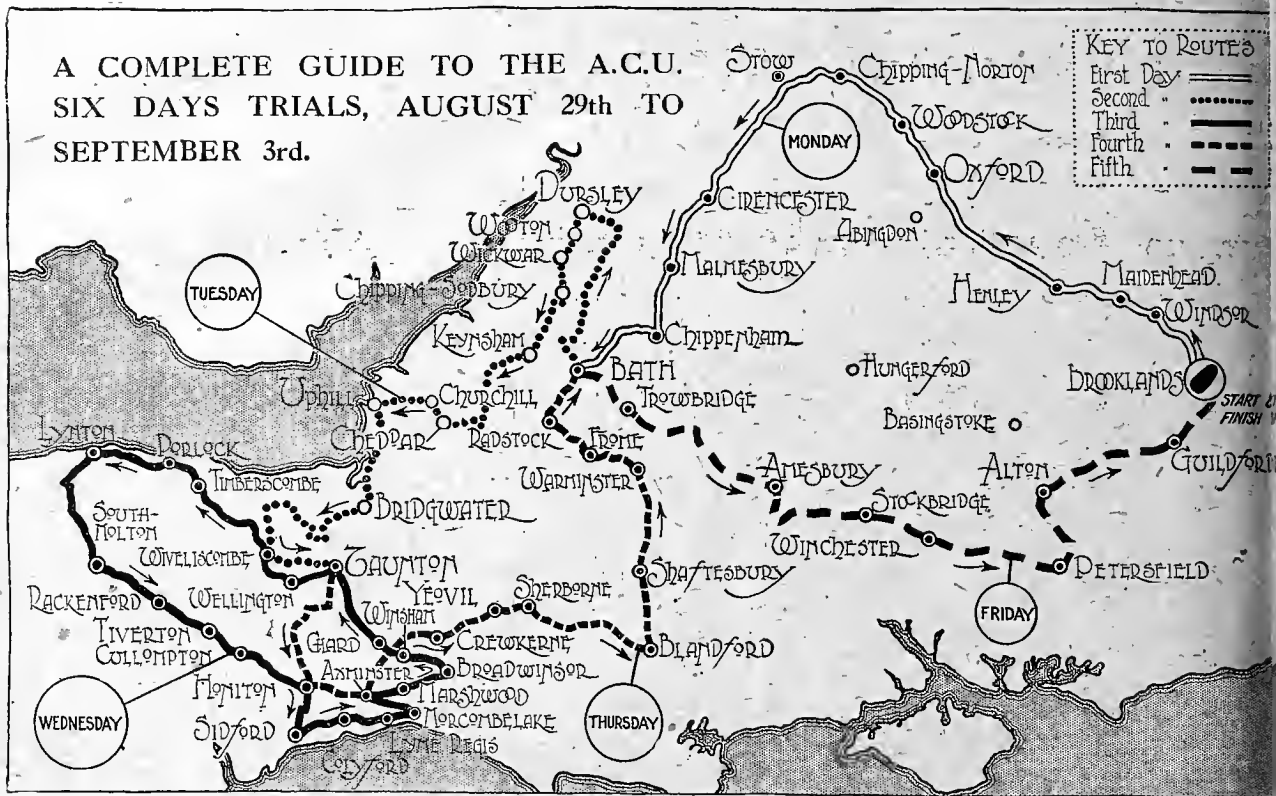

Lovelace Bros.' magneto lighting outfit. (Top) Fitted to the magneto. (Left) The projecting brush in position. (Right) The special contact-breaker cover.

all steady demand. Briefly a governor brush is fitted to the central screw of the contact breaker, making contact at all normal speeds with a brass segment on the special insulated contact breaker cover. Besides adapting this device for

NEXT WEEK'S BIG TRIAL.

A COMPLETE GUIDE TO THE A.C.U.
SIX DAYS TRIALS, AUGUST 29th TO
SEPTEMBER 3rd.

KEY TO ROUTES
First Day
Second
Third
Fourth
Fifth

The route to be followed on each day's run is clearly indicated. Brooklands is the starting and finishing point, and the total distance covered in the road test will be 739½ miles.

NEXT week, commencing on Monday, the 29th inst., the A.C.U. Six Days Trials will be held mainly over routes in the West Country, but starting and finishing at Brooklands.

This year, as already indicated in *The Motor Cycle*, instead of introducing a number of freak hills as an eliminating agency, the Union has worded the regulations so that, to gain a premier award, a machine must reach a certain standard of excellence in each of the following:

(1.) General reliability. (To be tested during the road portion of the trial.)
(2.) Hill-climbing. (Also to be tested on the road. There will be no freak hills, but any up-grade, however slight, may be observed.)

Silence and Brakes.

(3.) Silence. (Markings will be made by "aural observation." Only those machines, which, in the opinion of the judges, are objectionably noisy, will be penalised.)

(4.) Brakes. (Each brake will be tested separately on the Brooklands test hill.)

(5.) Fuel consumption. (All fuel replenishments during the trial will be carried out by the Union, and a maximum rate of consumption is laid down for each class, varying from 100 m.p.g. (oil, 1800) for solo lightweights to 45 m.p.g. (oil, 500) for the heavy sidecars.)

(6.) Speed. (A speed test of twenty-five laps of Brooklands track will take place on the last day of the trials, the

minimum set speeds varying from 30 m.p.h. to 45 m.p.h.)

(7.) Condition at finish of trial—that is, freedom from any undue signs of wear and tear.

"SIX DAYS" DETAILS.

DATE—Monday, August 29th, to Saturday, September 3rd.

START OF ROAD TEST—Brooklands, 10 a.m.

FINISH OF ROAD TEST—Brooklands, Friday, 2nd prox., 3.50 p.m.

DISTANCE—739½ miles.

BRAKE TEST—Brooklands (Monday, 29th inst.)

SPEED TEST—Brooklands (Saturday, 3rd prox.)

Only five days, from Monday to Friday inclusive, will be devoted to a road test of the machines, and, as the total mileage is only 739½, this portion of the trial cannot be regarded as over-strenuous. On the other hand, there are twenty-eight hills having a maximum gradient in excess

of 1 in 7, and any of these may be included in non-stop sections and observed.

After the brake test at Brooklands on Monday morning, the competitors (starting at 10 a.m.) proceed via Chipping Norton to Bath—a comparatively easy run of 138 miles. On Tuesday they follow a circuitous 155½ mile route via Taunton, ascending seven fairly difficult hills. Wednesday is spent in an out and home run from Taunton, including the well-known hills of Porlock, Lynton, Lynton Station, and Parracombe, and no fewer than ten less famous ascents (more than 1 in 7). Bath is reached again on Thursday night via Yeovil—comparatively an easier route than Wednesday, and only totalling 135½ miles. On Friday the return journey to Brooklands is made through Winchester, Petersfield and Guildford.

Saturday, as already mentioned, will be devoted to the speed test at Brooklands and the final examination.

Composition of the Entry List.

According to the revised entry list there are ninety-five competitors, made up as follows:

250 c.c. Solo ..	8
350 c.c. Solo ..	16
500 c.c. Solo ..	19
750 c.c. Solo ..	10
1,000 c.c. Solo ..	1
*600 c.c. Sidecars ..	11
1,000 c.c. Sidecars ..	23
1,100 c.c. Cycle Cars ..	7

*Includes three 292 c.c. sidecars.

Wednesday afternoon's run of eighty-seven miles includes several moderately steep inclines, but all should be surmounted easily.

POINTS OF INTEREST EN ROUTE AND TIMES OF THE FIRST RIDER.

It will be obvious that, from the point of view of the buying public, these trials are of far greater interest than any previously held by the Union; and, for the benefit of those readers who wish to note the performances of the competitors during the road portion of the test, we append the following tabulated itinerary and map.

MONDAY.

Route.	Accumulating Mileage.	First Competitor's Time.	Hills that may be Observed.
Bath	0	a.m.	
Cheltenham	6 1/2	10.00

Ripley	126 1/2	3.34 1/2	
Brooklands	132 1/2	3.50	

SATURDAY.

Speed Test at Brooklands.

Marks will be deducted for failure to reach, and bonus marks awarded for exceeding, the following minimum rates of speed:

250 c.c. Solo machines	30 m.p.h.
350 c.c. Solo machines	35 m.p.h.
500 c.c. Solo machines	40 m.p.h.
750 c.c. Solo machines	45 m.p.h.
1,000 c.c. Solo machines	45 m.p.h.
500 c.c. Sidecar machines	32 m.p.h.
1,000 c.c. Sidecar machines	35 m.p.h.
1,100 c.c. Cycle Cars	36 m.p.h.

At the conclusion of the speed test competing machines will be subjected to an examination by the judges.

Thursday morning's journey is from Bath to Cheddar Gorge, a distance of seventy-nine miles, and includes a few moderately steep hills.

Revised and Classified List of Competitors.

95 Entries, comprising 54 Solo and 34 Sidecar Machines, and 7 Cycle Cars (4 Three-wheelers and 3 Four-wheelers).

Types of Power Units Compared: 18 Single Cylinder Two-strokes, 3 Twin Two-strokes, 35 Single Four-strokes, 32 V-twin Four-strokes, 3 Flat Twins, 1 Three Cylinder Radial, and 3 Four Cylinders.

There are 42 Single and 13 Multi-cylinder Solo Machines, but Passenger Outfits have 29 Multi and only 12 Single-cylinder Engines.

CLASS A.—Motor Cycles not exceeding 250 c.c.

No. and Order of Starting	Rider and Machine.	Gear Ratios.		No. of Cyl.	Bore and Stroke.	Cubic Capacity.

Gear Ratios.

The details of maximum and minimum gear ratios are very interesting. It will be noted that only the three Scotts are relying on low gear ratios of less than double figures while the highest high gear is 3.25 to 1 on W. A. Fell Smith's Brough Superior sidecar.

OVERSEAS SECTION

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

Watersplashes—
At Home and
Abroad.

THE inclusion of freak watersplashes in one or two recent English reliability trials has given rise to considerable animadversion on the part of both the luckless competitors and the Press. It is argued, and rightly so, that it is most unfair to rob a good machine of the usually hardly earned distinction of a gold medal on account of a failure to navigate a stream that no normally-minded private owner motor cyclist would think of crossing under power. Yet the deepest splash deserves a word or two in its defence, apart from its "entertaining" possibilities and its helpful influence on the club treasury in the matter of reducing the "gold" issue; it reproduces a road condition that sometimes cannot be avoided by our friends overseas, and it proves, or disproves, the airy claims of our magneto manufacturers for complete waterproofing.

On this, and on the following page, are two pictures taken by a Cape Town reader, Mr. N. H. M. Ferguson, when on tour recently; and, although the drifts shown are not quite so deep as the one included in a recent North Wales trial, it would have been all

the same if they had! They had to be crossed, simply because there was no other way. Therefore, if the Welsh trial was successful in discovering even one make of "leaky" magneto, it will, perhaps, have served a very good turn to any South African motor cyclists who, on 1922 British machines, may essay a repetition of Mr. Ferguson's tour.

Provided that it is not in a non-stop section, an occasional deep watersplash in English reliability trials is quite in order from the point of view of the overseas motor cyclist. And, if we wish to make the sale of our products world wide, we must study the overseas point of view.

The Paradox
of British
"Service."

It is apparent that some of our overseas readers regard the British manufacturer either as a fool or a knave, or both, whose interest in his customer ceases when the customer's cheque is cashed, and who makes motor cycles to be sold and not to be used. Some even go so far as to say that the British manufacturer does not make spares for his machines!

WHERE STREAMS MUST BE FORDED.

Encountered when touring in the ordinary way by a Capetown reader; such a drift as this in South Africa can seldom be avoided by some short switch route as is the case with 99 % of English watersplashes.

Overseas Section.—

Perhaps, by his lack of enterprise in the matter of spares service abroad, the manufacturer himself is to blame; but, in view of the number of letters of appreciation that reach us daily, but which considerations of space prevent us from publishing (it would be easy to fill our correspondence pages weekly with such unsolicited testimonials alone), we feel that a word or two in his defence is justified. These letters—although admittedly the majority come from the home country, appreciations by overseas readers are not unknown—describe in some cases most remarkably generous treatment, replacing an engine on account of

a defective washer being more than once recorded; and, additionally, they illustrate the exceptional promptitude of the spares departments of our leading factories.

Obviously, therefore, it is not the manufacturer who is to blame for neglected overseas customers; it is circumstances, *i.e.*, distance between buyer and seller, plus the system on which he sells his goods, *i.e.*, the lack of system in his spares service outside his own country.

It is a great pity that this should be so, for thus the British manufacturer gains a quite undeservedly bad reputation in countries where he might easily double his sales.

Running alongside the "skeleton" railway bridge in the background will be seen the pedestrians' official path across this South African stream—a giddy affair of three ropes, and obviously unsuited for motor cyclists!

A Selection of Letters from Readers scattered all over the World.

Cut-outs in South Africa.

Feeling on the silence question in South Africa is exemplified by the following letter from MR. L. E. H. HAMERTON, honorary secretary of the Motor Cycle Union of S.A.:

"The motor car to-day is practically silent; and, whilst it is not expected that the motor cycle, with its limitations as to size, will ever attain the same degree of noiselessness as its bigger brother, much could be done in this direction if only manufacturers would give the matter their earnest attention.

"Of late years many manufacturers, realising that noise does not necessarily mean efficiency, have ceased to fit cut-outs to their machines, and it is earnestly to be hoped that the few firms who still fit this attachment may be prevailed upon to discontinue doing so.

"The use of the cut-out and the noisy running of some engines does much to discourage motor cycling amongst the general public, and my council feel that anything which can be done to allow the feeling of irritation which at present undoubtedly exists in the minds of the non-motoring public here, caused by the cut-outs and noisy engines, should receive the hearty support of all who have the welfare of motor cycling at heart.

"The subject of noisy motor cycles has been receiving considerable attention in the South African press; and, unless manufacturers do what they can to remove cause for complaint, repressive legislation is almost certain to follow in the near future."

[For several years the cut-out has been an illegal fitment on motor cycles used in the United Kingdom.—Ed.]

Value for Money in the Philippines.

Trade conditions for the British machine in the Philippines are more than ordinarily difficult, according to MR. G. H. GOLDING, who writes as follows:

"I am in the same position as most Britishers here are, as regards backing up the Home Country's products. Much as I would prefer to use an English make of motor cycle, I am forced, if I wish to bring this form of sport within the purchasing powers of my pocket, to support an opposition by getting what is without the least doubt, relatively speaking,

the better value for money. Here, of course, the British manufacturer is faced with the 33% tax on all his machines that enter the country, which, combined with the greater initial cost of production, in addition to the high rate of freights, etc., now ruling, renders competition more than ordinarily difficult.

"In Manila, I believe I am correct in saying that we are represented by one machine only. Fortunately, this is the best (in my humble opinion) that exists—the Sunbeam. Although only the 3½ h.p. model, and a sidecar machine at that, it more than favourably compares with the 7-9 h.p. outfits that supply the needs of the U.S. Army.

"An Indian Scout (electrically equipped) costs P.1,100, a peso being exactly the half value of the American dollar. I believe in England the same model is £143, which, even despite the tax, competes with a very fair measure of success with equally non-taxed and equally priced brothers of the United Kingdom."

British Lightweights Wanted in Australia.

Writing from New South Wales, Australia, "J.H.H." pleads for a greater variety of British lightweights on his market:

"It has occurred to me that British manufacturers of lightweight motor cycles, embodying 2½ h.p. Blackburne or J.A.P. engines, would be doing a great service to the community of this and similar places if they exported more of their machines for colonial use.

"It must not be imagined that nothing less than a fairly heavy '3½' is sufficient for our needs out here, as such is not the case.

"A man who requires a lightweight four-stroke has little choice other than a New Imperial and a Douglas, and as the present price of Douglas is in the region of £160, there are many prospective buyers who are not in the position to pay such an amount. The consequence is that they must choose between the New Imperial and several of the well-known two-strokes such as the Clyno, New Hudson, Alldays, Allon, and Royal Enfield. Admirable as all these machines are, there are still people who long for more 2½ h.p. four-stroke lightweights."

A FOUR-SPEED SINGLE

P. and M.'s with Four Speeds in 1922. A Road Test of an A.C.U. Six Days Model 3½ h.p. P. and M. Sidecar.

FOR the first time on record the P. and M. team for the A.C.U. Six Days Trials is this year to consist of three sidecar outfits.

This innovation is rendered practicable by the introduction of a new four-speed gear, which is to make its *début* in the classic event, and the four-speed models will be placed on the market very shortly.

The idea of the makers is to offer a sidecar machine which will realise the condition of being a "go-anywhere" mount in the same sense as the two-speed model has fulfilled that condition for solo purposes.

The P. and M. has in the past enjoyed a very excellent reputation as a sidecar machine, its hard pulling, strength, and reliability rendering it unique among low-powered mounts in this respect; but, good as the two-speeder has been, even its most conservative devotees will enthusiastically welcome the addition. The method of introducing the new machine to the public by straightway entering in the most strenuous trial of the year is one which makes sporting appeal, for only those who have driven in these events realise how searching a test they are for heavy outfits of comparatively low power; but evidently the makers are convinced that the additional "complication" does not detract from their original high standard of reliability set up by the P. and M. machines, while, of course, their sphere of usefulness is considerably increased.

Roughly, the principle is this: Two speeds are given by

the selective clutch gear, as in the original model, and the two additional speeds are obtained by driving through the dog clutch gear box instead of directly. Each gear engages in exactly the same method as hitherto—that is, by engagement of the selective clutches, so that it would be possible, if so desired, to pick up from a standstill on any one of the four gears by the engine slowly taking up the load through the familiar expanding ring. While the lever is passing through its motion from one position to another, the dog clutches are engaged or disengaged automatically by the crosswise action—that is, this part of the gear change looks after itself as the lever passes through the neutral position.

The gear lever has two movements, backwards and forwards and inwards and outwards. In passing from first gear to second, the lever is pressed straight forward; in passing from second to third, it comes back, but must be pressed over to the left at the same time; similarly, top gear is obtained by pushing the lever straight forward once more. The backward and forward movement operates the selective clutch gear; the right and left movement operates the dog clutches. Thus, if the gear lever were in second gear position, and it was knocked straight over to the left by a sharp tap of the hand, top gear would be engaged; but in this case it would be necessary to lift the exhaust valve, as the change would be effected simply by slamming in the dog

Four speeds are obtained on the P. and M. by means of a combination of the normal double chain selective clutch gear and a two-speed dog clutch gear box; the normal type P. and M. gear lever operates all four speeds, and there is no separate clutch control.

A Four-speed Single—

clutch. Having become used to the change, however, all sorts of unique liberties can be taken without risk of damage. Though the action is that of a gate change, no gate is included, as it is unnecessary.

The astute will have gathered that the engine can be started with the kick starter either through the high or low chain ratios, accordingly as the gear lever is in the forward or backward neutral position.

On the Road.

Once having grasped the idea of manipulating the lever, nothing could be simpler than this

Ample opportunity of judging the advantages of the P. and M. four-speed gear was afforded during a run over the Sussex downs, which finished with stopping and re-starting tests on a short steep hill in Arundel. The illustrations depict scenes in this historic town.

Now it is simply necessary to engage the third gear immediately the speed begins to flag perceptibly on a hill, and the engine assumes a lively beat, which will carry it over most main road hills. This (the third speed) is a very useful gear, but the second appears less useful. It seems, indeed, that the hill the engine will not take on the third gear is likely to prove a little too steep for the second. The second gear is, however, useful for a long, steep hill, which is, nevertheless, not sufficiently of a freak nature to demand an 18 to 1 ratio. It is more useful in changing up than it is in changing down, for it enables some speed to be attained before changing up on to the higher ratios.

change, which consists of an ordinary gate action minus the complication of an additional clutch control.

Our trial of the machine lay over the unbeaten tracks of the Sussex downs, and, though of comparatively short duration, it was sufficient to convince anyone being familiar with the make that not only do the two additional gears add enormously to the speed and comfort of the outfit, but also that they render it far more pleasurable and less fatiguing to ride. In the past there has been a tendency to juggle with the controls in order to hang on to "top," owing to the big step down.

No great changes in the general layout of the P. and M. machine are observable, despite the fitting of the four-speed transmission. These machines will be used with sidecars in next week's Six Days Trials of the Auto Cycle Union.

IDEAS: Useful and Ingenious.

Detachable Electric Connections.

THOSE who go in for much alternate sidecar and solo work with the one electrically equipped motor cycle find that considerable time is wasted in breaking and re-making the sidecar lamp and, possibly, the battery connections. This idea of making use of push-on spring

Showing how push-on studs, normally used for sidecar aprons, etc., may be used as electrical connections.

studs of the "cloth-to-wood" variety such as are normally used for sidecar aprons, etc.) therefore merits consideration. The studs are simply screwed into the sidecar body, the wires being fitted as shown. Some leakage of current may be expected in wet weather, however.—Miss) R.L.

An Electric Thief Alarm.

FOR those who must often leave their machines unattended in city streets, this suggestion of a thiefproof alarm is much to commend it. It consists of a "concealed" switch for the electric

Diagram of a neat handle-bar thief alarm for electrically equipped machines.

When fitted to the handle-bar grip in such a manner that, immediately the handle is gripped, the horn is set in action. Of course, there is a main switch for putting the device out of action when the machine is in use by the owner.—A.J.K.

Air Leak Preventers.

AS soon as the inlet valve stem begins to wear, an engine loses a certain amount of efficiency through air leaks; a properly constructed air leak preventer, besides sealing the leak, minimises wear by retaining a lubricating

Sturmey-Archer clutch spring boxes make quite efficient valve air-leak preventers.

medium, such as graphite, on the valve stem. In this case a Sturmey gear box clutch spring box has been utilised to hold a felt washer against the valve stem, as shown in the sketch.—G.V.N.

Conversion to M.O.I.V.

DETAILS of a conversion from automatic inlet valves to mechanically-operated overhead inlet valves are shown on the accompanying drawing.

An ingenious conversion from automatic to mechanically operated valve gear.

Beyond the fact that the overhead rocker is set at a slight angle across the frame, the sketch is practically self-explanatory. The existing inlet gear is only slightly modified, and the existing exhaust cam now operates both valves. This idea in its general application might well be adapted to several types of old automatic inlet valve engines in good condition.—A.H.

An Emergency Drip Feed Glass.

D RIP feed glasses are more easily broken than replaced. A satisfactory substitute is an old glass bottle cut off at the end. The cutting process is not difficult if a deep file cut be made where one wishes the glass to break.

How to improvise a sight feed glass from an old bottle is described in the accompanying paragraph.

Then run a red-hot iron all round, when a sharp tap will cause the end to fall away. This done, a rubber band stuck around the bottom forms a good rim grip. When set, it may be secured in position by means of the usual locking nut.—G.H.H.

An Easy Starting Tip.

STARTING is facilitated in the case of engines that have inclined or horizontal plugs by the use of the type of plug that has the central electrode bent over, provided that the plug is inserted in the cylinder in a certain position. This position is with the central electrode pointing upwards (as shown in the sketch), and it may be ensured by previously marking the body of the plug.

It is claimed that with this type of plug this setting gives improved starting.

The reason is that with this type of plug used in the position shown, oil or moisture cannot accumulate at the gap in the same manner that it can with other varieties, or with this pattern, should it be fitted with the central electrode turned down.—E.S.

NEXT YEAR'S T.T.

Important Decision by the Auto Cycle Union.

A Thirty Mile Course in Belgium decided upon.

THE Tourist Trophy races are to be held in Belgium during June, 1922. This important decision was reached by the Competitions Committee of the A.C.U. on the 15th inst. It will be recalled that there has been much discussion in the past with regard to the most suitable course for the classic event. England is, unfortunately, ruled out, since a special Act of Parliament would be required to sanction the race, and it is most improbable that such an Act could be carried through. Ireland has been suggested, but the state of the country is not encouraging at the present moment. Thus, the choice is limited to the Isle of Man or a Continental country.

The former place has always been selected in the past, and the Manx course has been looked upon as an inseparable part of the Tourist Trophy races. Nevertheless, there are several reasons why a change has been considered. It has been stated that modern machines are too fast for the course, but there is no unanimity on this point. In addition, the event has not received the wholehearted support of all the Island inhabitants.

Therefore, it comes as no very great surprise to find that the invitation of the *Fédération Motocycliste Belge* has been unanimously accepted by the A.C.U.

Details of the New Course.

The new course is about 50 km. (31¼ miles) in length, and was recently inspected by the Secretary of the A.C.U. It starts just outside Spa, where the grandstand will be erected, and climbs the long 5 km. (3¾ miles) hill referred to in our report of the Belgian Grand Prix as "one of the longest and straightest hills we have ever seen." It touches the course utilised on the 9th inst. near Malmédy, and, climbing all the time, turns a corner and finally reaches the summit, Baraque Michel (formerly in Germany), over 2,000ft. above sea level, a higher altitude than the summit of the road over Snaefell. It then passes Jalhay, and, steadily descending, with two hairpins near Hoigne, reaches Spa again. The country is undulating and wooded, extremely beautiful, and has wide, broad roads as smooth as wood-paving. The summit at the Baraque Michel is open moorland country.

The new course may be described as fast and safe, and there will be many opportunities for rapid acceleration. So far as the conditions of the race are concerned, these will be exactly the same as this year. There is a Senior race for motor cycles with engines not exceeding 500 c.c., a Junior race for motor cycles with engines not exceeding 350 c.c., and a special class for 250 c.c. engines. This latter class, inaugurated for the special encouragement of lightweight motor cycles by *The Motor Cycle*, which journal has always offered a special trophy, will be given more prominence

than has hitherto been the case. The organisation will remain entirely in the hands of the A.C.U. of Great Britain, though doubtless the hearty co-operation of the officials of the F.M.B. will be utilised. The municipal authorities at Spa and the Belgian Government are lending their assistance, and we understand that 1,000 troops to patrol the course are to be placed at the disposal of the A.C.U.

Special facilities have already been secured, including favourable assurances as regards railway and steamship services by the G.E.R., concessions in respect of Customs, and special fixed tariffs to be charged by the hotel keepers in the Spa neighbourhood.

Interview with the A.C.U. Secretary.

As may be imagined, we found Mr. Loughborough, who has lately returned from the Continent, to be extremely enthusiastic regarding the running of the T.T. in Belgium. In answer to our question, "Who is responsible for the idea?" he replied:

"I really cannot tell you. The matter was discussed at some length by the Management Committee and the decision was a matter of general agreement."

"Why do you not run the race in the Isle of Man again?" we ventured.

"In the first place, the course is not suitable for 500 c.c. machines, as was clearly evidenced by the fact that this year a Junior machine won the Senior race. Secondly, it is not putting it too bluntly to say that we were somewhat bled by the Manxmen. We were not our own masters, while you know as well as I do the difficulty of transport and absence of any concessions by the I.O.M. Steam Packet Co. Thirdly, and lastly, there is to be a Car T.T. this year, and this would have meant either holding the race early in May or not until September, while if the latter date had been chosen the roads would have been badly cut up by the racing cars."

"Why did you choose Belgium?" we queried.

"Simply because we were looking for the most central spot in Europe within easy reach of all countries interested in motor cycle racing. Spa is easy of access from Holland, France, and Switzerland, and is more comfortably reached from England than the Isle of Man. I would like you to say," stated Mr. Loughborough, "that almost all the members of the trade to whom I have spoken about the idea are distinctly in favour of it. I think it highly desirable that our motor cycle trade with the Continent should be encouraged, and I am sure there is an enormous field of the resources of which have as yet hardly been touched."

* * *

Some important opinions upon the decision of the A.C.U. to hold next year's T.T. in Belgium will be found on another page of this issue.

Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

FOR THE BOY STILL AT SCHOOL.

Sir,—With reference to the letter received by you from "Public School Boy," I should like to point out that my club caters especially for the boy still at school. He pays no entrance fee and only half subscription. As many events as possible are run during the holidays. During the present holiday we have a handicap race at Brooklands (August 7th), a night trial (September 3rd), and a social Sunday run (September 11th).

H. R. BROWNING,
Hon. Sec., Public Schools M.C.C.

UNDERSIZE TUBES FOR OVERSIZE TYRES.

Sir,—I burst an inner tube on my new sidecar when riding without anything going wrong with the outer cover, and on examination I found the size of the tube to be too small. A 700×80 mm. size, the tube measures on the flat barely 3in., and other tubes of the same make and mark measure 3½in. I have taken the matter up with the makers, and find they have reduced the size of the tubes, and only with difficulty have I been able to get tubes of the proper size for 700×80 mm. tyres.

I have tried one of these standard tubes by inflating it without expanding it, and it measures 2in. across, but an mm. tyre is over 3in. on the outside. This shows a great expansion on the tube, and it is no wonder that they burst.
COMMONSENSE.
Barry.

LEGALITY OF "DUST MULCHING."

Sir,—Our good friend, "Ixion," in his "Occasional Comments" recently refers to the cyclotraceur race from Putney 11 to Wisley Hut, and says that, as the device cannot exceed 20 m.p.h., the "race" was perfectly safe and legal. I think he must have forgotten the Highway Act of 1835, which prescribes that it is an offence for any person to play football or any other game on any part of the highway to the annoyance of any passenger or passengers. With the machines themselves, the escorting fleet of motor cars, and other attendants and circumstances, it would not likely be difficult to prove the annoyance.

It is also an offence under the same Act to lay any timber, stone, lime, soil, ashes, rubbish, or other matter or thing whatsoever upon any highway to the injury, interruption, or personal danger of any person travelling thereon, and it is in time the institutions which look after our interests took proceedings under the Act against persons, whoever they may be, who lay thick carpets of dust and other such obstructions on our roads.

DOUGLAS LEECHMAN.

THE LAW AND THE LONG EXHAUST PIPE.

Sir,—With reference to the letter from "Fed Up," in your issue of the 11th inst., if the writer is so foolish as to sell his 3½ h.p. Norton on account of it being fitted with a straight exhaust pipe and fishtail muffler, that is his own affair. He may not be aware, however, that there are hundreds of Nortons and Sunbeams on the road fitted with this type of exhaust, the owners of which have never been interfered with by the police. "Fed Up" apparently had the misfortune to encounter an extra officious constable; but that is no reason why he should condemn his machine. Even riders of standard Triumphs have been prosecuted before now on account of the exhaust arrangements of their mounts.

As a matter of fact, it was recently reported in your paper that a summons against a Norton owner was dismissed, as

the Court held the view that the large diameter long exhaust pipe and fishtail muffler in question constituted a silencer. Anyhow, it is not a very difficult matter to fit an expansion chamber of the usual type to a Norton, and "Fed Up" could get this done at any good garage.

As regards the letter from the gentleman who calls himself "The Owl," perhaps the writer would be so good as to inform us how he would propose to get the same degree of silence from a single-cylinder air-cooled unenclosed engine running at a high number of revolutions as from a six-cylinder water-cooled engine which is boxed up in a bonnet, and which is turning over at a fairly moderate speed?

A. ARNOLD.

DERBYSHIRE AS A TOURING GROUND.

Sir,—I was pleased to notice Mr. A. R. Innes-Smith's appreciation of Derbyshire scenery in a recent issue of *our* paper, and I should like to extend to all motor cyclists a hearty invitation to visit the county.

I have toured Wales on a push cycle and on foot, and the Lake District also on foot; but I always feel that I have a long way to go to beat my own county.

To my mind, the secluded beauty of Dovedale, the massive grandeur of Monsal Head (of Ruskin fame), and such places as Hathersage and Hope are ideal. When travelling, I avoid main roads, since I find the surfaces of the byroads are excellent. I find, however, many severe gradients, long climbs, and freak hills; but I have yet to find the hill that my 3½ h.p. Ariel sidecar will not surmount. Prospective visitors need not, therefore, be afraid of the hills. There is, as your contributor says, usually a choice of a rush up a veritable house side, or of a long strenuous second gear climb.

The county abounds with hotels and country inns, at which one can usually find accommodation. Signposting, however, is not of the best.

CH 1588.

Derby.

PUNCTURES NOT A ONE MAN TASK.

Although fitted with 28×3in. tyres, the Indian, which belongs to Mr. J. J. Shaw, of Sheffield, looks decidedly under tyred in comparison with the mammoth 1,500×300 mm. Palmer cord on an aeroplane wheel.

WHICH IS THE MOST SILENT MACHINE?

Sir,—I thoroughly endorse "The Owl's" views on silence. In my opinion, the value of a mount is much enhanced by its (comparative) silence. My experience of silent machines is mostly confined to towns. I consider the Zenith easily the quietest, with its long wide bore exhaust pipe, and its beautifully mellow note. Surely the note of an exhaust is almost as important as the volume of its sound. I place the $3\frac{1}{2}$ h.p. Sunbeam next. When going slowly the engine seems to be pumping from a deep well, from its sound. Four-cylinder machines are, of course, very silent. I have not noticed the new Humber, which has a great reputation for quietness. I may add that Zeniths are extremely popular here, as is also *The Motor Cycle*—only more so!

Cambridge.

M.E.L.

Sir,—In reply to your correspondent "The Owl," who asks which is the most silent machine, I should say, in my humble opinion, that the P. and M. fitted with a 1919 pattern silencer would take some beating.

The P. and M. has no gear box to make any noise whatever, and as the chains are enclosed and oiled automatically from the engine these give out a minimum of sound.

A friend of mine who has owned two Triumphs, two Nortons, a Sunbeam, and a Bat-Jap, came a spin with me on my P. and M. sidecar some little time since, and he declared that the P. and M. was the most silent and the most "perfected motor cycle" he had ever ridden. He now owns a new P. and M. himself.

I have no interest with Messrs. Phelon and Moore, other than being a very satisfied owner.

P. AND M.

Wolverhampton.

STRIKING MODERNISATION.

Sir,—Accompanying are illustrations of an old-fashioned machine that came into my possession in 1915, which I have since entirely redesigned and endeavoured, as nearly as possible, to bring up to date.

As can be seen, it was a single-cylinder $2\frac{3}{4}$ h.p. Kerry, with battery and coil enclosed in the forepart of the square tank.

I first of all scrapped the tank, and, having sawn off the saddle-pillar lug from the frame, bent the top tube down

Remarkable modernisation: (left) before and (right) after Mr. A. M. Wright's re-building of a $2\frac{3}{4}$ h.p. Kerry, which he describes in the accompanying letter.

until it suited the angle of the new lug I obtained (in order to lower the riding position to conventional proportions), and, having unbrazed the rear forks, I shortened and reset them to suit.

I next obtained a tank of the straight cylindrical variety, the rear end of which I sliced off, and having cut certain of the metal away along the top, lapped and resweated it together, making it to fit my redesigned frame.

The first problem was to stop the side play of the front wheel, which, being mounted on the old rocker system, persistently wore the rubber from the tyre walls by rubbing the forks just below the fork crown.

This was successfully checked by fitting extra forks (shown in illustration), which move up and down with the wheel, but are prevented from moving in any other direction by sliding inside a short tubular guide, pivoted between two plates securely bolted to the crown clip with the existing bolts. The spring was suited to take the extra weight of the twin engine the reconstructed machine was to carry.

I next turned my attention to the rear portion of the machine, being determined to design a sprung carrier which

could claim to be a portion of the machine and not a clipped-on accessory.

I first of all bridged two tubes with a 12 gauge strip of steel, and then forked the lower ends to clip on the rear wheel spindle. To this bridge I attached half of the rear mudguard, and secured the rear stays to the fork ends. I then bridged two more tubes in the same way, these being made to slide in the former, and, having slipped a coil spring on each side before inserting the sliding tubes, I had the foundation of the carrier, which, pivoting on a special pivot mounted to the

Details of the spring carrier fitted to Mr. A. M. Wright's 5 h.p. Meteor, late $2\frac{3}{4}$ h.p. Kerry.

saddle clip, moves up and down on the sprung tubes without any sign of side play. The whole is so arranged that on loosening the rear spindle nuts and slightly expanding the carrier forks, to disengage two washers specially designed to lock the fork to the spindle, the entire unit can be raised right over the tank, bringing up

the rear half of the mudguard with it, thus giving access to the rear tyre. The saddle I hung from two lugs on the carrier, as shown.

Having completed the frame, the next problem was fitting the Rex engine. I had some difficulty in finding a place for the magneto without further structural alterations to the frame or engine. However, I conceived the idea of placing it in the unconventional position shown in the illustrations and running it from a countershaft mounted through the old pedalling gear bearings, the drive from the engine just centring there to a nicety, the only drawback being lack of adjustment for the primary chain, which, however, has given no trouble up to the present. At the time of writing, the machine has no gear or clutch, being purely a sporting mount.

The engine is 5 h.p., with direct drive by leather belt. The whole machine as it stands weighs only 193 lb.

A. M. WRIGHT.

DEFENDING THE HINGED FORK.

Sir,—With reference to that portion of the letter signed "Warum," in your issue of August 11th, relating to the design of front forks, your correspondent asks for a defence of the type fitted to the Beardmore-Precision, because the fork is hinged at the crown.

We would ask him to note that when a fork is so constructed there is only one journal bearing, and that structurally the bicycle is as rigid as though it were unsprung, and that the bearing

is of such proportions as to resist wear.

There appears to be a misapprehension in the minds of many motor cyclists as to the functions of springs on vehicles. The object of the spring should be to damp out road vibration at the point of contact of the wheel with the ground. If it were possible to do this without any joints at all, as in a four-wheel vehicle, it would be an advantage, but, failing this possibility, the designers should endeavour to reduce the number of joints to a minimum.

Successful springing is accomplished by as nearly as possible keeping the unsprung weight to the wheel itself, and can only be obtained when the spring has sufficient amplitude to give a slow action and a correspondingly slow reaction. Springing devices in which short spiral springs are used, whether in conjunction with links or a rocking motion, are open to objection because of the quickness of the action and reaction which prevents the road shocks being wiped out.

In racing machines, whatever the type of springing adopted, the general practice is to use such strong springs and joints as to bring the machine to an approximately rigid type.

FRANK E. BAKER, Director,
For F. E. BAKER, LTD.

GUINEAS OR POUNDS?

Sir,—The attitude of motor cycle manufacturers on this matter reminds one of King Charles II.'s questions to his Court Physician:

"Pray, sir, can you tell me
Why all physicians take
A guinea for their fee.
When we no guineas make?"

and of the doctor's reply:

"The answer, sire, is plain,
They're loyal and unwilling
That a Sovereign e'er again
Should be left without a shilling!"

as was often the case with the Merry Monarch during his
in the Commonwealth period. MEDICUS.
Brackley.

HERE ARE THE SPRING FRAMES?

Sir,—The letters on the above subject from "Old Timer" and other correspondents are very interesting, as are the remarks on motor cycle comfort, or rather the lack of it, from our able contributor "Ixiou."

Having owned machines of many different makes, I have come to the conclusion that the riding position has fully as much effect on comfort as have springs.

At one time I owned simultaneously two British sidecars (fits, and although the equipment of both was practically identical (as far as provision for comfort went), yet the riding position of outfit "A" was so infinitely better than that of "B" (a machine of very famous make) that I could ride a long journey on the former without the least discomfort, when similar distance on the latter would leave me tired out, with muscles stiff and aching.

The more machines I ride, the more am I convinced that if manufacturers would pay more attention to this question of riding position we should hear far fewer complaints on the scores of bad roads and discomfort.

J. T. SHILLITO.

Sir,—Since writing to *The Motor Cycle* asking for your readers' opinions of spring frames I have purchased a P.V., with Blackburne engine.

The rear springing is most luxurious, and is a revelation after riding a rigid frame. Its appearance is pleasing—in fact, a second look is necessary to see that it is a spring frame. There is an absence of shackles and other impedimenta to jar and rattle, and the frame is so constructed that it is absolutely rigid laterally, and the makers guarantee it to be so from side play for all time.

Cornering is as easy as with a rigid frame, and steering is perfect at speed. The whole machine is sprung, and not just the footboards and saddle.

To the man requiring comfort, and who knows a sound engineering job when he sees one, the P.V.-Blackburne or J.P. will appeal.
OLD TIMER.
Laxmudham.

MANUFACTURERS AND THE A.C.U. SIX DAYS TRIAL

Sir,—After reading your article on the above, it is fairly self-evident why several manufacturers are not supporting the trial. I think that "funk" sums the reasons up. It would appear that when the regulations of a trial are lax and there seems a fair chance of 90% of the entry obtaining "golds," the makers support it, and only those whose productions figure amongst the 10% of failures grouse, but when the regulations are stricter, so that it seems that only 20-30% will obtain "golds," which is as it should be, the makers shy.

In last year's "Six Days" some steep hills were included which accounted for most of the failures—very largely owing to bad driving—and the makers raised a shout against freak hills. This year the Union has decided to include tests of a technical nature in place of these hills, so that the onus of failure will hear more on the maker than on his jockey. Since (long exhaust pipes and Kingston police court); bikes (when will the horse-shoe front brake finally be scrapped?); petrol consumption (120 m.p.g. in advertisements and 80 m.p.g. on the road). If the makers are frightened, let them stay out of the trial, but why do they advertise their fear of failure by making a fuss? Besides, destructive criticism is not very difficult of accomplishment.

F. H. BEVAN.

Sir,—The silence test has given a lot of dissatisfaction among manufacturers, who fear the personal prejudices of the expert judges, in whose minds certain makes may be unconsciously doomed beforehand.

Would not a good compromise be for the judges to be five or six absolutely independent gentlemen, who had never ridden a motor cycle and had no knowledge of its mechanism? They could sit with their backs to the passing machines and simply record their opinion against a number.

This would be judging the machines from the standpoint of the public, and it is the public who object to the unusually noisy motor cycles, more so than the riders, the latter seldom hearing much of the noise of their own exhaust.

FRANK WHITWORTH.

Sir,—As "Ixiou" points out, this year's A.C.U. Six Days Trials are to show what modern motor cycles can do, and I think that a manufacturer who does not support them, unless he has some very good reason, as good as owns that the test is too much for his machine. This year's trial is going to be of great use to the potential buyer, for a machine securing a gold will have done a great deal to prove its efficiency.

Now, looking through the list of entries, I see there is only one Triumph entered, and that by a private owner. Is it too much for a Triumph? As a private owner, I say No! But why has it not got the Triumph Co.'s support? I am very glad to see Triumphs back again in trials and races. Was it bad luck or lack of organisation that lost them the Grand Prix? If they had paid more attention to details, such as oil tanks, would they have won the T.T.? What is preventing the manufacturers of Sunbeams, Brough-Superiors, Scotts, Raleighs, and all the other makes which have not entered? Is it too much for all of these? I think it is a great pity that just when the A.C.U. has organised a trial which will do some good the trade fail to support it. My congratulations to the A.C.U. for its splendid trial to be; also, good luck to the plucky little Hawkers.

London, N.12.

TRIUMPH MC 8209.

IN THE SHADE OF THE PALMS.

A reader in Alexandria, Egypt, forwards the above pleasing little snapshot of his daughter with a Triumph outfit on the Alexandria-Cairo road.

CHAIN STRAPS FOR LEGGINGS.

Sir,—I notice that "Ixion," in his "Comments," deplors the use of leather as instep straps on waterproof leggings, and wonders if any genius can devise a better method of fastening the aforesaid leggings.

Not being a genius, but still living in hopes, I wondered if he had thought of trying a light chain, as used on spurs, in place of the strap. The chain would be passed under the instep and hooked on to metal studs set in the material of the leggings, and the studs in turn would have to be backed with leather to prevent them wearing the footwear.

I hope that his idea may relieve his mind and also be of some real use to him.

Southport.

D'A.S.G.

TWENTY-THREE YEARS AGO.

Sir,—Following the letter published by you from Mr. Percy Richardson in your issue of the 4th inst., we enclose herewith a photograph of a Royal Enfield machine manufac-

Referred to in the accompanying letter from the Enfield Cycle Co., Ltd., this lightweight—a "heavyweight" then—was in 1902 the leading model of the company.

tured by us in 1902, which, we think, will be of interest to your readers, illustrating as it does the vast strides made by motor cycle manufacturers during the past twenty years.

THE ENFIELD CYCLE CO., LTD.

WHAT THE A.C.U. HAS DONE.

Sir,—The letter of your correspondent Mr. Bernard Siffken, appearing in your issue of August 18th, calls, I think, for some answer, as quite a wrong impression may be gathered regarding two points with which he deals.

On the subject of taxation, it is entirely wrong to imply that the Auto Cycle Union put up no fight on behalf of motor cyclists. Whatever criticisms may be offered respecting the present regulations, there can be no question that the present taxation of motor cycles would have been on a much more unsatisfactory basis but for the pressure brought to bear on the Government by the Auto Cycle Union through the Motor Legislation Committee. The modifications of the very drastic scheme originally proposed by the Government were only secured because the Auto Cycle Union, in co-operation with the Manufacturers' Union, was able to present a single and undivided expression of view, which was finally adopted *in toto* by the Ministry of Transport.

When one remembers that the Government originally proposed to tax motor cycles on a horse-power basis, calculated on the bore of cylinder, or cylinders only, and, when this was defeated, endeavoured to impose a minimum annual tax of £5 and later £3 on all motor cycles, it will be appreciated that the concessions secured by the Auto Cycle Union are very real. It was only after a long and strenuous struggle that the 30s. tax for machines under 200 lb. in weight was secured, and by constant pressure up to the last minute in the House of Commons that the scale applicable to a light sidecar was reduced from £4 to £2 10s. I gladly acknowledge the excellent work which Major Stenson Cooke accomplished, but to imply that the Auto Cycle Union did nothing in the matter as Mr. Siffken appears to, is entirely wide of the facts.

Your correspondent's assertion that "while the A.C.U. loses 40% of its membership, the A.A. still forges ahead," is also unjustified. Is it not a fact that since the A.A. raised

its subscription its motor cycle membership has also decline. Your correspondent would not, I think, find any satisfaction in the fact from the motor cyclist's point of view that the increase of the A.A. membership is entirely accounted for by car members. I think he will admit that motor cyclists should be looked after by a motor cycling body, and the only organisation whose efforts are entirely devoted to that object is the Auto Cycle Union.

T. W. LOUGHBOROUGH, Secretary
The Auto Cycle Union.

DO TWO-STROKE CYLINDERS WEAR RAPIDLY?

Sir,—It may be of interest to owners of Villiers two-stroke engines to know the way in which I cured mine of the objectionable hissing noise when wheeling the machine. All I did was to take the valve cage from the top of the cylinder and drill three $\frac{3}{16}$ in. holes in it. The engine is almost quiet now, and no harm has been done to the cage.

It would be interesting to know if two-stroke cylinders wear as well as four-stroke ones. Having so many holes in the ports, I should hardly think that a two-stroke cylinder would wear round and parallel for the same length of time as a four-stroke.

W. J. STEVENS.

SUMMARY OF CORRESPONDENCE.

We have received a number of letters testifying to the genuineness of the offer of the Elite Rubber Co. to refund the purchase money to every hundredth customer.

"G.C." (Aberdeen) feels that he is speaking on behalf of every competitor in the Scottish Six Days when he expresses his thanks to the organisers of the Pratt's petrol service throughout the trial.

"L.S.O." (Birmingham) describes a ride from Birmingham to Llandudno and back on a B.S.A., which he completed in well under twenty-four hours.

Miss Maud Nelson, 7, Effingham Road, St. Andrew's Park, Bristol, wishes to return a pocket knife to the driver of the Harley-Davidson sidecar who repaired the rear tyre of her Martinsyde outfit on the road near Camelford recently.

"Scott" complains that drivers of large private cars are generally less ready to dim their glaring head lamps on meeting other vehicles than any other class of road user.

Mr. Geo. Gill describes a 300-mile holiday trip, which he accomplished three up on—a 5-6 h.p. Bat-Jap sidecar—in seventeen hours, and the return journey over the same distance in one hour less.

Regarding the article in *The Motor Cycle* of August 11, describing "A Refined Sporting Mount," Mr. George Brown writes: "If the 'British sporting big twin' referred to is the Brough-Superior, I wish to state that the designer of the lightweight machine above referred to did not evolve the Brough-Superior. He was employed by me as a draughtsman in the ordinary way, and his duties were to put my designs on the drawing board."

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Priced net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 2/3.

"MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4., or of leading Booksellers and Railway Bookstalls.

Questions and Replies

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

OVERHEAD VALVES.

In what way, as regards efficiency, do overhead valves differ from side-by-side?—M.J.

Overhead valves permit a more symmetrical design of the combustion chamber, and is also possible to design the ports much more efficiently than is the case with side-by-side valves, thus permitting a freer flow of gas to and from the cylinder.

TWIN MAGNETO FOR SINGLE.

I have recently bought from the Aero Disposal Board a magneto suitable for a flat twin. I took off one of the cams inside the brass ring and removed the corresponding brush, and have now fitted it to a single De Dion tricycle. Will the very short cam piece be detrimental to the efficiency of the magneto, and would it be advisable to fit a longer one?—G.L.

A longer cam which would keep the points open through about 200° would be better. The leading edge should be in exactly the same position as the leading edge of the short cam. The short cam may result in the spark disappearing at high speeds.

ACTION OF ACETYLENE ON COPPER.

Can you give me any information with regard to the action of acetylene gas on copper piping? I have heard one or two people say that it causes a very highly explosive mixture to be formed. They say this with a profound air of mystery, which denotes the impossibility of allowing the general public to share this great secret. I may say that I have used it myself, and also seen others use it without any serious results. —W.J.

The compound to which you refer is acetylene copper acetylide. It is very doubtful whether this can be formed by passing acetylene gas over the metal copper, especially on such a small scale as obtains in the use of copper tubing on a motor cycle acetylene lighting outfit. The writer has used copper and brass tubing indiscriminately for a number of years without experiencing any trouble. At low engine revolutions.

RUNNING ENGINE ON STAND.

The exhaust pipe gets red hot when I run my single-cylinder B.S.A. on the stand for three or four minutes, but I notice no difference in the running.—S.W.

Three minutes is too long to run an engine on the stand. The trouble may be due to the exhaust valve not seating properly in the cylinder. It would be best to remove it and examine the condition of the face; if it is badly mitted, have it trued up and grind it in again; also make quite sure that the ignition is not permanently retarded.

Important Dates.

Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept 3rd A.C.U. Six Days Trial.

Thurs., Sept. 8th—Norfolk M.C. and L.C.C. Open Speed Trials.

Sat., Sept. 10th—Liverpool M.C. Open "Reliance Cup" Trial.

Sat., Sept. 17th—Grand Prix Races for Cycle Cars.

Sat., Sept. 17th—Midland Centre A.C.U. Open Hill Climb.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Sat., Sept. 24th—M.C.C. Sporting Trial.

Sat., Oct. 1st—Doncaster and District M.C.C. Open Speed Trials.

Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

LIGHTWEIGHT TYRE SIZES.

The wheels of my lightweight were fitted with 24 x 2in. tyres.

(1.) Will 24 x 2½in. British standard size be suitable? (2.) Is there any difference between 24 x 2½in. tyres to fit 24 x 2in. rims and 24 x 2½in. tyres to fit 24 x 2½in. rims?—R.T.

(1.) There should be no difficulty in fitting 24 x 2½in. tyres to your rims. (2.) A 24 x 2½in. cover to fit 24 x 2in. rim is an oversize tyre, while 24 x 2½in. is the correct size for a rim of the same width.

BACK DRAUGHT OF SIDECAR.

I have an 8 h.p. Enfield which is fitted with a large two-seater (side-by-side) sidecar body, which comes very near the driver. I have a curved windscreen, and am troubled with dust, which seems to follow the sidecar and comes over the back on to the passengers. I have not noticed other machines to be afflicted in the same way.—E.H.S.

The trouble you describe is a fairly common one, and we do not know of any ready means of curing it. It is caused by the partial vacuum created when the machine is travelling forward at speed. This draws the dust in behind the sidecar.

SLIPPED OR STRAINED MAGNETO DRIVE.

Recently I had the misfortune to break one of the gudgeon pins of my 8 h.p. J.A.P. engine, causing the piston to smash also.

I have now fitted another one and cleaned the crank case out, by removing the sprocket wheel side so as not to interfere with the timing, and placed everything together again. I find now that what was the advanced position of the ignition lever is the retard, and I cannot understand how this has occurred. The engine fires regularly enough, and compression is very good, but I cannot get enough speed to pull any weight. The magneto is shaft-driven, and is placed in the tank. When I get the machine, to advance I had to pull the lever up; now I have to push it right down as low as possible. I can only get a start with it right down. If I pull the lever up the engine stops.—R.F.

If you did not dismantle the timing gear, there is absolutely no reason why the variation you speak of should have taken place unless one of the pinions slipped or the shaft twisted when the piston broke. Undoubtedly the magneto drive has been disturbed in some way, and you should verify the timing and alter it if necessary. The spark should occur when the piston is at the top of the compression stroke, with the control lever two-thirds retarded.

HARDENING CRANKSHAFT.

Q. I have a two-stroke engine which has white metal bearings, and a crankshaft which, according to the makers, is a stamping. The bearings, in spite of copious lubrication, wear very quickly. Can you inform me if it is possible to have the crankshaft hardened, and phosphor bronze bearings fitted? I have been informed by friends that it is not possible, because the crankshaft would be distorted.—A.F.P.

It would not be advisable to have the crankshaft hardened in its present state, as the usual method is to harden such parts before the final grinding, in order to correct any slight distortion which may have taken place. It would be worth while, however, having phosphor bronze bearings made for use in conjunction with the existing shaft.

GEAR BOX HUM.

Q. (1.) What is the cause, and cure, of a loud whirling sound that is emitted by the Sturmey gear box on my Triumph when coasting with the clutch engaged and the gear in neutral? The same noise also occurs on throttling down when running in bottom or second. (2.) Should, when changing from middle to top, or running very slowly on top, the engine labour and snatch at the transmission? Most decided jerks occur at these times?—M.J.

(1.) The noise you mention is the customary sound associated with gearing of the type used in this gear box. If it is excessive, it may be that the gear box requires lubrication. It should be filled up to the level of the oil hole with the same kind of oil as used in the engine. (2.) You should not attempt to run too slowly on top gear, and before changing from middle to top you should accelerate the machine up to about 10 m.p.h.

FRICTION DRIVE FOR CYCLE CAR.

Q. (1.) Is friction drive, properly applied, suitable for a three-wheeler runabout on Morgan lines? (2.) Would a 13in. diameter driving disc and a 12in. driven disc be efficient, the 13in. driving discs to carry the friction material and the driven disc just a plain aluminium wheel with a rim face about 1in. wide? (3.) Are 700×80 mm. tyres when on wheels approximately 27½×3½in.? (4.) Which would you advise me to use on a three-wheeled monocoque, friction drive or a two-speed gear arrangement on the Morgan principle?—H.W.B.

(1.) No doubt friction drive would be perfectly satisfactory if correctly designed. (2.) The dimensions of the driving disc would be in order, but it is usual for the driven disc to be the larger to carry the friction material. This usually consists of a pack of paper or fibre rings, having a total width of about 1in. (3.) The inch sizes which you give are approximately correct. 700×80 mm. tyres are fitted to 650×65 mm. rims. (4.) We cannot advise you on this point, as the choice of the gear depends almost entirely on what you require of the vehicle and to the manufacturing facilities you have. Probably the two-speed arrangement would involve the least experimental work.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned. "A.P.H." (Waterloo).—1915 four-cylinder Henderson: Lubrication, carburation, adjustment of two-speed hub gear, etc.

Miss A. B. L. (Buxton).—Ner-a-car: Reliability, comfort, climbing, starting, and ease of handling.

"D.M." (Sheffield).—Norton, Model 16H: Consumption, speed, comfort, and reliability.

"N.A." (Bournemouth).—Scott Sociable: General experiences.

"S.G.W." (Middlesbrough).—W.S.R. variable jet on Triumph carburetter.

"F.F.E." (Plumstead, S.E.18).—6 h.p. Martinsyde and 5-6 h.p. Raleigh sidecar outfits: Especially reliability and workmanship.

"L.S.L." (Brondesbury, N.W.2).—2½ h.p. Wooler: Wear of belts on variable gear, reliability, and do springs "bottom" with pillion passenger.

"W.L.R." (Torrington).—3½ h.p. Norton, Model 16H, with sporting sidecar: Speed, economy, and general reliability.

RECOMMENDED ROUTES.

IPSWICH TO BRADFORD.—F.G.H.

Ipswich, Needham Market, Stowmarket, Bury St. Edmunds, Brandon, Stoke Ferry, West Dereham, Stradsett, King's Lynn, Long Sutton, Holbeach, Fossdyke, Swineshead, Sleaford, Newark, Retford, Doncaster, Wakefield, Ardsley, Dudley Hill, Bradford.

HADLEIGH TO SWANAGE.—E.W.S.

Hadleigh, Kersey, Sudbury, Halstead, Braintree, Great Dunmow, Takeley, Bishop's Stortford, Hadham, Ware, Hatfield, St. Albans, Watford, Rickmansworth, Denham, Slough, Maidenhead, Reading, Theale, Aldermaston, Brimpton, Kingsclere, Whitchurch, Andover, Salisbury, Coombe Bissett, Blandford, Spettisbury, Lytchett Minster, Wareham, Swanage.

EDINBURGH TO LONDON.—D.W.A.

Edinburgh, Fushiebridge, Heriot, Stow, Galashiels, Melrose, Newtown St. Boswells, Jedburgh, Carter Bar, Rochester, Otterburn, Belsay, Ponteland, Newcastle-on-Tyne, Gateshead, Sunderland, Houghton-le-Spring, Ferryhill, Darlington, Stapleton, Barton, Scotch Corner, Catterick, Leeming, Ripon, Ripley, Harrogate, Spofforth, Wetherby, Aberford, Ferrybridge, Doncaster, Bawtry, Retford, Tuxford, Newark, Grantham, Stamford, Wansford, Peterborough, Norman Cross, Stilton, Alconbury Hill, Buckden, Eaton Socon, Biggleswade, Baldock, Stevenage, Welwyn, Hatfield, Potters Bar, Barnet, Tally Ho Corner (Finchley), Ballards Land, Regent's Park Road, Finchley Road, Swiss Cottage, Finchley Road, Wellington Road, St. John's Wood Road Station, branch left, then right into Park Road, from fork bear right into Upper Gloucester Place, Gloucester Place, Portman Square, Portman Street, Oxford Street, Marble Arch, Hyde Park Corner. Approximately 406 miles.

Competitions in Ceylon.

A reliability trial was held in July on the most rugged and rough roads in the interior of the island, and it was agreed that it was one of the most severe and difficult tests ever held in Ceylon. The Ariel riders were successful in winning the cup presented by the *Times of Ceylon* for the best team performance; and one of the team also secured the cup presented by Cargills, Ltd., for the best individual performance.

More Price Reductions.

Velocette two-speed models are now listed at £55.

Autoglidors, also, are not only reduced in price, but are to be fitted with a clutch, which was formerly listed as extra. The prices are now: Model £40 (formerly 40 guineas, less clutch), Models B and E, £53 (57 guineas, ditto), Models C and D, £50 (55 guineas, ditto), and *modèle de luxe*, £65, all on 4 guineas, ditto).

A reduction in price of the Astra permanent magnet dynamos for motor cycle lighting has been effected. The 4 v. 3.4 amp. type is now offered at £5 10s. and the 6 v. 5 amp. type is £7. The complete outfits are reduced by £1 and £1 10s. respectively.

Found on the Road.

A left-hand fur gauntlet glove was found near Sherborne by Mr. S. J. Barker, of 49, Weston Grove Road, Woolston, Southampton.

Mr. A. G. Parker, of 503, Redding Lane, Hall Green, Birmingham, found a tool-kit near Stafford, while another tool bag with contents was picked up near Kingscote, in the Cotswolds, by Mr. Sachan, of 681, Wandsworth Road, London, S.W.8.

The Auto Cycle Union has recovered a licence card in its holder, evidently lost from a Triumph sidecar outfit. It was found on the Watford Road, near Bushey; and, if the loser will forward the number of the licence and other particulars for identification to the secretary, 83, Pall Mall, London, S.W.1, it will be restored to him.

A sidecar hood was picked up by Mr. W. N. Clinton, of 76, Church Street, Woking, last week-end on the road running from West Clandon to the Portsmouth Road.

Catalogues Received.

Barimar, Ltd., 10, Poland Street, London, W.1: "The Welding Test," booklet describing the Barimar process of welding broken cylinders and other castings.

Rudge-Whitworth, Ltd., Sparkhill, Birmingham: A book convenient for the pocket, and of immense use to engineers and designers, is the latest list of Rudge-Whitworth ball bearings. Prices, sizes, loadings, and notes on their application are most clearly displayed.

CLUB NEWS

*At a Public
School M.C.C.
Hill Climb.*

Worcester and District M.C.C.

Open to all clubs in the Western Centre A.C.U., speed trials will be held on Friday, commencing at 3 p.m., on the Bradfield Court Drive.

Birmingham M.C.C.

On Saturday next this club is holding its second annual gymkhana at the Castle Bromwich aerodrome. The whole of the proceeds from the sale of tickets and receipts from entry fees will be given to local charities.

Widnes M.C.

Held over a course of seventy-one miles, a keenly contested reliability trial which took place recently for the Blake Cup resulted as follows:

1. A. J. Sandland (8 Morgan), cup and gold medal; 2. H. Baldwin (4 Norton sc.); 3. W. Watling (4 Harley-Davidson); 4. I. H. Fletcher (4 Triumph).

Leamington and District L.C. and M.C.C.

On Wednesday evening, the 17th inst., the club held its first reliability trial. Despite bad weather, a fair number of competitors turned up. The winner was S. Robinson (2½ Wooler). Anyone wishing to join this club should apply to the hon. secretary, Mr. F. F. Hickman.

Wolverhampton and District M.C. and L.C.C.

Below are full results of the recent successful hill-climb on Plough Hill, which was open to all affiliated members of the South Wales Centre A.C.U. The best time of the day was made by I. Parker, who was mounted on a Sports Sunbeam.

MACHINES NOT EXCEEDING 250 c.c. (open).
E. Parry (2½ New Hudson), 1m. 7½s.; 2. H. Powell (2½ New Hudson), 1m. 24½s.

MACHINES NOT EXCEEDING 600 c.c. (club members only).—1. Jack Thomas (¾ Norton), 3½s.; 2. Handel Davies (3 A.B.C.), 40½s.

MACHINES NOT EXCEEDING 350 c.c. (open).
Luther Davies (2½ Cotton), 43½s.; 2. W. C. Pikes (2½ Douglas), 44½s.

MACHINES NOT EXCEEDING 600 c.c. (open).
I. Parker (¾ Sunbeam), 36½s.; 2. Jack Thomas (¾ Norton), 37½s.

MACHINES NOT EXCEEDING 350 c.c. (club members).—1. W. C. Parkes (2½ Douglas), 45s.; 2. Luther Davies (2½ Cotton), 46½s.

100 MACHINES, UNLIMITED (open).—1. Jack Thomas (¾ Norton), 36½s.; 2. I. Parker (¾ Sunbeam), 37½s.

DECARS, UNLIMITED (open).—1. Jack Thomas (¾ Norton), 42½s.; 2. F. J. Boshier Jones (¾ B.C.), 44½s.

CLEARS, UNLIMITED.—1. Luther Davies (¾ Morgan), 44½s.; 2. W. H. Waller (10 Morgan), 50½s.

Week-end Club Events.

Aug. 25.—Worcester and District M.C.C. Speed Trials.

Aug. 26.—Northern M.C. Gipsy Run to Bambergh and Wooler.

Aug. 27.—Public Schools M.C.C. Brooklands Meeting.

Aug. 27.—B.M.C.R.C. Fifth Members' Meeting at Brooklands.

Aug. 27.—Barnham M.C.C. Inter-club Team Trial, Open to Any Club in A.C.U. Welsh Centres.

Aug. 27.—Middlesbrough and District M.C. Fuel Consumption Test for Sadler Bowl.

Aug. 27.—Ulster M.C.C. One Day Trial.

Aug. 27.—Luton and South Beds. A.C. Children's Outing.

Aug. 27.—Dewsbury and District M.C.C. Reliability Trial.

Aug. 27.—Scottish A.C.U. Meet at Callander.

Aug. 27.—Wolverhampton Auto. Nomads. Circular Run.

Aug. 27.—West Birmingham M.C.C. Half-day Reliability Trial.

Aug. 27.—Saltcoats and District M.C.C. Club Run to Ayr.

Aug. 27.—York and District M.C. Garroby Hill-climb.

Aug. 27.—Wolverhampton M.C.C. and Kidderminster M.C.C. Joint Hill-climb, Open to Midland Centre, A.C.U.

Aug. 28.—Berkhamsted and District M.C.C. President's Cup Trial.

Aug. 28.—Bury and District M.C. Blake Cup Trial.

Aug. 28.—Doncaster and District M.C.C. Social Run to Fountains Abbey.

Aug. 28.—Stafford and District M.C.C. Picnic at Church Stretton.

Aug. 28.—Leeds and District M.C. Social Run to Plumpton Races.

Aug. 28.—Bridgewater and District M.C. and L.C.C. Club Run to Bourne Mouth.

Aug. 28.—Brighton and Hove M.C.C. Sheraton and Fielding's Reliability Trial.

Aug. 28.—Basingstoke and District M.C. and L.C.C. Club Run.

Aug. 28.—Rochester, Chatham, and District M.C. and L.C.C. Club Run to Margate.

Aug. 28.—Woolwich, Plumstead, and District M.C. Club Run to Windsor.

Aug. 28.—Cambridge and County M.C. Club Run to Epping Forest.

Aug. 28.—Exeter M.C. and J.C.C. Club Run to Widecombe-in-the-Moor.

Aug. 28.—Newcastle and District M.C. Club Rally.

Aug. 28.—West Kent M.C. Picnic at Tay's Hill.

Aug. 28.—Hull and District M.C.C. President's Run to Rivington Pike.

Aug. 28.—Central London M.C.C. Club Run to Wycombe Woods.

Aug. 28.—Berwick and District M.C. Knock-out Hill-climb.

Aug. 28.—Portsmouth and District M.C. and L.C.C. Club Run to Shedfield Common.

Aug. 28.—Walsley and District M.C.C. Reliability Trial.

Aug. 31.—Burton and District M.C.C. Club Run to Ambergate.

North London M.C.C.

On September 17th the club is holding its annual inter-club rally, and this year a handsome shield is to be competed for by all clubs attending the run. It is to be called the North London Inter-club Rally Challenge Shield, and has kindly been presented by Mr. Beaurain, the captain. It is to be competed for under similar conditions as the Richmond (Yorks.) meet, and the club hopes that some of its Northern friends will spend a day in London on that date. Hendon Aerodrome has been selected as the venue. Other prizes include one for the lady travelling the farthest distance to the meet, for the owner of the best kept machine, and for the owner of the machine fitted with the most ingenious device. These latter prizes are open to all motorists and motor cyclists as well as to members of competing clubs. Flights are being arranged at special prices, and teas, etc., will be served on the ground.

Ilkley M.C. and L.C.C.

The club's competition for the Wilkinson and Armitage Trophy was held over a ninety-six mile course on the 14th inst., and proved to be a decided success. The aim of the organisers was to give all competitors, expert and novice alike, an equal chance of success; and, in pursuit of this object, freak hills, watersplashes, etc., were studiously avoided.

Competitors were despatched at two-minute intervals, each man on departure receiving a card giving the situations of the checks and the shortest distances between them. As the checks were invariably situated at very obscure places, and an average of 20 m.p.h. had to be maintained, a certain amount of "Pelmanism" had to be bestowed upon the maps.

The Trophy and gold medal were won by A. R. Naylor (¾ Sports Sunbeam), who made the least time error at the checks, and rode very consistently throughout. The winners of the silver and bronze medals (for second and third places) have not yet been ascertained.

Incidentally, the success of the trial was in no small way due to the activities of Mr. Sellers (the club's hon. secretary), whose uncanny gift for discovering places hitherto unheard of gave the competitors ample food for thought.

Sheffield M.C.C.

H. Oscroft, on an 8 h.p. Enfield sidecar, won the Douglas Vickers Trophy in this club's recent reliability trial, H. Johnson (7-9 Indian sc.) being second, and W. Dronfield (7-9 Harley-Davidson sc.) third.

Times to Light Lamps.

Aug. 25th	8.32 p.m.
" 27th	8.28 "
" 29th	8.24 "
" 31st	8.19 "

Caution.

There have been many (successful) prosecutions for dangerous driving through Littleport, near Ely, during the last month or two.

Inter-club Rally at Hendon.

Particulars of an inter-club rally on the lines of the Richmond meet will be found on the "Club News" page this week. It will take place at Hendon on September 17th.

'Ware Birmingham Tramway Cars.

Tram drivers and conductors have been pressed into service by the Birmingham police to report motorists and motor cyclists who drive on the near side past stationary tramcars that are loading or unloading passengers.

Another Stiff Trial in North Wales.

Regulations have now been prepared and entry forms are available for the Liverpool Motor Club's big annual event—the open trial for the Reliance Cup, which in 1920 proved one of the most sporting, difficult, and successful one-day trials of the year. It will be held on Saturday, September 10th, entries (which should be addressed to Mr. N. C. Sclater, jun., 1, Earlstoun Road, Wallasey, Cheshire) closing on the 3rd prox. Only a rough route has been announced as yet, but it seems likely that Alt-y-Bady ("the worst hill in Wales") and the freak watersplash at Llanfangel (which caused so many protests and failures in the recent North Wales open event) will both be included. There are three challenge trophies on the award list.

Current Chat

Main London-Worthing Road Diverted.

According to the A.A., the main London-Worthing road, where it crosses the railway bridge between Capel and Kingsfold, will be closed from twelve o'clock midnight on Saturday, September 3rd, until twelve noon on the following Monday. The alternative route is via Ockley and Kingsfold village.

Silence.

"They race at a terrific pace, and also make most horrible noises, one of which, we understand, is called 'the cut-out.'" Thus runs an extract from a petition against noisy motor cyclists from Downleaze and Rockleaze residents to the superintendent of the Bristol police. It would be humorous, were it not that the complaint may very possibly be quite justified.

85.69 m.p.h. for 300 Miles.

An American rider, Hepburn, on a 7-9 h.p. Harley-Davidson, won the recent 300 mile race on the two-mile dirt track at Dodge City. His speed over the total distance was 85.69 m.p.h.; for 200 miles, 87.01 m.p.h.; and for 100 miles, 88.39 m.p.h. Application has been made for the recognition of these times as world's records. An Indian was second in the race, while other Harleys occupied third, fourth, fifth, seventh, and eighth positions. Only six Harley-Davidsons were entered.

Special Features.

GUIDE TO THE SIX DAYS TRIALS.
OVERSEAS COMMENTS.
A FOUR-SPEED SINGLE.

Petrol Prices Reduced.

The reduction in the price of petrol foreshadowed by *The Motor Cycle* took place last week. The new prices are: Aviation spirit, 2s. 9½d. per gallon; first quality, 2s. 5½d. per gallon; third quality, 2s. 3½d. per gallon.

First Midland Open Hill-climb.

This year various clubs in the Midland Centre A.C.U. have held very successful hill-climbs open to members of their neighbouring organisations, but so far the Centre has not held an officially "open" speed event. On Saturday, September 17th, this omission will be rectified, when an open hill-climb will be held on Penkridge Bank, between Wolverhampton and Stafford. Full particulars may be obtained from Mr. H. Boydell, 93, John Bright Street, Birmingham.

Sidecars for Hire.

In the House of Commons recently, Commander Bellairs asked the Home Secretary whether, in view of the success which had attended the introduction of sidecars plying for hire in cities such as Paris and in towns in this country, he could state why they were prevented from being introduced into London?

Mr. Shortt replied that, in view of the recommendation of the Departmental Committee on the Taxation and Regulation of Road Vehicles, dated January 6th last, it was not desirable that licences should be granted to sidecar taxicabs to ply for hire in the London area at present; it was too early, he feared, to re-open the question.

FROM SINGLE TO TWIN.

Evidently more than one small-twin enthusiast regards the oil-bath transmission of the Sunbeam as ideal. We illustrate two examples of Sunbeams which have had 3½ h.p. twins substituted for the standard single. (Left) Mr. B. W. Cox's mount, to which he has fitted a 3½ h.p. M.A.G. twin, and (right) Mr. S. M. Greening's, which now has a 500 c.c. twin J.A.P. power unit.

January.

It is with regret that we announce the death of Mr. A. Libbert, the trials secretary of the Manchester Motor Club, as the result of a motor accident on Monday last week.

Belgium or the I.O.M.?

Opinion is divided on the subject of the A.C.U.'s decision to hold next year's T.T. races in Belgium. Some important opinions from manufacturers of T.T. machines and from leading riders appear on another page of this issue, and a further selection will follow next week.

Well-supported Brooklands Meeting Next Saturday.

A very fine entry has been received for next Saturday's B.M.C.R.C.'s race meeting at Brooklands. There will be races for members of the Public Schools M.C. and the North London M.C.C., in addition to the usual programme.

No an on Pillion Riding.

In the House of Commons on Thursday, Captain Tudor-Rees asked the Home Secretary whether he was aware that an alarming and increasing number of accidents was being caused by pillion riding on motor cycles, and that juries were constantly protesting against the practice; whether he had power to prevent it, and, if so, whether he would consider the advisability of stopping the practice, which was dangerous, both to those who engaged in it, and to other road users.

Mr. Neal, Parliamentary Secretary to the Ministry of Transport, in reply, said that he was not aware that accidents attributed to pillion riding were increasing. The matter had been carefully considered by the Departmental Committee on the Regulation of Road Vehicles, who unanimously arrived at the conclusion that, on the information before them, no case had been made out sufficiently strong to justify the prohibition of the practice.

Next Week's Six Days Trials.

This issue of *The Motor Cycle* constitutes a programme to the A.C.U. annual six days' trials, which start from Brooklands on Monday next at 10 a.m.

To Study Overseas Markets.

As already mentioned in our pages, Mr. J. L. Norton, the veteran motor cyclist and designer of the Norton motor cycle, is embarking on a world tour in order to gain first-hand knowledge of conditions overseas; he will also give a series of lectures to motor cycle clubs. Mr. Norton sails early next week.

Running Costs Reduced.

The recent fall in the prices of lubricating oil and petrol has had its effect on the cost of riding a motor cycle, all to the owner's advantage. Sixpence off the gallon of petrol represents one-eighth of a penny per mile off the cost of running a sidecar outfit, which has a consumption of 50 m.p.g.

The "aquatic apple" contest, an event which delighted the spectators hugely at the East Midland Centre's (A.C.U.) Gymkhana, at Stanford Park, near Loughborough. H. Payne (6 A.J.S. sc.) carried the most expert apple biter as his passenger.

IS THE SCOTT SOCIABLE A SIDECAR?

UNFORTUNATELY a difference of opinion has arisen between the producers of the Scott Sociable and the Trials Committee of the A.C.U., at the moment of going to press, but fair to exclude this interesting machine from the forthcoming Six Days Trials. On behalf of the makers, Mr. Scott entered his team of machines as belonging to the class for sidecars of under 600 c.c., a class to which he maintains the Sociable rightly belongs; but the entry was refused by the ruling of the committee, on the grounds that the Scott Sociable should be in the cycle car class. Subsequently, Mr. Scott urged that the machine was essentially a sidecar. It was decided as such; but in such a way that, while maintaining the desirable features of the sidecar in economy, lightness, ease of control, etc., it aimed further at giving

the occupants car comforts in the way of upholstered seats, a screen, hood, and so on. The machine, Mr. Scott pointed out, has no points in common with the ordinary three-wheeled runabout. Its weight is approximately 3 cwt.; it has the same track and wheelbase as an ordinary sidecar outfit; it retains the front wheel castor steering motion, together with the same engine position and one wheel drive. It differs from the ordinary sidecar only in so far as appearance and detachability are concerned. If it were to be debarred on the grounds of detachability, the ruling might be expected to include such heavy sidecar combinations as cannot readily be detached, and are not intended to be. The Sociable, Mr. Scott pointed out, is confined by the leading press to the motor cycle class. It is a development tending towards the improvement of the motor cycle and sidecar,

while the three-wheeled runabout is introduced as an alternative, tending towards the extinction of the sidecar.

In reply, the A.C.U. stated that in view of the present international definition of "combinations," the committee unanimously regretted that the machine could not be accepted in the sidecar class, though they would be pleased to accept the entry as a cycle car.

It has long been urged that the heavy sidecar outfit, intended to be permanently used as such, might at any rate be designed on engineering lines as a one unit construction, giving driver and passenger equal comfort. The Scott Sociable realises this; and since it is the earnest endeavour of one of our leading engineers to solve the knotty problem, many will regret its exclusion from the leading A.C.U. reliability trial of the year.

BIG TWIN VERSUS SMALL SINGLE.

L. P. Openshaw's 8 h.p. Zenith makes Record Fastest Time at Western Centre A.C.U. Open Hill-climb; an A.J.S. Lightweight Second.

AT the Western Centre A.C.U. open hill-climb at Kingsdown Hill, near Bath, on Saturday, a long series of twenty-two classes was run off without hitch or accident, and a crowd of some 2,000 spectators was kept interested right to the last man up—a very creditable piece of work.

The hill is excellent in many ways for the purpose of events of this kind; it is delightfully situated. The gradient is neither too severe nor too easy; the faster riders must have crossed the line at 70 m.p.h. on many occasions, for the fastest time of the day exceeded 60 m.p.h. for the full half-mile.

The high grass banks which line the road for the last 200 yards were thronged with spectators, who evinced a keen interest in the times as they were recorded on the blackboard. So good were these arrangements that all those in sight of the board knew each competitor's time and position within a few seconds after he had passed.

Previous Record Several Times Broken.

There was some trouble at the start through the crowd encroaching on the course, but this was rectified by the appeals of Messrs. Vernon Brook, Featherstone, and "timekeeper" Reynolds.

The open 350 c.c. class first showed that exceptional speeds were to be expected. The record for the hill was given as 32½s., but this was beaten several times during the afternoon.

The riding of G. S. Boston, on his 2½ h.p. A.J.S., was the outstanding feature of the day. His regularity was remarkable. He gained seven firsts and a second, his solo times being: 33½s., 33½s., 31½s., and 32s.; and with sidecar: 40½s., 38½s., and 38½s. At his third climb he beat the record for the hill, but this was eclipsed later by L. P. Openshaw on a Zenith, who simply streaked up the hill in 28½s., thus winning the "John Bull" Challenge Cup.

A general view at the start, incidentally showing the popularity of the Norton machine at such events.

Howard Davies's mount did not seem up to scratch, and he had to be content with five seconds and two thirds; nor did the Douglas riders show up well until the sidecar classes. S. L. Bailey scored two firsts, one second, and three thirds, and the veteran trials rider, W. B. Gibbs, rode well, regularly improving his times at each attempt. A youth, aged sixteen,

F. Buckner, showed excellent promise on a standard 2½ h.p. Douglas in the 22 classes. He missed medals by a second or two on several occasions, and riding met with very favourable comment. Boshier-Jones's Douglas had carburettors fitted, but they did not see him very well. Results:

275 c.c. SOLO (open).—1, A. Kingsmith (Morris-Warne), 54½s.
350 c.c. SOLO (open).—1, G. S. Boston (A.J.S.), 33½s.; 2, H. R. Davies (2½ A.J.S.), 34½s.; 3, E. R. Jacobs (2½ Coulson-B.), 39½s.

H. R. Davies (2½ A.J.S.) getting away well in Event 2. His mount was not at its best, however, and he had to be content with second place.

Big Twin versus Small Single.—

350 c.c. SOLO (experts barred).—1, E. R. Jacobs (2½ Coulson-B.), 38½s.; 2, J. Thomas (2½ Blackburne), 40½s.; 3, S. L. Bailey (2½ Douglas), 41½s. A.J.S. sc.). 33½s.; 2, V. Hassell (3½ Norton), 33½s.; 3, H. R. Davies (2½ A.J.S. sc.), 34½s. 500 c.c. SOLO (experts barred).—1, V. G. Tucker (3½ Norton), 35½s.; 2, J. Thomas (3½ Norton and W. L. CYCLE CARS (open).—1, H. R. Godfrey (8 G.N.), 36½s.; 2, W. L. Davies (8 Morgan), 44s.

* Fastest time of the day; wins the John Bull Cup.

AN EAST MIDLAND GYMKHANA.

Social Event as a Pleasing Change from Sirenuous Trials.

AS a change from the usual form of competitive event, the East Midland Centre A.C.U. held a gymkhana in the grounds of Stamford Hall, near Loughborough, on Saturday last.

Curiously enough, in view of the fact that many riders complain that the ordinary non-competitive club member is not sufficiently catered for on the social side, the attendance was poor.

Bright sunshine graced the afternoon, and, as a garden fête in aid of the local church was being held in the same park, the early arrivals whiled away the time in the various games of skill available.

The motor cycle events commenced about 4.30 in the afternoon, musical chairs being the first item.

This event was won by Miss O. Moore, whose driver was H. Louth (3½ Rudge multi sc.).

Next followed an acceleration test for machines, the riders being timed on a standing start (with stationary engines) to a mark fifty yards away.

A fine performance was made by G. T. Hartwell, who started his Raleigh engine and covered fifty yards in 6s. He was closely followed by a Triumph rider, who was only ½s. slower.

A sidecar acceleration test then followed

A Triumph rider passing the timekeeper in the solo acceleration test, which consisted of a timed fifty yards from a start with stationary engines.

on the same lines, and this was won by A. Cooper (8 A.V. monocar), whose

passenger started the engine by one super-human "heave," and enabled his driver to equal the solo time of 6s.

The best sidecar time was a tie between Triumph Raleigh and A.J.S. machines, which all took 8s.

Following this, a contest known as the "Aquatic apple" took place, in which solo riders had to cover fifty yards, secure an apple with the teeth from a tub of water, and then remount, ride another fifty yards, and deposit the apple in a basket. The winner was G. Marsh (2½ Triumph) in 23s., with Z. Onions (3½ Rudge) second in 36s.

The same test for sidecar machines followed, the passengers having to do the "biting." This was won by H. Payne (6 A.J.S. sc.) in 17½s. One incident which was amusing, although it might have taken a serious turn, was the case of a passenger whose mouth refused to close after dropping the apple. He was being taken away to a doctor in a sidecar, and when passing over a bump leaving the field his mouth suddenly closed again, and everything was in order.

Other results were:

Skillful driving (solo): A. G. Fenn (5-6 Raleigh). Skillful driving (sidecar): W. Bent (5-6 Raleigh sc.). Jump for solo machines: W. Hadfield (4 Triumph). Handkerchief competition (solo): E. Marsh (2½ Triumph). Handkerchief competition (sidecar): G. W. T. Hartwell (5-6 Raleigh sc.).

Musical chairs, a popular competition, and a test of driving skill, brakes, and the ease with which a passenger may alight from a sidecar. Last, but not least, of course the result depends on the agility and stamina of the participants.

NEXT YEAR'S T.T. RACES.

Varied Opinions on A.C.U. Decision to Hold the 1922 Tourist Trophy Races in Belgium.

Apart from Mere Suitability, Sentiment and Policy must be Considered.

THE decision of the Auto-Cycle Union to hold the T.T. races in Belgium next year, using Spa as headquarters, has come as a great surprise, not only to motor cyclists, but to the motor cycle trade generally.

To many prominent riders and manufacturers, a letter circulated by *The Motor Cycle* asking for opinions on the change came as the first intimation that such a resolution had been made; but even where precise details were not known, the larger aspects of the case have caused the immediate formation of definite opinions, some of which are not at all favourable.

As it will be seen, a number of our correspondents regret in the main a change of venue, the economic viewpoint regarding the carrying of such a large amount of money out of the British Isles being touched upon by more than one.

Certain people suggest that with proper influence a road race in this country might still be arranged, but this would necessitate a special Act of Parliament. Whether the necessary machinery could be set in motion here is a moot point, but we fear that in such matters the inertia to be overcome is almost overwhelming.

The following are extracts from the letters which *The Motor Cycle* has already received:

Mr. Geo. Stevens, of A. J. Stevens and Co. (1914), Ltd.:

"Until we got your letter, we were unaware that the A.C.U. had decided to hold the 1922 Tourist Trophy races on a fifty kilometre course near Spa.

"As we at present have no knowledge of the nature of the proposed course, it is difficult to pass an opinion as to whether it will be an improvement on the old I.O.M. course.

"If the proposed course is fairly flat, and with few corners, the race would have little more value, as far as testing machines is concerned, than a race on Brooklands, which does little more than test the endurance of the engine. Owing to its tricky corners, the mountain climb, and its general undulating nature, the I.O.M. course would be very hard to beat in putting a motor cycle through a certain test; not only the engine, but gears, transmission, brakes, and frame, to say nothing of its testing the capabilities of the rider.

"Apart from the possibility of the new course being a pure 'blind,' however, we think the change will encourage

more entries, especially from our Continental friends, and thus make the race more interesting and more international in character.

"We also think that the races in Belgium would attract a greater number of visitors, because it is easy of access by most of the countries on the Continent, that are interested in motor cycles, and, at the same time, is no further away from this country than is the Isle of Man."

Mr. James L. Norton, of Norton Motors, Ltd.:

"I quite think that holding the 1922 Tourist Trophy Race in Belgium will be of advantage to the British export trade, and will attract more 'international' attention than if held in the Isle of Man. I am also of opinion that the race will be of more international character than hitherto, as, without doubt, other Continental makers will compete.

"The assistance and facilities which the Belgian Government offers are in violent contrast to the restrictions and petty annoyances which have had to be tolerated hitherto."

Mr. H. W. Hassall, also of Norton Motors, Ltd.:

"I think the idea of holding the T.T. in Belgium is excellent. I believe more people than ever will seize the opportunity of a holiday in Belgium in order to witness the T.T. races, and, again, it is a wise decision from the trade point of view."

Mr. W. H. Wells, Hendee Manufacturing Co., is also in favour of the Belgian venue; he writes:

"As one who has participated, either as a competitor or entrant, in every T.T. race held in the Isle of Man since 1907, I have had the feeling for a considerable time that motor cyclists were not exactly welcomed in that beautiful island, and were allowed to go there to hold the T.T. race more or less on sufferance. Further, the last two races held there have convinced me that the 500 c.c. machines had no particular advantage over machines with smaller engine capacity, for the reason that there was little opportunity of giving the bigger engine a chance to exert its speed and power. Therefore, when Mr. Loughborough mentioned to me during our recent visit to Belgium, in connection with the Grand Prix race held there recently, that the Belgian authorities were anxious to have the 1922 race held in their country, and after viewing the major portion of the suggested course, I became very enthusiastic over the idea. Not only will the larger machines have an opportunity of showing their full speed on the long straight stretches of beautifully paved roads, but, from what I saw of the Belgian people, I should say that they would welcome motor cyclists from foreign countries with open arms.

"I am sure that the journey from London to Spa can be made with far less inconvenience than from London to the Isle of Man. The G.E.R. steamers have every facility for quick handling of motor cycles and cars on and off the boats. This is certainly a great contrast to the petty annoyances

Next Year's T.T. Races.—

and fleeing one is subjected to when crossing from England to the Isle of Man.

"Another point which is of great importance is that, from a geographical position, the race, held in Belgium, is bound to be more of an international event, which the international T.T. race when held in the Isle of Man has never been."

Mr. C. R. Collier (of Matchless fame) favours the Belgian course:

"I consider the change will be advantageous. First, because it will tend to develop the international character of the race, which was, as the name implies, one of the principal aims of its original promoters. Secondly, I think more publicity in the foreign press will be given to the race if held on the Continent. Thirdly, although I am not familiar with the proposed course, I have no doubt it will not be so difficult as the Isle of Man course, which is, without doubt, undesirably dangerous."

Mr. F. A. Applebee (Senior winner on a Scott in 1912):

"The Isle of Man has always been associated with T.T. races, and from a sentimental point of view many will regret that circumstances have made it necessary to find another venue for 1922; but regrets will be less keen when it is realised that such change will result in better transport facilities, and in freedom from the irritating local conditions imposed in the Isle of Man.

"A suitable course appears to have been chosen, and, as a record entry will undoubtedly be received, much greater interest will be taken in the event, and as a result the benefit to the industry is likely to prove far reaching and of great value."

Mr. C. G. Pullin (who won the 1914 Senior T.T. on a Rudge), thinks that the Belgian course will permit higher speeds:

"The decision to hold the T.T. race in Belgium is excellent, as it is possible to pick a good course that will allow of the high speeds now possible with the present-day motor cycles, and thus give the public the opportunity of studying the results of the sustained high speeds on the road, whereas the I.O.M. course is more of a test of jockeyship and general bandiness of the machine.

"Also, the race is bound to attract considerable Continental enthusiasm and support, but, at the same time, there remains certain sentimentality with those who have achieved success on that treacherous island."

Triumph Cycle Co., Ltd.:

"With reference to the 1922 Tourist Trophy race, we have certainly heard nothing about this, and until we are officially informed, we would prefer not to pass any comments."

The opinion of **Douglas Motors, Ltd.**, is conveyed

Mr. S. L. Bailey, who touches upon the economic aspects of the case:

"We are rather surprised to hear of the decision of the A.C.U. to hold the 1922 Tourist Trophy races in Belgium. Apart from any reasons for changing the course that they might have, we think it is almost a calamity to take so much British money into a foreign country when this country is suffering so acutely from its own financial position.

"We see no reason why the race should be taken from the Isle of Man—in fact, it is far preferable to spend the money here than abroad; but we also think that if the necessary machinery is put in motion and sufficient influence used it could be held in our own country.

"It seems to us that races are being held in France, Belgium, Italy, and America, bringing hundreds of thousands of pounds to the particular country in which they take place; but England, who is badly wanting trade, is endeavouring to assist in sending it to foreign countries.

"Further, there is the question of additional expense to the manufacturer in journeying to the Continent, involving the question of passports, Custom duties, etc., which, unless special arrangements are made, would amount to a considerable addition to the usual cost of this race. If the typical French Grand Prix course is to be selected, the test for the machine will not compare with the gruelling test which the Isle of Man course affords."

Mr. Cyril Williams (winner of the Junior T.T. on a 2¾ h.p. A.J.S. in 1920), tabulates his objections to the change thus:

"(1.) It is a mistake to take the races out of the British Isles.

"(2.) I do not think the I.O.M. course can be improved upon, for what is the ostensible purpose of the races, viz., the development of the touring machine. I contend that, without any increase in to-day's maximum speed, but with improved hill-climbing, acceleration, braking, and stability, it is possible to ride the present course at 60 m.p.h. And I think that the improvements mentioned are what are wanted by the average motor cyclist; he is usually quite satisfied with present-day maximum speed."

Mr. T. C. de la Hay, the well-known Sunbeam rider and winner of the 1920 Senior race, voices a commonly expressed opinion:

"Regarding the decision of the A.C.U. to hold the 1922 Tourist Trophy race in Belgium, I do not favour this for several reasons.

"The race is promoted indirectly by the British motor cycling public, and the interest shown can be judged by the amount of people who yearly travel to the Isle of Man for the purpose of seeing the race. My Continental experience has been that the average Englishman, owing to his inability to speak various languages, is imposed upon, and, added to this, one must not overlook the greater expense and difficulties with regard to Customs, etc., which visiting the Continent involves as compared with the Isle of Man.

"Furthermore, any race on a course such as is used in Continental events is a test of sheer speed, rather than speed combined with absolute reliability under greatly varying road condition, as encountered on the familiar Isle of Man course.

"I should hardly think the A.C.U. would take such an important step without first ascertaining the opinion of manufacturers."

The Scott Motor Cycle Co., Ltd., write as follows:

"Your letter is the first intimation we have had of the change of venue for the 1922 T.T. We do not care to express an opinion until we hear of the reasons for such a change. However, our views on the matter are, that certainly, if at all possible, a T.T., which has generally been considered as Great Britain's motor cycle event of the year, should be held in the British Isles.

"We are of the opinion that the course proposed in Belgium will not give the same actual road conditions as found in the Isle of Man. We, ourselves, look upon this course as the best possible to find all weaknesses in design and a test to destruction, thereby giving manufacturers useful information in their endeavours to manufacture a fool-proof machine. Also, the various bends and mountain climbs do much towards improving the steering qualities and acceleration of the motor cycle.

"We trust that, unless something extraordinary has happened, that the Isle of Man course be selected again for the 1922 T.T. race."

"Astonished," is the expression of **Mr. H. O. Wood**, the Scott exponent and technical adviser to the Scott Motor Cycle Co., Ltd.:

"I am very astonished to hear of the A.C.U. decision to hold the 1922 T.T. race in Belgium on a fifty kilometre course.

"Before I can say anything definite, I should like to know the A.C.U. reasons for this astonishing decision.

"It seems to me that competing machines will not be subjected to any climbing or down hill work. There will be a few corners which will test the brakes and acceleration to a certain extent, but nothing like to the extent of the Island course.

"One would imagine that, instead of going to the expense of running the race in Belgium, it might be just as well to hold it on Brooklands, especially if the competitors are to slow down to a certain speed every few laps.

"I do not think the manufacturers will, as a whole, find the test much different from a Brooklands test, and as for the public flocking to see this race, there will be nothing like the enthusiasm there is and has been in previous years."

Next Year's T.T. Races.—

Mr. Hugh Mason, managing director of Hugh Mason and Co., Ltd., makers of the N.U.T. machines:

"With reference to the 1922 Tourist Trophy races being held in Belgium, I have not the slightest doubt that before the A.C.U. came to such a decision as this it would have just and very good reason for so doing. Its reasons, of course, are unknown to me; but I cannot help thinking that, from the British public interest point of view, it is a mistake. Thousands have witnessed the races in past years in the Isle of Man, many of whom would not consider going to Belgium to witness this event, as apart from the time and expense, I do not think it possible to find anything like such a sporting and suitable course as the 'Four-inch' course in the Isle of Man.

"If a change is necessary, and it could be arranged, I am of the opinion that a sporting course could be found at home or in Ireland."

From a consistent T.T. rider and winner of the Junior Race in both 1914 and 1921, the following statement by Mr. E. Williams is worthy of note:

"The Tourist Trophy races being held in Belgium next year brings up two most important points.

"First, the manufacturers: Should the course be fairly flat and straight, as is usual in Continental races, it will be a matter of sheer speed rather than violent acceleration and efficient braking, which go a long way to success on the Isle of Man course. Personally, I believe they would prefer the gruelling I.O.M. course with its six mile of mountain climb as a better test of a machine than the flat straights of Belgium. Secondly, as possibly something like

£100,000 is taken and spent by the manufacturers, riders, and race-visitors to the Isle of Man over the practising and races, this amount is going out of the British Isles into a foreign country, very little of which is going to return, whereas the majority of it spent in the Isle of Man is brought back to the mainland. The only thing in its favour is that it may act as a stimulant to our Continental trade.

"It seems remarkable that the only road race organised by a British body should be held in a foreign country."

Opinions from the Isle of Man.

The following extracts from the Isle of Man Times are indicative of the keen disappointment felt there in certain circles:

"The loss to the Island is incalculable. Those best able to judge put it at £50,000 hard cash. The figure is probably low. The loss of the advertisement cannot be measured."

"The police took a fiendish delight on 'Sad Sunday' in being objectionable."

"The Island thought that it could do just as it pleased with the motorists, and that, although they squealed, they could never go elsewhere."

"If the Island wants the motor cycle races, let them withdraw these absurd restrictions. Then, but not until, can it reap the great rewards which the races undoubtedly bring."

A Manx supporter of the T.T. writes:

"I trust we can rely, in this Island, on the support of *The Motor Cycle* in trying to induce the A.C.U. not to take the T.T. races from here to Belgium. I can assure you that we, here, feel the loss of these races most intensely."

A NOVEL TWO-STROKE DESIGN.

Air Scavenging System. Mixture Injected after Ports Close.

MUCH ingenuity has been expended in order to improve the normal three-port two-stroke, but very frequently such new designs remain in the paper stage. As a contrast we were recently enabled to examine and test an experimental machine operating on an unusual system.

Briefly, the engine, which is the production of Whitehouse and Sarsons, of King Edward Road, Moseley, Birmingham, employs a double diameter piston.

Doublediameter piston fitted to the W. and S. two-stroke, showing the arrangement of passages adopted on the experimental model.

the scavenging air, the rich mixture in the annular chamber is compressed to such a degree that it is forced past a spring-loaded non-return valve into the cylinder

head, and there fired in a normal manner. In practice the rich mixture is drawn into the annular chamber through a passage formed in the piston, while the air enters the transfer port through a second passage formed in the thrust side

The experimental W. and S. engine.

of the piston wall. A special carburettor is employed, one lever of which controls the flow of air to the crank case, and the other governs the supply of mixture.

The experimental engine was designed with the object of employing as many parts as possible of a standard make of two-stroke engine, and for comparative purposes the exhaust and transfer ports, piston head, combustion space, and bore and stroke were made identical with this engine. Though no actual bench tests have been carried out, the two engines have been road tested, side by side, the gear ratios and conditions being the same in each case, and we are told that the new engine will ascend a certain hill with two up which the standard engine just fails to surmount with only the rider in the saddle. The capacity of the W. and S. engine is 269 c.c., and on the road we found it to be capable of accelerating very rapidly on a slope of 1 in 15 (gear ratio 5.25 to 1), and on the gradient it attained a speed of over 30 m.p.h. by speedometer. It is flexible, and two strokes regularly at low speeds, and appears to develop considerably more power than the average engine of its size.

Showing the general layout of the ports.

AN O.H.V. BIG TWIN.

The 998 c.c. British Anzani V Twin.

OF several engines which made their debut at the recent five hundred miles race at Brooklands, the British Anzani, mounted in a Zenith motor bicycle, gave a very promising performance.

We recently inspected this engine, which had not been interfered with since the event, and we were at once impressed by its condition. Externally, it had kept remarkably clean, whilst internally all the bearing surfaces were as new.

Two cast iron cylinders, which have a bore and stroke of 83×92 mm. (998 c.c.), are provided with detachable heads, which accommodate the overhead valves, the rocker arms for these being pivoted in brackets mounted on twin lugs. The rocker bearings are lubricated by wicks fed from a cup filled with grease, which liquefies when the engine gets hot.

The engine, it is claimed, has developed 24.5 b.h.p. on the bench at a speed of 5,500 r.p.m.

Mechanical Lubrication.

Lubrication is carried out by means of a plunger pump located in the base of the crank case sump. The plunger has a bore and stroke of 6×6 mm., and delivers oil at the rate of just under half a pint per minute at 3,000 r.p.m., engine speed.

The plunger is driven from an eccentric located outside the two cam wheels on the crankshaft. The oil is led first to the timing side, and thence, by a Y-shaped connection, to the flywheel side mainshaft bearings.

The drilled crankshaft is built up from the flywheel side, and feeds the cams via a small hole in the crank case casting, and the magneto bevel spindle

through another channel. The flywheel side of the crankshaft is drilled, and conveys the oil to the white metal big end bearing.

An additional oil lead to the front cylinder is regulated by a sight feed drip lubricator fixed on the tank.

Aluminium pistons carry three rings of the deep and narrow variety, the lowest acting as a scraper and distributing the oil in the cylinder. The little end of the connecting rod floats on a hollow gudgeon pin, which is retained in position by brass discs at each end.

Tappet adjustment is effected in the usual manner, by nuts on the push rods, whilst a long guide is afforded by the use of a brass casting fitted on the top of the crank case.

A quart of oil is contained in the sump, which may be drained by removing a small plug at the base of the pump. The rocker arms, riding over the cams, are provided with Hoffmann rollers—a very effective fitting—whilst the efficiency of the engine relies to a large degree on the special form of cam.

The crank case is held in the frame by four bolts located in shoulders cast at the front and back, while additional support to the engine is also given by two frame tube clips fitted lower down on the casting.

A 1,100 c.c. cycle car engine is also made, and, but for the provision of two belt-driven fans in front of each cylinder, and aluminium cases for

It will be observed that very large combustion heads are used, whilst the crank case anchorage, though somewhat unusual, allows the engine to be removed with ease.

the overhead valve gear, is identical with this unit. To meet the special requirements of cycle car transmission, the heavy flywheel is arranged to receive a clutch cone.

These engines, which are designed by Mr. Hubert Hageus, are made by the British Anzani Engine Co., Ltd., 30, Scrubbs Lane, Willesden, London, N.W.10.

Exhaust valve lifting arrangement and the revolution counter attachment are clearly shown. The dimensions of the oil sump can be gathered from this picture

The wick feed attachment fitted to the valve rockers.

Sectional view of the British Anzani engine.

CLUB NEWS. (Continued from page 239.)

York and District M.C.

Next Saturday the club is holding a hill-climb at Garrowby, near Stamford, commencing at 2.30 p.m.

Truro and District M.C. and L.C.C.

On Friday afternoon, the 2nd prox., an "open" and closed hill-climb will be held on Porthtowan Hill.

Southport and District M.C.C.

Closed speed trials will be held on September 10th on the Southport sands. Entries should be addressed to Mr. H. F. Brockbank, 58, Lord Street.

Skipton and District M.C. and L.C.C.

An inter-club team trial will take place on September 3rd over a course of approximately 100 miles. Application for membership should be made to Mr. T. Wilkinson, Granville St., Skipton.

Leinster M.C.C.

Chiefly remarkable at Saturday's open race meeting, held at Portmarnock, was the fine riding of Greene, on a 2½ Enfield lightweight, who scored in three of four events, winning two. Large crowds witnessed the racing. Results:

250 c.c. CLASS (ten mile handicap).—1, Greene (2½ Enfield), scratch; 2, Watts (2½ Lewis), handicap 4m. 50s. Time, 18m. 30s.

350 c.c. Class (ten mile handicap).—1, Adair (2½ Douglas), handicap 3m. 40s.; 2, Slevin (2½ Velo-cette), 5m. 30s.; 3, Greene (2½ Enfield), 4m. 3s. Time, 18m. 30s.

600 c.c. CLASS (ten mile handicap).—1, Greene (2½ Enfield), handicap 5m. 55s.; 2, (2½ Douglas), 4m. 55s.; 3, Holding (Cotton), 1m. 15s. Time, 15m. 45s.

UNLIMITED CLASS (thirty mile handicap).—1, Cathcart (3½ Norton), handicap 1m. 58s.; 2, Redmond (7-9 Indian), 3m. 3s.; 3, Hampenstall (3½ Rudge), handicap 4m. 30s. Time, 41m. 35s.

Pembrokeshire A. and M.C.C.

On Thursday last this club ran its annual speed trials over a straight course of two and a half miles on the Pendine sands, which were in a very fair condition. Some good racing was seen, the Sunbeams being very speedy; but, of course, Handel Davies's Brough-Superior was easily the fastest machine of the day. In the sidecar class, however, he was very hotly pressed by his brother, Luther Davies, on a Morgan-M.A.G., which was stripped for the event. The outfit which undoubtedly caused the greatest interest was the little 3 h.p. Beardmore-Precision sports model, driven by Archie Cocks. The ear-splitting exhaust of this 350 c.c. engine made everybody sit up and take notice, especially as it flashed over the finishing line at a round 50 m.p.h. This rider was fourth in the 350 c.c. solo race, and was the only two-stroke entered. Three crashes, in which Graham Ace, Mansel Davies, and E. J. Jeremy were the unfortunates, somewhat marred an otherwise enjoyable afternoon's sport. Results:

CLASS 1 (350 c.c.).—1, S. Green (2½ A.J.S.); 2, H. G. K. Palmer (2½ Douglas).

CLASS 2 (350 c.c.).—1, W. Edwards (2½ Omega); 2, Handel Davies (2½ Coulson B).

CLASS 3 (550 c.c.).—1, Mansel Davies (3½ Sunbeam); 2, V. R. McKenzie (4 Triumph).

CLASS 4 (550 c.c.).—1, Mansel Davies (3½ Sunbeam); 2, V. R. McKenzie (4 Triumph).

CLASS 5 (unlimited c.c.).—1, Mansel Davies (3½ Sunbeam); 2, V. R. McKenzie (4 Triumph).

CLASS 6 (unlimited c.c.).—1, Handel Davies (8 Brough Superior); 2, W. Edwards (2½ Omega).

CLASS 8 (sidecars unlimited).—1, H. Davies (8 Brough Superior sc.); 2, L. Davies (10 Morgan-M.A.G.); 3, Archie Cocks (3 Beardmore-Precision sc.).

Taunton and District M.C. and L.C.C.

The above club is holding its trial for the Taunton Motor Traders' Cup on Thursday, September 22nd. The course, which will commence and finish at Taunton, will be about 160 miles.

Colne and District M.C.C.

W. Gawthorpe (on a 4 Triumph) was the winner of the sporting reliability trial held on the 13th inst. R. Haigh (6 Bradbury sc.) and B. Denton (7 A.J.S. sc.) were second and third respectively, with the only lady competitor, Miss Field (5-5 Coventry-Victor sc.) fourth.

Coventry and Warwickshire M.C.

Only eleven competitors, out of an entry of twenty-three, succeeded in getting through non-stop in the very sporting trial organised by Mr. W. Brandish last Saturday. Two fairly deep watersplashes and a track across fields were included in the twenty-eight mile course, which was covered twice.

E. Barnett (3½ Invicta) and F. E. Shanks (2½ Douglas) tied for the solo prize, but a secret check gave the win to the former.

W. J. Montgomery (5 Rover sc.), G. Bettridge (4 Triumph sc.), and H. Finch (4 Triumph sc.) were, in the order given, leaders in the sidecar class.

Midland C. and A.C.

Three laps of a sporting twenty-four miles circuit in the Rednal-Hagley Wood neighbourhood were covered by competitors in the inter-team trial last Saturday. Seven teams of six riders apiece took part, the performances of the best two solo and two sidecar members only of each team to count. Results:

FIRST—BIRMINGHAM M.C.C.

	Marks lost.
R. W. Duke (4 Triumph)	0
A. E. Rollason (3½ Ariel)	15
W. T. Woodcock (6-7 Ariel sc.)	1
T. W. Watson (4 Norton sc.)	0
Total	16

The above riders will receive M.C. and A.C. gold medals.

SECOND—SOUTH BIRMINGHAM M.C.C.

	Marks lost.
H. Cox (3½ Scott)	0
J. Walker (4½ B.S.A.)	0
B. Bird (4½ B.S.A. sc.)	0
H. Uzzle (4½ B.S.A. sc.)	19
Total	24

THIRD—REDDITCH M.C.C.

	Marks lost.
J. Doshier (8 Enfield)	0
L. Sealey (4½ B.S.A.)	0
T. Weayer (5-6 Verus sc.)	25
H. Poole (4½ B.S.A. sc.)	4
Total	29

The following riders lost no marks in addition to those already mentioned: M.C. and A.C.: T. F. Blumfield (6-7 Ariel sc.) and C. Atcherley (4 Triumph). Sutton Coldfield and North Birmingham A.C.: A. Watson (3½ Sunbeam sc.). Kidderminster M.C.C.: F. W. Giles (7 A.J.S. sc.). Wolverhampton M.C.C.: T. C. Greenwood (3½ Sunbeam sc.) and R. Brown (3½ Sunbeam sc.).

A Section devoted to Club Announcements will be found on Supp. xxxix.

Wolverhampton M.C.C. and Kidderminster M.C.C.

A joint hill-climb, organised by the above clubs and open to the Midland Centre A.C.U., will be held on Penkridge Bank, Staffs., next Saturday, commencing at 2 p.m.

Barrow and District M.C.

Only one machine failed on the once dreaded Kirkstone Pass, which was included in the trial for the Fisher Cup. W. A. Singleton (6 Martinsyde sc.) is the winner of the premier award, with H. Jackson (3½ Sunbeam) and J. Morrison (3½ P. and M.) second and third respectively.

Essex M.C.

Open only to members of the club, the annual twenty-four-hour trial from London to Bala and back will be held on Friday and Saturday, September 9th and 10th. Full particulars may be obtained from Messrs. F. A. Applebee and E. A. Colliver, at 208, Great Portland Street, London, W.1.

NEW SIDECAR RECORDS.

Twelve Hour and Five Hundred Miles Records Broken by Norton Sidecar.

ALL sidecar records from fifty miles and one hour up to 500 miles and twelve hours in the 600 c.c. class were captured at Brooklands on the 16th inst. by H. H. Beach, riding a 3½ h.p. Norton outfit.

In addition, the figures for seven, eight, nine, ten, and eleven hours and 400 and 500 miles exceeded the existing 1,000 c.c. sidecar performances for the same distances and times.

The equipment of the machine included Dunlop tyres, Speedwell oil, Shell spirit, K.L.G. plug, C.A.V. magneto, Renold chains, and Binks carburetter; and, as will be seen by the figures below, its speed was very consistent throughout, only gradually dropping towards the end of the twelve hours.

Unfortunately, after the twelve hour times had been clocked, the sidecar axle broke away, and the machine charged down the banking near the members' bridge, striking the rails on the inside of the track, and throwing Beach and his passenger, R. N. Judd, somewhat violently, although neither was seriously damaged.

MOTOR-CYCLING.**LIGHT-WEIGHT VOGUE.****11. BABY SIDE-CARETTES.****BY A MOTOR-CYCLIST.**

Each week more people are looking to the light-weight motor-cycle as their future transport, and there is every excuse for adopting a very optimistic attitude towards this part of the industry.

It is, however, remarkable that, despite the achievements of this type in the biggest events of the last two years, there should still remain a doubt in the minds of a section of the public of their soundness and reliability. I know this exists from my correspondence.

There are now something like 60 light-weight machines on the market. It is more than likely because of this popularity many back-stroke cycle-makers will come into the light-weight trade. My advice to buyers is to stick to the proved "makes." It will pay them.

Nearly all the older makes, particularly those which have been produced, are soundly constructed and is as scientific as any of the "back-stroke" brothers, but there are some eyes on the

for instance, "the little bus with the big heart"—the

O.K. Junior

If any machine has been proved, this has, and the twenty years' experience behind it, and its renown throughout the world, are absolute guarantees of good design and general efficiency. Remember the O.K. Junior is the product of the Pioneers in Lightweight Construction—remember, it climbed Snowdon as early as 1914—remember, that ever since it has been putting up wonderful records in all the classic trials—remember, that its latest achievement was in the Scottish Six Days, when, notwithstanding the fact that the conditions of running were more strenuous than in any previous trial, the two O.K.'s came through with flying colours, being awarded Gold and Silver Medals. Remember—and then "stick to the O.K."

Humphries & Dawes, Ltd., Hall Green, B'ham.

are excellent and reliable. Those dropping the pedal particularly if their work demands stopping and starting. But I do not the "keep to the proved makes." All of them, two-stroke and four-stroke, are very light on petrol, oil, and tyres, and a season's riding, using to go to town for business, to the tennis court or golf course in the evening, and good runs during the day, and not be expensive.

As regards speed, several of the bigger machines are capable of 50 miles an hour, but very, very few are ridden at more than 35. Some of the smallest four-stroke light-weights are so speedy that they would not be left far behind in a long run. Most makers now produce two-speed-gear models, which increase the touring radius of the machines. Even the smallest of them are quite capable of climbing any gradient likely to be met with in an average ride. Most are amply mud-guarded and clean to ride.

The two speeds also give them an extended scope as two-passenger machines, and, with "Tan-Sad" seats on the carrier, have become exceedingly popular as permanent pillion mounts, no matter how

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/—, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **LIFFE & SONS Ltd., and crossed** & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Centry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will lose business by embodying in their advertisements any mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may avail in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

Time allowed for a decision after receipt of the goods: three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 10/-. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Liffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

SEASON TICKET? or SINGLE FARE?

Say you are purchasing a brand new Motor Cycle. You go through the whole alphabet of Agents, and find there is no difference in price, which is very rightly fixed by the manufacturer.

But although there is no difference in price, there is a difference, and a very big difference, in values. Some agents will give you the Single Ticket of Service (which means that, having taken your money, they have no further interest in you), whilst others present you with a Season Ticket of Service, and are always anxious to help and assist.

This is why it pays to deal with Godfrey's, whose ungrudging, willing, and cheerful service adds pounds to the value of any machine sold by them.

These covers are not W.D. or old stock, but direct from the manufacturers.

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

ACTUALLY AT HALF PRICE.

CUSTOMERS' OPINIONS OF OUR RE-CONDITIONED DOUGLAS MOTOR CYCLES

A FEW EXTRACTS FROM THE MANY GOOD OPINIONS RECEIVED.

"With reference to the 4 h.p. renovated Douglas Combination I obtained from you four months ago, I think you will be interested to hear that I have just returned from a tour of some 500 miles, including a return run Birmingham to Liffacombe. The total mileage covered since the machine has been in my possession now exceeds 4,000 miles, and I have yet to spend money to put right any mechanical trouble. I have used the machine daily, and my weekly average is about 250. I have not yet decarbonized the machine, as she still does 60 miles to the gallon."—G.W.S., Birmingham

"The machine was run through Hampshire last week and gave the utmost satisfaction, no adjustments of any kind being required, and still running perfectly. It is a credit to your re-assembling."—G.H.T., Borough, S.E.

Later—"The machine is running better than ever."

"The Douglas (2 1/2 h.p.) I got from you is running A1. It has quite come up to my expectations, so I am quite satisfied with it."—F.A.T., Barnsley.

"I was recommended to you by a man who has at different times purchased three re-built machines from you which are still running as new. As these machines are used for hire work (one of which I am using at present) and ridden by various people, I think there can be little doubt that machines supplied by you are reliable."—W.T., Folkestone.

SANDUM

DUAL PURPOSE

SIDECAR

(PATENT.)

Approved by all the leading manufacturers, and suitable for any make of motor cycle. Finished in colours to suit.

A scientific production of a Single or Double Sidecar at will. By moving the seat back to the forward position and opening the back locker-lid a further spring back and spring seat are disclosed, suitable for a six-foot passenger.

The only family sidecar which is at the same time comfortable, elegant, inexpensive, and carries the weight in correct position, i.e., over the rear axle.

Insist that *both* your passengers shall ride in comfort, and not on make-shift dickey seats. A six-foot man can occupy either seat.

42 Guineas (complete), TO FIT ANY MOTOR CYCLE.
Body only, 21 Guineas.

When ordering your Sidecar specify **SANDUM Patent SCREEN** for comfort, protection against rain, and simplicity of movement.

Ask for our Catalogue, which gives a complete range of **SIDECARS**, and prices, from

£16-16-0 upwards.

SANDHAM ENGINEERING CO., LTD.
336, Gray's Inn Road, LONDON, W.C.

Phone: Museum 1158. T.A.: Kumagelec, Eusroad,
London. [6015]

ROBERTSONS OFFER A BRAND NEW SIDECAR FOR NOTHING

In order to make room for 100 cases of goods (House Electric Lighting Plants) which we must take delivery of very shortly, we have decided to offer 40 Sidecars at the following specially reduced prices. Each Sidecar will be numbered, as shown on the Invoice. The Editor of "THE MOTOR CYCLE" has kindly con-
sented to select, by drawing, one of these numbers. To the purchaser of the Sidecar sold under the number so drawn, we will refund the whole of the amount paid by him. Should the whole of the 40 Sidecars not be sold within a reasonable time, in order not to spin out a settlement unduly, we undertake to refund an amount in equal proportion to the number sold, i.e., if 30 (75%) of the cars only are sold, the winner will receive 75% of his money back; if only 25% are sold, 25% of the purchase price will be returned.

This Week's Big Trial.

THIRTY-SEVEN different makes of machines are represented in this week's annual reliability trials organised by the Auto Cycle Union. Last year the number of manufacturers represented was forty, so it will be seen that the withholding of support on the part of a section of the trade has not affected the value of the trial so materially as was expected. None-the-less, one can only express regret that the one English Six Days event has not received the unanimous support of the motor cycle industry. This year there are ninety-five entrants as against last year's one hundred and thirty-three; but the numbers of machines of any one make in this week's trial are not nearly so large, which is probably due to the fact that private owners have not shown their usual enthusiasm for the trial.

Of the ninety-five entrants eighty-eight started from Brooklands on Monday last, and, while the actual hill-climbing is not so severe as it was last year (with the possible exception of Wednesday's run), there are sufficient really severe hills combined with the exacting regulations to eliminate every motor cycle not in every way capable of fulfilling the requirements of the private owner.

Judged as a whole, the ninety odd machines in the trial impressed us at the start as being extremely workmanlike. What is more, there are fewer special fitments in their specification, in fact, the great majority of the mounts are as sold to the public. We were glad to observe that the entries in the lightweight classes have not fallen off perceptibly, and the inclusion of miniature sidecar outfits is an extremely interesting development, which will be closely watched.

There is no doubt that the new regulations concerning petrol and oil consumption have resulted in a close attention being paid to economy, which no doubt accounts for several of the new carburettors on the competing machines.

A review of the features of the trial's machines, as well as impressions of the early stages of the

trial up to the time of going to press, appear elsewhere in this issue. An account of the trial, from personal observations, together with exclusive photographs, by *The Motor Cycle* staff, will appear in next week's issue.

To Belgium for the T.T.?

FROM the point of view of the A.C.U., there is at present no query as to whether the 1922 T.T. races will be held at Spa; the average motor cyclist, however, and, of still greater importance, that large section of the trade who view the change with disfavour, still regard the matter with an open mind.

How many factors have had their bearing upon the A.C.U.'s decision is not generally known, but at the moment it would appear that, at any rate, there are enough probable trade supporters of the move to Belgium to ensure the success of the event financially, even though it might not be entirely representative of the British manufacturers. From the trade aspect, opinion seems fairly evenly divided, although there is a slight preponderance in favour of abandoning the Isle of Man.

So far, our readers have not had the opportunity of expressing their views on the matter, although we learn that some already look forward to the opportunity of a Continental trip with an object and a motor cycle flavour.

The motor cycle interests in the Isle of Man, of course, are indignant, and may be more so if there is anything in the rumour that a substantial financial inducement was offered by the Belgian authorities to the A.C.U. to transfer the event to Belgian soil. It is realised, however, that the police and official annoyances this year had much to do with the change. Our aid has been invoked on behalf of the Manx motor cyclists, but in such a matter *The Motor Cycle* cannot take sides; our columns are open, however, for exchanging all shades of opinion, and our support must go to advance the greatest good for the greatest number.

The Eternal If?

AS we near the end of yet another summer, the magnitude of the puncture bogey stands out as my main impression. How often this year have I seen tyres destroy a rider's chance of success in race or in reliability trials! How often have I myself been held up by the same old trouble. I can go out to pay a call two miles away or to reach a competition venue 300 miles away, and practically guarantee myself a non-stop ride, *if* only my tyres hold up. Each season I find myself using heavier tyres and experimenting with various anti-puncture gadgets—nailcatchers, road sweeping flaps, patented inner tubes, and the like. Frequently my experiences are moderately encouraging, though never decisive. The motor cycle fraternity seem to have resigned themselves to the inevitable tyre stop. Mr. Rapson, the only man who has dangled a possible immunity before our eyes, seems to have forgotten and deserted us. I suppose we shall start another season in 1922 under the threat of the same old bugbear? Is human ingenuity exhausted in this sphere?

A.A. and A.C.U.

I HAVE just had my renewal notice from the A.C.U., and, like many other readers, have weighed the question of cutting the painter. During the past twelve months I have derived no very obvious benefit from my membership. In fact, my contact with the Union has been limited to press relationships, and to an application under their "get-you-home" scheme, which was promptly turned down. On the other hand, the A.A. are always rendering me little services which may be petty in value—scouts, hotels, etc.—but are at any rate a direct, personal return for the subscription.

However, when I had digested the matter, I decided to rejoin, concluding that the A.C.U. had rendered me bigger services than its rival, albeit its work is of a less ostentatious character. The difference between the two is the difference between rates and

taxes. In return for my rates I get road repairs round my house, a water supply, and other obvious benefits. In return for my taxes I get the protection of the British Army and Navy, etc.; etc. The A.A. represent the rates. The A.C.U. represents the taxes. The Union—like the navy—never approaches my door step, but it looks after the breed of motor cycles very admirably.

We ought all to support both policies; the both is that the two separate organisations demand two separate—and quite considerable—subscriptions each year.

Brake Durability.

I RIDE a lot of machines in each year, so it does not often happen that I cover more than 3,000 miles on the same bus. Yet, during 1921, I have worn out the shoes of two belt rim brakes. One of them bottomed in the pulley after just over 1,000 miles, and the other after 1,800 miles. A reader who studies our report of the Swiss Six D will see that the week was more than enough to destroy the brake efficiency of several machines entered. This is simply ridiculous. A machine can be said to be well braked when its front brake is merely a legal fiction, and its rear brake can outlast one week's hard work. There are lots of cars—and a few motor cycles—on the road which can show good braking after a full year of work. The two commonest faults visible in belt rim brakes are: (1) soft shoes, and (2) shallow rim grooves, which a shoe bottoms after quite brief usage. A third—and less common fault—is that it is sometimes difficult to keep the shoe in accurate alignment with the pulley through the vicissitudes of adjusting the brake, the footrests, and the rear wheel. The main brake on my Cedros wore out rapidly for this reason, and I notice that the latest pattern has a floating shoe of so simple a character that it does not increase manufacturing costs. On one of my 1920 machines the shoe was never in perfect alignment if the front wheel and rear chain were adjusted truthfully. T

Occasional Comments.—

shoe's angle of entry depended on two rigidly mounted pins; nobody but a manufacturer of scientific instruments could have guaranteed permanent and simultaneous alignment; and it would have cost him thousands to do so, for a variation of 1° in the lie of the frame tubes would upset matters. I used three shoes in three months on that machine.

My Coat.

YESTERDAY found me ruefully eyeing a rather expensive coat, purchased at the commencement of the year. It is still waterproof. There is not a solitary tear in it anywhere. It may be a trifle cracked in parts, and does not sit the contours of my body as smartly as once it did, but it is quite serviceable. Yet I cannot wear it. A kind of microscopic grime is daubed over its whole surface, and the cleaner's quotation for rendering it presentable is about half the cost of a new garment. Moreover, I know from experience that the cleaner will use petrol to get the dirt off, and that when his fell work is finished, the coat will be about as waterproof as tissue paper. There are people who profess to reproof these oil coats, but I never yet found a coat was really better proof after it had been re-treated. Does anybody know a coat material which does not magnetise the grime in the vicinity, which does not rip after the manner of oilskins, and which yet is impenetrable to wet?

Bicycle or "Push-bike"?

A MEMBER of the Anfield B.C. expostulates with me in the most friendly way for occasional allusions to "push-bikes." He states that many members of the great cycling clubs, such as the Bath Road, the North Road, and the Anfield, are no motor cyclists, and that the cyclist-cum-motor cyclist greatly resents the term "push-bike." In due respect his letter smites my conscience. I try to squeeze a smile wherever I see one lurking, and I must confess that I have occasionally underlined certain comic aspects of cycling, just as my risible

faculties are frequently tickled by motor cycle happenings. But surely he is just a *little* fussy in objecting to the term "push-bike"? Even if it were intended to be slighting (which it is not), many good motor cyclists and true refer affectionately to their "buses as "stink-wheels," just as they call their fairies "face-ache," or by some other mock-opprobrious term. Any serious effort to depreciate what must always be the manliest form of two-wheeler deserves the severest censure; and I for one would never sneer at a brother of the road because his taste differed from mine, or his pocket was shallower, or his calves were better developed. I, too, am a cyclist, and I ask "Anfielder" and anybody who feels like him to accept my word that *The Motor Cycle* holds cycling as a sister pursuit in equal honour with stink-wheeling. But the harmless, necessary word "push-bike" has crept into the British language; we cannot do without it.

Cyclists and Motor Cyclists.

66 **A**NFIELDER" is evidently anxious to promote better relations between cyclists and motor cyclists, which are certainly necessary. It cannot be pretended that motorists have improved the cyclist's lot. Noise and dust and pot-holes are all the concomitants of motoring, and are anathema to cyclists. Speed, whether reckless or discreet, is apt to alarm the more nervous pedallers. But, according to "Anfielder," the real trouble is that the tag-rag and bobtail of both camps are mistaken for the genuine article of each camp. He is sure that if the typical cyclist and the typical motorist could "get together" rather more than they do, a better mutual understanding would be created, and would often lead to combined action, e.g., in such matters as dust-mulching of the roads, of which I wrote on August 11th. I suggest that motoring clubs should invite local cycling organisations to their annual dinners, and to any winter lectures, whist drives, dances, sing-songs, etc., on their programme. Years ago, when I innocently accepted a job as club secretary, I found my local cyclist friends invaluable helpers in running off our competitions.

ON THE ROUTE OF THE SIX DAYS TRIALS.

Yesterday (Wednesday), competitors, after climbing Lynton and Porlock, had to cross the wild expanse of Exmoor.

TWO ON TOUR

A 1,000 Miles
Trip on a
Dunelt Sidecar.

* * *

At Gretna Green, just
over the border.

WHEN holiday time comes round one is apt to find a shortage of accommodation in one's pet corner of the British Isles, and the question of where to go becomes a very real problem.

A motor cycle and sidecar, however, presents a simple and satisfactory solution, for it enables its owner and passenger to tour far afield and see the beauties of the country at a very moderate cost.

Towards the end of the recent drought a member of *The Motor Cycle* staff decided to set out with his wife and luggage in a northerly direction, with no more definite objective than the West Coast of Scotland. Having previously taken delivery of a 500 c.c. two-stroke Dunelt and sidecar, which was just nicely "run in," preparations were largely confined to the question of the stowage of a fortnight's kit. Since no definite port of call had been arranged, the outfit had to be entirely self-contained, and no extras could be sent on to wait till called for.

Luggage Accommodation.

No luggage carrier is fitted to the sidecar chassis, and the spare wheel occupies the space usually allocated to this fitting, but the sidecar is unusually roomy and the bulbous back is capable of containing a con-

Showing the amount of luggage accommodation on the Dunelt Watsonian sidecar.

siderable amount of luggage in addition to a two-gallon can of petrol; as a matter of interest, a loading diagram is appended. The rear compartment contained two gallons of benzole, one quart of oil, petrol funnel, tools, spare tube, spare electric bulbs, bag of odds and ends (belt fasteners, etc.), kit bag of boots, extra waterproof, overall leggings, and a parcel of clothes to fill up an odd space and prevent rattle. In front of the sidecar seat was placed a Gladstone bag packed loosely at the front end and covered with a rug. This formed a kind of leg rest and was declared to add to the passenger's comfort rather than detract from it. Under the seat lay a spare belt, in one sidecar pocket a spare driving chain, repair outfit, and small odds and ends, and in the other pocket a small Kodak, a telescope, and maps, etc. A bag on the motor cycle carrier contained necessities for a overnight stay, and, in addition, a cushion cover packed with soft clothes was utilised as a back rest for the passenger. Thus, with a little ingenuity, necessities and even a few luxuries for a fortnight's trip were stowed without discomfort to the passenger. It should be added that a light steel fishing rod was attached to the sidecar chassis and some trout tackle bestowed in the "boot." The driver's comfort was attended to by a Brooks B600 cantilever suspen-

A two-gallon petrol can, a quart of oil, and all tools and spares, may be carried in the capacious "boot," still leaving room for a considerable amount of luggage.

The heavily ribbed head is a characteristic feature of the Dunelt.

sion saddle, wide mudguards, and the Dunelt combined footrest and footplates.

For one who is accustomed to ride long distances to schedule time, it is a pleasant change to set out with no fixed plans, and no definite daily mileage to be covered—indeed, a maximum of 150 miles per day was agreed upon, so as to ensure a complete rest and plenty of time to see the country.

The first day's trip was a short one, from Kenilworth to Wrexham, where we took the opportunity of looking round the Powell works, and examining

the production methods of the Powell motor cycle. It must not be imagined that the firm are newcomers to internal combustion engine work, and we were able to inspect an interesting development in small stationary engines, which may be started from cold on paraffin without previous heating of carburetter or fuel supply. Thence *via* Chester and the Birkenhead Ferry to Liverpool, and up the West Coast route to Kendal, and, after a stop for tea, over Shap Fell to Penrith. Incidentally, the authorities of the City of Lancaster deserve special praise for the admirable system of signposting which they have erected. There is probably no town in the United Kingdom which is more easily traversed.

Up to this time the roads had been good on the whole, and excellent in places, but the approach to Shap is very rough, and the surface of the hill is loose. A top gear of 4 to 1 was obviously too high

to enable the heavily loaded outfit to make a high gear ascent, but the climb was made on "middle" with power in hand, in spite of the fact that a following breeze gave little opportunity for reasonable cooling. On the subsequent descent came our first incident, for the rear tyre burst without warning. How we blessed the Dunelt knock-out spindle and interchangeable wheels, for, in a few minutes, the spare wheel was in position, and we were once more upon our way. The burst, however, was a nasty one, and it was deemed advisable to procure a new cover at Penrith, and this was duly fitted to the spare wheel at leisure. The following day's run to Glasgow, *via* Carlisle, Crawford, and Lesmahagow, included several very long but well-graded climbs, such as the steady rise to Beattock summit (over 1,000ft., taken on top gear all the way), and the wonderful pulling powers of the big two-stroke showed to advantage. Even after miles of climbing with the heavy load and liberal throttle opening, there were no signs of tiring or drying up, and on reaching Glasgow, after fourteen miles of tramlines and cobbles, the engine was as fresh as the day it left the works.

Combined footrest and footboard offers alternative riding positions. Note the special flywheel withdrawing nut.

From Glasgow onwards, our trip became a mazy wandering round Loch Lomond, Loch Fyne, and Loch Awe. We were primarily in search of a small "out-of-the-way" hotel with fishing attached, and we eventually found our ideal in the Loch Gair Hotel on the

(1) The Dunelt at the summit of Glen Croe after ascending the famous Rest and be Thankful.

(2) Loch Gair Hotel, beautifully situated on the west of Loch Fynne.

(3) The bridge over the Tweed at the quaint town of Berwick.

(4) Where the river Leny leaves Loch Lubnaig—the Leny Falls, near Callander.

Two on Tour.—

north side of Loch Fyne. The country here is perfect, there is excellent loch and sea fishing, the hotel is all that could be desired, and terms very moderate. Four blissful days were spent at this delightful spot, and it was only when time was getting short that we left to continue our wanderings.

A Good Climb.

Before reaching Loch Gair, we had ascended Glen Croe and Rest and be Thankful. On a hill shortly after leaving Arrochar we suffered belt slip, and a hasty shortening led to a broken fastener. This was the only road stop due to the machine throughout the trip, with the exception of the burst tyre already mentioned. Immediately afterwards, we made an excellent ascent of the Rest and be Thankful, using low gear for the first time on our journey, but having plenty in hand all the way up. At the summit we stopped to enjoy the view and to watch two modern cars essay the long climb with its rough surface and 1 in 7 gradient. The first was compelled to shed its passengers, and the second, a powerful six-cylinder Landulet, made an excellent ascent, but arrived at the top boiling steadily. The "Rest" is not a "freak" hill, but it is considerably more severe than anything encountered in an ordinary tour, and it is no mean performance for a very heavily loaded 500 c.c. machine and sidecar to make an easy climb with such high gear ratios. During the descent to Loch Fyne, we were lucky enough to get an excellent close-up view of three golden eagles, two of which were accommodating enough to sit on rocks within eighty yards of the roadside, and our telescope, which had been brought for just such an occasion, proved most useful.

After leaving Loch Gair, we travelled in a south-westerly direction to Loch Gilphead, then, following the Oban Road to Ford, turned up the easterly side of Loch Awe and spent a glorious morning along the shores of the loch to Dalmally. Then followed a long climb to Tyndrum, thence onwards towards Killin, but, just short of this place, we turned right through Glen Ogle to Callander and Bridge of Allan. In order to avoid the Falkirk and Linlithgow Road from Stirling to Edinburgh, we tried the north side of the Forth via Alloa, Dunfermline, and Queensferry. The roads on this section are reasonable, but not good, and we were charged eight shillings and twopence to cross on the ferry in contrast to elevenpence for the same load by the Birkenhead-Liverpool ferry.

Southward from Edinburgh, the main road was followed through Berwick, Newcastle, and Darlington, then down Leeming Lane to Broughbridge and the North Road, through Newark and Grantham till just

beyond Welwyn, where we cut across country to spend a night near Harpenden. The following day we completed the round tour of 997 miles by a run up the London Road to Coventry.

A No-trouble Trip.

In all this time the Dunelt ran like a clock. On two road stops were due to a tyre and a belt fastener and the only adjustments consisted of tightening the driving chain. No attempt was made to put up high average speeds, but there was never the slightest difficulty in maintaining a legal average. Fuel consumption worked out at approximately 40 m.p.g. and considering the very heavy loading and the nature of the roads, this is a reasonable figure especially for a big two-stroke. Benzole or a mixture of benzole and petrol not only improved the performance of the machine, but also increased the mileage obtainable per gallon. Unfortunately we were unable to obtain benzole once throughout our trip.

though twice we passed garage advertising this fuel shortly after the tank had been filled. Nearly three quarts of oil were used, but this very liberal allowance largely accounted for by the hill country traverse and a 150 mile run against a strong head wind. Normally this figure could be reduced.

The engine ran perfectly throughout the trip, and

the only misfire (on the last day) was caused by starvation due to a choked air vent in the filler cap. There was ample power for all touring needs, although the Dunelt is not a fast machine, it can hold its own on the level with most touring mounts of its capacity, and will maintain a wonderfully steady average. The passenger, who has had considerable experience in that capacity, states that the sidecar is most comfortable and the springing excellent, and the easy riding provided for the driver by the Brooks cantilever suspension saddle has to be experienced to be believed. Only once were the working parts oiled. The Maglita combined ignition and lighting system functioned perfectly, and the K.L.G. plug supplied with the machine has never been replaced.

The worst roads encountered in order of villainy were Morpeth-Newcastle (atrocious), Crianlarich-Killin (very bad in places), and Lochgilphead-Kilmartin (bad). Parts of the Great North Road near Wetherby bad, Glasgow-Alexandria bad, and a few poor roads round parts of Loch Fyne.

At the conclusion of a delightful holiday we attempted to advise all those who possess good sidecar machines to start off "into the blue." In this way or is never behind time; there is nearly always comfortable accommodation to be obtained in the small towns, and one can stop just where fancy dictates.

The Dunelt in touring trim. Note the Brooks leaf spring B600 saddle and the Maglita ignition and lighting set. This photo was taken at the conclusion of the 1,000 miles trip.

PILLION RIDING IN THE DESERT.

Retrieving a Derelict Car—Motor Cycle Carries Help and Spares over Forgotten Tracks.—

The A.B.C. beside the Ford car which it rescued from the Egyptian Desert.

EIGHTY miles of desert separated me from my old Ford car, which lay blistering to death in the tropical sun at Suez. Meanwhile I impatiently waited at Heliopolis (Cairo) until sufficient funds could be raised to pay the exorbitant freightage which the railway company would charge to bring it over their 10 mile semi-circular route.

The dilemma, however, was circumvented by an adventurous pal who owned a 1920 A.B.C.; moreover, I had heard rumours of an old institution known as the Cairo-Suez Railroad—long disused. This road formerly ran in a straight line across the desert, and, before the Suez Canal was opened, was one of the most important and best kept highways in the world. Since then, however, thousands of sandstorms have raged over it, and for long distances little evidence remains of its former existence but the ruins of the watch towers at intervals of about six miles.

It was enough! We supplied ourselves with revolvers, verbottles, and bully beef, and strapped Ford differential cases and a radius rod on the A.B.C. We spent the night before our pilgrimage in prayer, fasting, and fixing a new rear cover on the 'bus. At 4.30 a.m. we prepared to set off to meet the rising sun. We took ground strips with us as a precaution against getting lost, and, if nothing was heard of us, a Vickers Vimy was to search for our ground strip signals in the desert.

Good Track Changes to Sand and Boulders.

For forty miles the remains of the road were extraordinarily good, and we sped along, two up, at an average speed of 20 m.p.h. Then the road became like the bed of a river, and our torture commenced. Over this surface the strain on the driver's wrists was so bad that we had to alternate between driving and riding on the flapper bracket every few miles. The way was surfaced with a dreadful variation of closely-packed boulders and soft sand, whose consistency for riding purposes was that of sticky clay.

The last ten miles were across the desert, and we stepped on the mirage of the Suez Oil Refineries, which,

in the shimmering haze engendered by the scorching sun, appeared miraculously suspended in the air hundreds of feet above the sandy horizon.

At last, as we approached our destination, the surface improved somewhat, and we finished in good style, our trip taking five and a half hours.

Spring Frame Appreciated.

There can be nothing but praise for the performance of the little A.B.C. under the most appalling conditions. The spring frame carried the driver easily, immune from the shocks that sent the passenger, without exaggeration, two feet off his cushion. The engine ran splendidly and did not overheat in spite of much low gear work and a temperature which would have been 110° in the shade (if there had been any). We arrived with our exposed knees looking like over-ripe tomatoes and faces a colour which was not justified until we had been at least two minutes at a liquor supply.

Twenty-four hours sufficed to get the Ford functioning, and the return journey was performed without mishap to the A.B.C., which proved by far the most comfortable vehicle when ridden solo. W.A.B.B.

ALCOHOL FROM TROPICAL JUNGLES.

PROFESSOR WHITFORD, of the Yale School of Forestry, recently made the statement that alcohol could be economically manufactured from the moist vegetation of tropical forests and jungles. "The evidence is conclusive," said Professor Whitford, "that the tropical sun has the power to store up more energy in the form of cellulose in a given time than has the temperate sun. If this is in a utilisable form, it remains for the ingenuity of man to overcome the difficulties of profitably applying it. With the increasing needs of the nation it is reasonable to expect that sooner or later it will be necessary to utilise more fully the plant resources of the tropics." Professor Whitford said that the annual production of alcohol from the nipa plant in the Philippines was now nearly 3,000,000 gallons, and that one distillery there had produced 93% alcohol at a cost of about 20 cents a gallon, and, if operated to full capacity, could make it at a cost of 15 cents a gallon.—*Scientific American*.

FURTHER VIEWS ON THE NEXT T.T.

More Opinions on the Belgian Venue from Prominent Firms and Riders, supplementary to those published last week.

IN our last issue extracts from fifteen letters were published on the subject of the wisdom of the A.C.U. in transferring the T.T. races next year from the Isle of Man to Belgium.

These letters were forwarded to us from past winners and from the makers of winning machines in a series of races which have been held in the Isle of Man from 1907 to 1921. As was evident from their contents, the opinions of the writers were widely diversified; many imagined that the course would not provide the same test of both machine and rider as does the Isle of Man circuit, and, while certain firms regard the change to Belgium as valuable from an international and business-propaganda point of view, others feel strongly that in the present financial state of the country, the step is an unwise one, having regard to the amount of money to be taken out of this country.

So far as the man in the street is concerned, the majority, perhaps, will be little influenced, because only a comparatively small proportion of motor cyclists make the journey to the Isle of Man; it would appear reasonable to suppose that a still smaller number will travel to Belgium. Despite the war, the average Britisher does not "go abroad" very freely, although the journey to Harwich is more convenient than that to Liverpool (but by no means so for those resident in the more northerly counties). It must not be overlooked that the motor cyclist who is present in the mere capacity of spectator can walk from the Douglas landing stage to the grandstand or other point of the races, whereas, on arrival in Belgium, an eighty-mile journey through a non-English speaking country confronts the visitor; moreover, Customs formalities, passports, etc., will be needed, whereas the Isle of Man visitor, if unhampered by a motor cycle, undergoes no formalities at all.

It would appear, therefore, that from the ordinary motor cyclists' point of view, the holding of the races in Belgium or elsewhere is a matter of comparatively small moment (if it *could* be held in England, *what* a gate there would be!), and, in view of the mixed reception by the trade, it seems that the final test of the decision will be in the number of entries received.

Rudge-Whitworth, Ltd., advise us that:

"They do not regard the holding of the T.T. in Belgium with favour, primarily because of the fact that the associations connected with the event are essentially British, and secondarily because it is unlikely that a course selected in Belgium will compare with the I.O.M. course as an all-round searching test calculated to bring out the most desirable features of motor cycles."

Mr. Harry Bashall, prominent in pre-war T.T. races, and now associated with the Martinsyde machines, writes:

"I think in many ways the decision of the A.C.U. to hold the 1922 T.T. races in Belgium will benefit the trade of this country, as the T.T. will have a real international interest."

"I take it that we shall see the cream of the Continental trade competing with us. Previously it has been far too expensive for the Continental manufacturer to send a team to compete in the I.O.M. Taking things generally, I look

forward to seeing a very hard fought race of a real international kind. I and my brother hope to be competing. It will do the trade a lot of good if we secure a British success."

Unfortunately, the opinion given under the name of **Mr. C. R. Collier**, in our last issue, was that communicated by his brother, **Mr. H. A. Collier**. As there is some divergence in the ideas of these well-known brother **Matchless** riders, we here present Mr. C. R. Collier's views on the subject:

"The nett effect will be to increase the speed, with possibly a slight reduction in personal risk, but as an all round test for design of engine, gear box, frame, etc., the Isle of Man course is infinitely superior. The A.C.U. is to be commended upon its desire to eliminate danger, but it remains to be seen whether the straighter course will have this effect. My opinion is that, with the increased speed which is inevitable, the risk will remain approximately the same; and, taking all things into account, I do not consider the decision a wise one."

Mr. H. Rem. Fowler, who won the twin-cylinder class of the first T.T. race in 1907, favours the choice of Belgium:

"There are points both for and against the change. As a race for speed only, the limit has just about been reached on the Isle of Man course, but for showing up reliability, acceleration, braking, etc., we shall have to go a long way to find a better one, and, after all, that is what the race is run for. I have never seen the Belgian course, but I expect much higher speeds will be reached."

"Then there is the question of advertisement. A race on this course ought to give much more valuable results than when held in the Isle of Man, owing to it being more international in character and easier of access, thereby bringing a far greater number of spectators."

A further letter from **Mr. W. H. Wells** (of Indian interests) will clear certain popular misconception regarding the selected course in Belgium:

"After reading the opinions in last week's issue of *The Motor Cycle*, in regard to holding the 1922 races in Belgium I notice that several of your correspondents have got the impression that the proposed new course consists of straight, similar to the Le Mans course in France."

"The Belgian course is quite as hilly as the one in the Isle of Man, and at one particular point rises considerably higher in altitude than the mountain (Snaefell) road. From personal inspection of the proposed new course, I should say unhesitatingly that the machine without a three-speed gear would stand a poor chance of winning, and there are just as many opportunities for testing out the efficiency of brakes, as well as the skill of riders, as there are on the Island course."

"It is quite true that holding the races in Belgium would mean taking money out of Great Britain, but I am sure that manufacturers must realise that the holding of the T.T. races in a foreign country would boom business abroad and create an interest in British products, which eventually would bring in far more money to this country than has ever gone to the Isle of Man."

"It must not be overlooked that the Island authorities absolutely ignored the A.C.U. when they gave the month of June, 1922, to the R.A.C. for the car races, showing how little they cared about motor cyclists when they have an opportunity to cater for cars. This means that the race, if held in the Isle of Man, would either have to take place in May, which is really too early in the season, or in September, when the mornings are too short for practice. Furthermore, remembering what happened to the roads after the last "Four Inch" car race, I doubt if the Isle of Man people would be able to get the roads back in anything like a suitable condition for motor cycle racing by September."

Further Views on the Next T.T.—

Speaking for New Imperial Cycles, Ltd. (makers of the 1921 250 c.c. class winner of *The Motor Cycle Cup*), Mr. Norman T. Downs favours the A.C.U. decision:

"I fully approve of this move on the part of the A.C.U. "It will be good from the point of view of publicity, as there is no doubt that riders of motor cycles and the public will be attracted from most countries in Europe. It will also make the T.T. more of an international contest, as no doubt the Continental makes of motor cycles will compete, which cannot but be regarded as desirable.

"In favourably considering this suggestion, I am influenced by the fact that the course, while having long stretches of straight road, at the same time includes those features which are so necessary, by way of hills and corners, such as will fully test machines in all parts, as was done on the Isle of Man course.

"The Belgian authorities have, I believe, promised very adequate military assistance, so that it should help the A.C.U. to organise the race in a very perfect manner, and

this, I feel sure, will be expected of them. There were a number of unfortunate features in this year's T.T. race, which left something to be desired, but I have no doubt that the A.C.U. will rectify these in next year's race."

Butterfields, Ltd., makers of the Levis machines, which have performed so well in the T.T. races and to one of which *The Motor Cycle Cup* for the 250 c.c. class winner was awarded in 1920, think that the change will be beneficial; they write:

"All things considered, we are of the opinion that the change is likely to be a good one. We cannot help but feel sorry that our own antiquated laws render the holding of the T.T. on the English mainland impossible, and while it is consequently a pity that it is necessary to go abroad in order to find a suitable course, this can hardly be helped. We think it quite likely that the various authorities concerned might quite easily make things pleasanter for the manufacturers and their riders, and for visitors, and as regards transport machines no doubt a very great improvement can be made."

WILL THE T.T. IN BELGIUM BE POPULAR?

Twenty-one communications from manufacturers and riders of previous T.T. winning machines have already been published in "The Motor Cycle." TEN of the writers AGREE with the holding of the 1922 races in Belgium, NINE look upon the change with DISFAVOUR, ONE adopts a NEUTRAL attitude, the remaining ONE withholds an opinion.

Those whom the change will affect most nearly have given us their views, and all are valuable, whatever the attitude; NOW WHAT DO PRIVATE OWNERS THINK? Readers who make a point of visiting the Isle of Man for the T.T. are invited to express their opinion of the change.

RECORDS BROKEN AT BROOKLANDS.

Douglas and Triumph Machines make Successful Attempts on Short and Intermediate Distance Figures.

A SERIES of records was broken on Brooklands track on August 24th by two well-known machines and riders. The first of these, a 3½ h.p. o.h.v. Triumph, ridden by Major F. B. Halford, was triumphant in the C and D classes (500 c.c. and 750 c.c.). The flying five miles was accomplished in 3m. 51.7s., a speed of 77.69 m.p.h. (125.03 km.p.h.). The time occupied for the ten miles record, standing start, was 7m. 53.6s., 76.01 m.p.h. (122.33 km.p.h.). It is interesting to note that Halford's fastest lap was accomplished at 79.03 m.p.h.—a remarkably fine performance—which indicates that this machine is attaining the form which it originally promised.

Nearly 73 in the Hour.

On the same morning J. L. Emerson, riding a 3½ h.p. Douglas, also broke a series of records, covering the fifty miles in 40m. 30.8s., a speed of 73.99 m.p.h. (119.07 km.p.h.). The hundred miles were covered in 1h. 23m. 7.8s. at a speed of 72.18 m.p.h. (116.15 km.p.h.). In one hour he travelled 72 miles 1,533 yards, which is equivalent to a speed of 72.87 m.p.h. (117.27 km.p.h.).

The day was dull, but there was practically no wind, and the weather conditions were ideal. Emerson would have made a much better performance in the hour had he not had to stop for petrol before completing the last two laps. His equipment consisted of K.L.G. plugs, Castrol oil, Pratt's spirit, Flexi carburetter, E.I.C. magneto, Hutchinson tyres, and Renold chains; while Halford's o.h.v. Triumph used similar lubricating oil, Dunlop tyres, M-L magneto, K.L.G. plug, and Renold chains.

F. B. Halford, who, on a 3½ h.p. o.h.v. Triumph, broke the five miles (flying start) at the ten miles (standing start) records at Brooklands last week for 500 c.c. and 7 c.c. machines.

J. L. Emerson, who broke the fifty, the hundred miles, and the one hour records for 500 c.c. machines on a 3½ h.p. Douglas at Brooklands last week. Emerson has for some years been a prolific record-breaker, and has not always confined his attention to flat twins.

A Useful Magneto Knife.

A HANDY knife for motor cyclists' use has been introduced by Messrs. T. E. Rowbotham and Son, Globe Works, Penistone Road, Sheffield. From the sketch it will be seen that the knife includes two grades of files, a spanner for the contact points, another to remove the

Rowbotham's magneto knife in the "all open" position.

central screw holding the contact breaker, a spark gap gauge, and, in addition to the ordinary knife blade, a prong. Being small and compact, it is very suitable for carrying in the waistcoat pocket. The price is 3s. 9d., plus postage.

An Electrical Lighter for Gas Lamp.

TO enable acetylene lamps to be lit without dismantling and without the use of matches is the purpose of the device we illustrate; whether such an attainment is very greatly to be

Part section drawing of the Moss-White "Redilite," and (inset) an exterior view of the terminal portion.

desired is a matter for individual choice. In this case anyhow the "inevitable added complication" is almost negligible.

As may be gathered from the drawing a turn of the switch sends the high tension current along an easier path, across the lamp burner, than across the plug points in a cylinder on the compression stroke. The device, which clips on to any standard plug, also serves as a useful waterproof terminal. 10s. 6d. for the solo model (illustrated), it is sold by Messrs. Moss and White, 23, Newbold Terrace, Leamington Spa.

Good detail work and a fine finish (all black) characterise the Cowey handle-bar mirror.

(The Cowey Engineering Co., Ltd., Kew Gardens, Surrey.)

Sectional view of the new 26 x 3in. Dunlop Magnum tyre, which may be fitted as standard next year by several manufacturers.

For the convenience of the pillion passenger, a detachable arm rest, which, fitted in the socket shown, provides something handy "to hold on to." (S. G. Baker, 2, Avondale Road, Sparkhill, Birmingham.)

Showing the very attractive lines of the new F.R.S. "stream-line" horn. There are no visible twists. (F.R.S. Lamps, Beam Works, Vere Street, Birmingham.)

Quickly Detachable Electrode.

THE central electrode (and insulation) of the Slipper plug is a taper fit in the main body, so that explosion pressure in the cylinder maintains a gas-tight joint, while a sharp tap dismantles the plug for cleaning purposes. The terminal is waterproof. The makers are Commercial Units, Ltd., 24, Gray's Inn Road, London, W.C.1.

Component parts of the Slipper plug.

From Foot to Hand Clutch Control.

UNTIL this year B.S.A. motor bicycles have been fitted with foot clutch control, and owners of the older models often desire to effect a conversion to the handle-bar lever method. This may now be done with comparative ease by means of the Vertiflex conversion set, sold complete with cable and lever by Haggard and Co. 120a, Salop Street, Wolverhampton. It is a very well-finished article, and may be fitted by the

Vertiflex hand clutch control for 1920 and earlier B.S.A. motor cycles.

average amateur in less than half an hour, for all that needs to be done is to remove the adjusting screw from the centre of the operating quick-thread nut, and to replace with the Vertiflex fitting. The foot control is retained, and may be worked independently.

Among the Accessories.—

A simple form of folding foot-rest produced for the benefit of pillion riders by C. W. F.

Price, 35s, Garden Lane, Chester.

The latest accessory for Tan-Sad seats and saddles is a new back rest, which may be fitted to either. It costs 9s. Stirrups for pillion riders cost 5s.

An emergency Bowden wire nipple—the Parsons—which should appeal very much to those who like "to be prepared." It is an efficient and neat little article. (Commercial Units, Ltd., 24, Gray's Inn Road, London, W.C.1.)

A new and well-sprung carrier seat, which is manufactured by A. H. Swinford, 19, Queen's Road, Battersea, London, S.W.11.

Instantly adjustable, and with an ingenious locking action, the Gripio wrench possesses at least two attributes that should be found in the perfect spanner. It may also be used as a pipe wrench. (The Patent Gripio French and Spanner Co., Ltd., Batavia Works, 12, Hackins Hey, Liverpool.)

A long exhaust pipe, which, it is claimed, by reason of air-inlet louvres really does act as a silencer. It is built up in sections, as shown. (Matthew Harvey and Co., Ltd., Glebeland Works, Walsall.)

A simple silencer, complete with baffle device, which should meet the needs of many "long exhaust" enthusiasts. Such a fitting for any size of pipe is sold by the E. W. L. Accessories Co., of 102, Lancaster Road, East Ham, London, E.1, at 10s. 6d.

A pillion seat introduced by the Tynesider Works, 9 and 10, Union Street, North Shields. It costs 45/-. When folding backrest, armrests, foot-rest, and leg guards are supplied, the cost is £3 10s.

A simple and well-made belt fastener, made by the Challenge Manufacturing Co., Ltd., 49, Summer Row, Birmingham.

The Endell pillion seat, built on simple lines, and marketed by A. J. Dew and Co., 19a, Endell Street, Long Acre, London, W.C.2.

A grip consisting simply of a suitably shaped, closely "woven" coil spring. It is easily fixed by the special clip shown. (The British Spring Co., Wentworth Works, Wentworth Street, Peterborough.)

A convenient clip with a "quick action" finger screw has now been embodied in the Clayrite handle-bar mirror. (Clayton-Wright, Ltd., Great Hampton Street, Birmingham.)

How the R.S. rivet extractor removes two rivets at one operation is at once clear from the sketch. The inventor is G. R. Salt 18, Cherry Street, Coventry.

The E.W.L. Accessories Co., of 102, Lancaster Road, East Ham, London, E.6, makes all kinds of silencing fittings, its latest product being the auxiliary fish-tail exhaust shown. The outlet is six inches across.

A tube recently introduced by Hutchinson Tyres, Ltd., 70, Basinghall Street, London, E.C.2. As will be seen by the section shown, it has been thickened considerably at the out, or "road," side.

ON THE COMMON NEAR WIMBLEDON.

ROAD TESTS of NEW MODELS

THE 2½ h.p. HAWKER TWO-STROKE LIGHTWEIGHT.

ENGINE: 70 × 76 mm. = 292 c.c.
two-stroke.

LUBRICATION: Automatic pressure feed from sump.

MAGNETO: Flywheel type.

SPECIFICATION.

CARBURETTER: Claudel-Hobson automatic.

FRAME: Rigid.

WEIGHT: 160 lb.

GEARS: 2-speed chain gearing.

TRANSMISSION: Chain-cum-belt.

WHEELS: 26 × 2½ in.

PRICE: £60.

IN taking the Hawker two-stroke machine through a test run of approximately 100 miles, its performance was judged with due regard to the fact that the machine was designed and produced by the H. G. Hawker Engineering Co., Ltd., of Kingston-on-Thames, as a comparatively inexpensive and extremely simple lightweight motor cycle.

Mechanical simplicity, reasonable hill-climbing powers, comfortable riding, and ease of maintenance at the outset, were considered to be features of primary importance, and although such *desiderata* are invariably sought by most makers of small machines, it is, at the same time, not often that their accomplishment is attained at the first attempt. For instance, it sometimes happens that mechanical simplicity is gradually lost in a promising design by various alterations as the machine is passed through the proving process, and with it, very often, ease of maintenance as a corollary.

Original Design.

In the case of the Hawker lightweight, the design is original in many respects, and the ease of maintenance has been brought down to an extremely simple item for the inexperienced person. For example, the

lubrication system of the engine has no working parts, is entirely automatic in action, and one filling of oil lasts 500 miles. Then again, the speed gear consists of two primary chains running over sprockets of different sizes which are engaged by dog clutches located within a miniature "gear" box, while decarbonisation is reduced to the simplest of jobs—due to the detachable head—an important point in two-stroke engines.

Section of the crank case and sump of the Hawker two-stroke engine. Pressure is maintained in the sump by crank case compression acting through a non-return valve in the base chamber. The crankshaft main bearings, of exceptional size, are lubricated by the oil en route from the sump to the big end.

Good Service.

Our run was taken through ordinary country roads at average speeds from 15 to 30 m.p.h., and the first noticeable point in the machine's behaviour was the good steering qualities and really comfortable saddle. It is possible to ride "hands off" without side sway, and pot-holes do not affect steering. We found that the engine had enough power for the average hill on top gear, and at 25-30 m.p.h. the unit runs smoothly, and with a nice reserve of power. No signs at any time of overheating were revealed during our run; and for hills of some severity, such as are often found away from the main road, the lower gear provides all the climbing powers required, as has been proved in recent trials.

Road Tests of New Models.

Our test of the Hawker also included some city traffic work to and from the office, and the machine proved to be nippy and manageable in town traffic, the twin rear brakes proving efficient in use, on dry roads at any rate. It is in traffic work that a light solo mount scores, for the test specimens are so handy and easy to manipulate.

The Hawker is an essentially no-trouble lightweight. The flywheel magneto is of very robust construction, and in the event of the engine being taken down, the timing of the magneto cannot be carried out wrongly on reassembly. The chains of the speed gear are on the opposite side of the engine to the flywheel, and, on removal of the cast aluminium chain case, are very accessible and easily adjusted. As mentioned before,

the lubrication system is entirely automatic—it feeds oil under pressure to the big end of the connecting rod, and there is no drip feed to watch when riding; while in regard to the machine, apart from the engine and transmission, the only points in the frame that require lubricating are the main spindle of the front forks and the wheel hubs.

Generally speaking, we were very pleased with the behaviour of the Hawker, and at £60 it represents really good value for the person who has limited means and requires a simple and easily-looked-after mount. During the 100 odd miles of our run, the oil consumption was one-third of a pint, which is equivalent to 2,400 m.p.g., and petrol consumption about 95 m.p.g.; the first figure is excellent and the second well up to the average.

Near-side view of the Hawker lightweight. The magneto and flywheel are in one unit, but the contact breaker is very easily accessible through a small inspection cover in the flywheel casing. Note the twin belt rim brakes at the rear, operated by independent toe and heel pedals on the footrest. The saddle is of very simple design, but is exceedingly comfortable.

THE MOTOR CYCLE IN AUTUMN.

The Charms of Nature and Wild Life in the Fall of the Year.

TO many people autumn is the most pleasant time of the year. Admittedly spring is very attractive, for then comes the awakening of nature after the hardships of winter, but there is not that mellowness and beauty of foliage in evidence as there is during the later months of the year.

Those who live in the country will appreciate the glorious mornings of the season. The dawn comes in haze, while, as the light strengthens, we see the tinge of blue through the layers of morning upper mists; then, later in the day, the sun lighting up the wondrously woven tapestries of the surrounding woods and the warm brown glory of the chestnut trees.

The Best Season.

With hard roads, a tinge of cold in the air, and a sweetly running mount, autumn is certainly the ideal season for joyous health-giving spins. Gone is the heat and dust and heavy traffic of summer.

Happy are the days when we pack our rods, tackle, and lunch, on the trusty mount, and, with jovial

companion, make our way to the reed-fringed mere, there to try a bout with the big pike that are hidden beneath its waters. Not until the sun is disappearing over the wood, colouring the sky like a sheet of red flame, do we pack up and join the open road once more, which to-night has an enchanted appearance in the wonderful twilight.

The Homeward Ride.

As the evening becomes chilly and the mist rises in the little hollows, our thoughts turn to home, a fire, warm food, and an atmosphere of comfort.

Surely there are few things better than this, unless it be a day in the rougher land of the county, with a gun instead of the rod. After hard tramping for many miles and a try at all sorts of game, one is glad to return to the saddle and make speed into the gathering darkness.

To the sportsman, the motor cyclist, and the lover of nature, autumn is indeed a glorious season.

T.L.W.

North-western Centre A.C.U.

Next Saturday the Centre is holding a rally and gymkhana at Blackpool, the committee of the Blackpool and Fylde M.C.C. being responsible for the local arrangements. Centre speed trials will take place on Southport Sands on the 17th inst.

Dunheved (Launceston) and District M.C.

In the last hill-climb arranged by this club, Claude Truscott ($\frac{3}{4}$ Scott) was first in the solo class, and Maurice Prent (10 Morgan) was the winner in the class for passenger machines; his Morgan carried two passengers.

The club is arranging an open amateur hill-climb for next Wednesday, which will take place on a hill at Lifton, about four miles from Launceston, and a large entry is expected.

Brecon M.C.

Several well-known Welsh riders attended the recent hill-climb on Warren Hill. Results:

350 c.c.—Closed: A. Williams (Diamond-Jap), 1m. 32 $\frac{1}{2}$ s. Open: 1, Luther Davies (Cotton-Blackburne), 1m. 26 $\frac{1}{2}$ s.; 2, R. D. Jones (Diamond-Jap), 1m. 29s.; 3, A. Williams (Diamond-Jap), 1m. 34 $\frac{1}{2}$ s.

600 c.c.—Closed: 1, A. O. Lewis (B.S.A.), 1m. 27s.; 2, D. P. Jones (Triumph), 1m. 31 $\frac{1}{2}$ s.; 3, D. J. Jones (Triumph), 1m. 31 $\frac{1}{2}$ s. Open: 1, Dr. Lindsay (Norton) and Jack Thomas (Norton), tied, 1m. 58s.; 2, W. B. Evans (Sunbeam), 1m. 6 $\frac{1}{2}$ s.; 3, J. Parker (Sunbeam), 1m. 7 $\frac{1}{2}$ s.

UNLIMITED.—Open: 1, Dr. Lindsay (Norton), 1m. 4s.; 2, W. B. Evans (Sunbeam), 1m. 4 $\frac{1}{2}$ s.; 3, Jack Thomas (Norton), 1m. 5s.

East Midland Centre A.C.U.

The Centre has arranged a hill-climb, open to Centre residents only, to take place near Chesterfield on September 10th. In this event will be incorporated the event for the Centre Cup, which was postponed from Clipstone Drive Speed Trials.

Glasgow Western M.C.C.

The open reliability trial on August 20th for the James Challenge Shield was stiffened by the inclusion of Balloch-andrain, one of the Scottish Six Days observed hills. The course was from Glasgow to Dunoon and back to Inverbeg. It proved a fairly severe event, few riders being able to keep up schedule time, and many failing on the observed hills; out of thirty-one starters twenty completed the course. The winner of the James Challenge Shield, D. Wright (secretary of Selkirk M.C.C.), rode most consistently on his 4-h.p. Indian Scout, and made excellent ascents on all hills. Results:

JAMES SHIELD.—D. Wright (4 Indian Scout). PRIZES PRESENTED BY MANUFACTURERS' UNION.—Solo, D. Wright (4 Indian Scout); sidecar, J. Littlewood (7 A.J.S. sc.).

SPECIAL PRIZES CONFINED TO CLUB MEMBERS.—Solo, R. Watson (4 $\frac{1}{2}$ Humber); sidecar, J. Littlewood (7 A.J.S. sc.); private owner, T. McCreadie (3 $\frac{1}{2}$ Sunbeam).

GOLD MEDALS.—D. Wright (4 Indian Scout), R. Watson (4 $\frac{1}{2}$ Humber), J. W. Morton (3 $\frac{1}{2}$ Rover), and B. Gold (4 Blackburne).

SILVER MEDALS.—J. Littlewood (7 A.J.S. sc.), J. Burton (3 $\frac{1}{2}$ Norton), T. McCreadie (3 $\frac{1}{2}$ Sun-

beam), J. M. Fadyen (8 Sunbeam sc.), J. Lloyd (3 $\frac{1}{2}$ Norton), R. M. Wilson (2 $\frac{3}{4}$ Hobart), W. S. Brown (3 $\frac{1}{2}$ Ariel), and G. C. Proctor (6-7 Ariel). BRONZE MEDALS.—E. P. Elliott (3 $\frac{1}{2}$ Ariel), G. Elliott (3 $\frac{1}{2}$ Beardmore), G. Grinton (7-9 Harley-Davidson sc.), A. A. Hunter (2 $\frac{3}{4}$ Douglas), and W. A. McInnes (8 Matchless sc.).

Doncaster and District M.C.C.

Very well-supported speed trials were held recently on the Sandall Beat Road, where on October 1st the club will hold its open speed trials. Full results follow:

250 c.c. SOLO.—Private Owners: 1, T. Hilary (2 $\frac{1}{4}$ Triumph); 2, P. A. Illingworth (2 $\frac{1}{4}$ Velocette). General: 1, H. C. Dadds (2 $\frac{1}{4}$ Radco); 2, P. A. Illingworth (2 $\frac{1}{4}$ Velocette).

300 c.c. SOLO.—General: 1, E. Sayles (2 $\frac{1}{4}$ New Imperial), 35 $\frac{1}{2}$ s.; 2, A. B. Dadds (2 $\frac{1}{4}$ Leris), 41 $\frac{1}{2}$ s.; 3, H. C. Dadds (2 $\frac{1}{4}$ Radco), 45 $\frac{1}{2}$ s.

350 c.c. SOLO.—Private Owners: 1, H. Thomas (2 $\frac{1}{4}$ Douglas), 35 $\frac{1}{2}$ s.; 2, H. Wilson (2 $\frac{1}{4}$ Douglas), 37 $\frac{1}{2}$ s. General: 1, R. Gray (2 $\frac{1}{4}$ New Scale), 34s.; 2, H. Thomas (2 $\frac{1}{4}$ Douglas), 35s.

500 c.c. SOLO.—Private Owners: 1, J. J. Lister (3 $\frac{1}{2}$ Norton), 27s.; 2, C. E. Keyser (3 $\frac{1}{2}$ Sunbeam), 27 $\frac{1}{2}$ s. General: 1, J. J. Lister (3 $\frac{1}{2}$ Norton), 27 $\frac{1}{2}$ s.; 2, J. H. Wilkinson (3 $\frac{1}{2}$ Norton), 28s.; 3, C. E. Keyser (3 $\frac{1}{2}$ Sunbeam), 30s.

750 c.c. SOLO.—Private Owners: 1, J. J. Lister (3 $\frac{1}{2}$ Norton), 27 $\frac{1}{2}$ s.; 2, C. E. Keyser (3 $\frac{1}{2}$ Sunbeam), 28 $\frac{1}{2}$ s.; 3, F. B. Leach (3 $\frac{1}{2}$ Scott Squirrel), 30s. General: 1, J. H. Wilkinson (4 Norton), 28 $\frac{1}{2}$ s.; 2, J. E. Claybourne (4 Triumph), 28s.; 3, C. E. Keyser (3 $\frac{1}{2}$ Sunbeam), 29s.

UNLIMITED SOLO.—General: 1, J. E. Claybourne (4 Triumph), 28s.; 2, J. H. Wilkinson (4 Norton), 28 $\frac{1}{2}$ s.; 3, C. E. Keyser (3 $\frac{1}{2}$ Sunbeam), 30s.

750 c.c. SIDECARS.—1, J. J. Lister (3 $\frac{1}{2}$ Norton sc.), 34s.; 2, J. H. Wilkinson (4 Norton sc.), 35 $\frac{1}{2}$ s.; 3, H. Hopkinson (4 Triumph sc.), 38 $\frac{1}{2}$ s.

UNLIMITED SIDECARS.—1, J. J. Lister (3 $\frac{1}{2}$ Norton sc.); 2, J. H. Wilkinson (4 Norton sc.); 3, E. Sayles (4 Triumph sc.).

FASTEST TIME OF RAY.—J. J. Lister (3 $\frac{1}{2}$ Norton), 27s. (distance half-mile).

A competitor in the sporting reliability trial held by the Clitheroe and District M.C.C. last week. H. Bracewell's 5-6 Coventry Victor is evidently running well.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

POWER UNIT FOR AN INVALID MOTOR CHAIR.

Sir,—Can any reader recommend a suitable water-cooled engine to fit on an invalid chair for an ex-Service man who has lost both legs but has the use of both arms?

He is approximately 14 st., and requires at least a 3½ h.p. engine, as the district is very hilly. The power unit should be hand-controlled, have a hand starter, and be capable of slow running without excessive heat.

WORKSHOP.

Crymmych.

INTERNATIONAL RECOGNITION OF THE LIGHT-WEIGHT SIDECAR.

Sir,—On page 194 of *The Motor Cycle*, in reporting F.I.C.M. Congress at Geneva, you state that the proposal in the name of Mr. Ebbelwhite, to the effect that 350 c.c. sidcar machines should be reintroduced, met with *violent opposition*, and was not adopted. I wonder why? Is it that these gentlemen fear so much for the safety of the riders of this light and efficient vehicle, or is it the mere fact that they fear general efficiency, being probably interested in something much bigger and more expensive?

After all the lightweight sidcar has done in this country, the manner in which it has proved its efficiency as a commercial vehicle for the delivery of goods, quite apart from the pleasure given to hundreds of owners in Britain, makes me wonder why those gentlemen so *violently* were in opposition to this proposal.

Perhaps M. Neher, who was in the chair, would like to offer me, through the courtesy of your columns, an explanation as to this violent opposition.

E. H. HUMPHRIES.

HUMPHRIES AND DAWES, LTD.

WHICH IS THE MOST SILENT MACHINE?

Sir,—I should like to express satisfaction at the silence and sweet running of my new combination—a 1921 Enfield, with Vickers engine. To me it appears to be one of the quietest machines on the road—in fact, a thoroughly common-sense outfit at a reasonable price.

Petrol consumption with the Amac two-lever, 26 jet, averages nearly 70 m.p.g.

P. H. ROGERS.

Sir,—“Fed Up,” in your issue of August 11th, seems greatly annoyed at having been summoned for riding an excessively noisy standard machine. Silence or the reverse, as far as the exhaust is concerned, is a matter of taste, but it is my belief that a motor cyclist who is summoned for riding a noisy machine has only himself to blame.

Practically any make of machine, with certain notable exceptions, can be excessively noisy if the rider races his engine, and if this is done in a town the “bobby” is likely to prick up his ears.

Last summer, in a cycle car of my own construction, I ran from Torquay to Ipswich via London (Westminster, Trafalgar Square, Tottenham Court Road, etc.), with only 6in. x 1½in. stub pipes from the cylinders of my 90° o.h.v. J.A.P. This is not my usual arrangement, the exhaust pipe was deleted by a crash following a burst tyre.

Throughout all this journey no trouble was experienced with the police, as I made a point of using great care in gear changing and starting in towns in order to keep the “revs.” down.

VINCENT O. GRECH.

Sir,—I now pick up my pen and all that rot to reply to “Mr. Owl,” who specialises in silence.

Yes, no doubt we all know the difference between a Rolls-Royce and a motor cycle.

I really do not admire his choice in giving £30 more and sacrificing 15 m.p.h. to obtain the silence of a Rolls.

The average machine, say, will do 50 m.p.h. (this is a fair average, I think). Well, 15 from that; 35 is not much good.

He seems to forget that a machine going at 65, less silencer, more often runs just as sweetly as at 10 m.p.h. There is not any need for anything to be noisy except the exhaust. Really, I could let him have a book on this, could write on it for hours, but it is hardly fair to the Editor.

I should write to Dr. Low, B.Sc., F.I.C., D.Sc., etc., etc., and ask him “Why does not a motor cycle run as quietly as a Rolls-Royce car?” I am not sure as to these degrees of Dr. Low’s.

By the way our mount is a 4 h.p. Triumph with a 2in. diameter exhaust pipe (one piece), and the “cough” is a dream. I should like to sign myself “Cockatoo,” but it is so undignified.

THE METALLIC BROS.

Doncaster.

Sir,—I was really interested in “The Owl’s” letter in the current issue of *The Motor Cycle* regarding the silence of a Rolls-Royce moving swiftly along the road. Is it not a fact that much of the power of these fine cars has to be sacrificed to obtain that silence so much sought after by “The Owl”? I mean, of course, by muffling the exhaust gases to such an extent in their path to the atmosphere that piston speed is very much interfered with, which, of course, would not be the case with a clear exhaust pipe. I wonder if “The Owl” would like to sacrifice 25% or 30% of his 3½ h.p. to silence his exhaust alone.

Now, turning to the screech of the valve gear, I believe it would very much add to the price of any machine if tappet rattle were eliminated, though I believe much of the mechanical noises one hears when riding a motor cycle is due to the chattering of the whole machine for the want of efficient springing.

Anyhow, I have what I consider is the most silent single-cylinder machine—perfectly quiet unless some steep hill is encountered—but at what cost? For instance, valve stems

enclosed and automatically oiled by cool oil vapour (in fact, everything enclosed), with an exhaust of special design. W.E.C. Swansea.

A double pillion seat constructed by Mr. J. Fudge, of Chippenham. When an additional passenger is seated in the sidecar the rear tyre would appear to be well loaded.

PILLION RIDING THAT IS NOT DANGEROUS.

Sir,—It has probably been brought to your notice that a certain London morning paper has been launching a protest against pillion riding, but, as is common with most of these agitators, the true facts are not made clear—that is, the difference between pillion riding with a solo mount, and pillion riding with a sidecar outfit. Knowing this paper's reputation for "both sides of the question," I give us back our freedom," and such like ideals, I wrote and asked them to publish my letter explaining the difference, in the interests of family sidecar drivers. But they have not done so. May I ask the favour of you publishing this, as probably many letters of protest were received by them and not published.

The matter of pillion riding was even taken to Parliament; but was very rightly thrown out without debate, and thereby we are "given back our freedom."

FRANK C. ARMITAGE.

INDESTRUCTIBLE INSTEP STRAPS FOR LEGGINGS.

Sir,—In reply to "Ixion's" comments of August 4th *re* overall trousers instep straps, I agree with him that leather straps for this purpose are utterly ridiculous. Mr. W. H. Townsend and myself having come to this conclusion, some time ago we invented a device that entirely does away with these straps.

We have had one in use some time, which we find is a great improvement, in every way proving more satisfactory than the strap now fitted.

We have now applied for provisional protection, as we realise the fault is general, and not individual, as at first expected.

This invention consists of a spring steel strip shaped to fit over the instep, and made to clip underneath the instep, as shown, to ensure a complete grip with no fear of slipping over the boot. A locking device of the simplest pattern is employed—a strip of steel hinged at one end with a pointed piece at the other end, which fits into a slot. To fasten or unfasten, the spring has simply to be opened out. This device enables the gaiter to fit tightly in place round the boot.

Steel instep straps for leggings designed by Mr. D. W. Williams. (See accompanying letter.)

D. W. WILLIAMS.

BRITISH BIG TWINS—FROM VARIOUS VIEWPOINTS.

Sir,—I should like to say a few words on behalf of the British big twin. True, it has not excelled on the track of late, but for roadworthy every day service I think we can hold our own with any foreign-built twin. What about the Matchless, Sunbeam, Brough Superior, Excelsior, etc.?

Personally, I am a variable gear enthusiast, and have recently taken delivery of a 7.9 h.p. Rudge Multitwin, and find it, with T.T. bars, absolutely ideal for both solo and sporting sidecar work.

For combined lightness (only about 30 lb. more than a $3\frac{1}{2}$ h.p.), control, sweet slow running, terrific acceleration, and speed, I have never ridden anything to equal it.

It takes a streamline sidecar and passenger practically everywhere on top ($3\frac{1}{2}$ to 1), and I have nothing to fear from any three-speed all-chain 'bns in the matter of speed, either solo or sidecar. This machine sells for £120; a similar variable geared machine—the Zenith—I believe, costs more, but even then both are well below the price of any foreign big twin.

I have no interest in Rudge-Whitworths except a more than satisfied user since 1913. As for their twin, I can only paraphrase Omar and say: "I wonder what the makers buy, one half so precious as the goods they sell."

H. G. HARRISON.

Sir,—As an interested reader of the correspondence *re* "British Big Twins," I think Mr. Karslake's letter only begs the question. Long distance trials, with all their attendant faking and fixing up, are not to be compared for a moment to a test like the 500 mile race at Brooklands,

where every machine was on its mettle, going ding dong, lap after lap.

I thought it a great pity myself that the Brough Superior was not entered, because it would then have been directly up against the American big twins, out for speed, and if it can do the 80 m.p.h. claimed for it, would have stood a good chance against machines of similar size.

Judging by the performance of the British big twins in the 500 mile race, we have a lot to learn yet, when 8 h.p. machines are beaten by 4 h.p. singles (Norton and Triumph) and a 5 h.p. flat twin (Coventry Victor). Our manufacturers must tackle the invasion of the American big twins seriously, and show equal performances if we are to obtain British supremacy in this field.

Road distance, like road speeds, are talked about far too loosely. A race at Brooklands is the thing to find out the best, and is the only proper place for speed.

Coventry.

BIG TWIN.

Sir,—In your issue of July 28th, your correspondent, writing about a "super-British twin," has been misinformed regarding the engine of the Brough Superior when he writes about giving it a season in which "to shake its feathers." I believe the type of engine is a 1913 model, and has been driven at Brooklands by E. B. Ware and E. Remington, both J.A.P. riders at that time. By this, I think the engine has had ample time to show up the "Yankees," as your correspondent terms them. Personally, I do not think the Brough Superior would stand up to a 500 miles duel alongside Indian or Harley-Davidson machines. However, I think your correspondent will agree that it is opportune for our big twin manufacturers to recover the laurels and arrange a contest of 500 miles between British and American twin-cylinder machines of 1,000 c.c.

London, N.17.

OBSERVANT.

Sir,—It has always surprised me that in the correspondence which takes place under the heading of British *v.* American machines no one ever instances a point which, in my humble opinion, goes a long way to make or mar a machine, viz., the clutch and shock-absorbing qualities of the transmission. I think in this respect British machines can put it all over the "Yanks," as one seldom finds an American twin that will run with the clutch in (not slipping) on top gear *without chain snatch* at any speed under about 15 m.p.h., whereas the majority of English bicycles and single-cylinders at that will run on top gear at anything above 8 m.p.h. and accelerate from that speed with a drive as sweet as a belt! Although on the American 'bus the clutch is designed to allow the rider to slip it, it is very frequently a case of either "in or out," which undoubtedly must have a lot to do with the short life of chains as compared to the mileages one gets from chains on English bicycles. It seems somewhat surprising that American manufacturers do not take a leaf from the British manufacturers' book in this respect, as in many respects they are ahead, though not so far as they used to be. Such items as big tyres, mechanical lubrication, automatic carburetter, all chain drive, spring frames, etc., are comparatively recent additions to English bicycles, whereas American manufacturers included them in their specifications years ago.

Why is it that the majority of English machines having an ideal transmission spoil the picture by not having a decent gear change? Watch, or listen to, an American and an English machine getting away from a standing start. The rider of the former looks and is at ease. The latter looks as though he is trying to do the three card trick (unless he changes with the aid of the exhaust lifter), and it could all be avoided by fitting a foot-controlled clutch.

As regards twist grips *v.* levers for controls, I reckon honours are about even. The actual controlling movement is infinitely better with twist grips, and they leave the bars clear of gadgets; but, for racing, I think one has a better control over the steering on a bicycle with levers, as once they are put they stay put; and one can get a decent grip of the bars and leave the controls alone, instead of having to hang on by the end of the twist grip, and one can only remedy this by experiencing it on a pretty rough road. Still, one can get used to anything, and "one man's meat," etc.

As I have already encroached overmuch on your valuable space I will not transgress further, except to wish you continued success with your excellent journal, of which I have been a constant reader for nine years.

Melbourne, Australia.

SAPPER.

SKILFUL DRIVING BY UNKNOWN RIDER.

Sir,—May I take the unusual course of thanking, through your columns, the motor cyclist who averted a nasty smash on the high road over the Snake from Glossop to Sheffield on a recent Monday.

I was teaching my wife to drive my James outfit, and, stopping on a hill, we commenced to slide backwards across the road just on a nasty bend. A few seconds later a motor cyclist flashed round the bend at a high speed and a terrible smash seemed inevitable. The rider, however, instantly swerved, charged up the steep grass bank at the side of the road, and was away like a flash without looking round. I tremble to think of the result if he had hesitated a fraction of a second, and I would like to congratulate the driver of the machine whose number was, I believe, WA 4084, on a most marvellous exhibition of cool judgment and magnificent driving. The bank he charged up was strewn with large boulders, and how he avoided them is a mystery. Were we all possessed of such iron nerve the high roads would be much safer for such as Sheffield.

NOVICE.

OBTURATOR RINGS FOR MOTOR CYCLE ENGINES.

Sir,—Referring to the remarks of "C.C.C.," in your issue of August 4th, advocating the use of obturator rings for motor cycle engines, I have had a fair amount of experience with rotary aero engines, and found that, taking an average of thirty hours running at 1,130 to 1,200 r.p.m., the obturator ring gets burnt at the gap, so that when overhauling the engine new rings have to be fitted. This does not refer to an aluminium obturator ring, but to the copper and silver alloy ones. As I am still rather interested in aero engines, I should like to know what make of engine is fitted with aluminium obturator rings.

Say one of these rings was fitted to an ordinary motor cycle engine and ran for fifty hours at 20 m.p.h., that only makes a difference of 1,000 miles. Double that, and you would only get 2,000. How many riders nowadays would care to have to fit new piston rings after every 2,000 miles? Again, compare the lubrication system of the rotary aero engine to the present day motor cycle engine. No, sir, I am afraid fitting an I shaped obturator ring to a motor cycle engine would not prove satisfactory, except from the point of view of the agent who supplied it. MONO.

Duxford.

MORE EXTENDED ROAD TESTS SUGGESTED.

Sir,—I should like to endorse your editorial remarks on "Running-in."

I have just had a long and troublous spell of adjustment on a new machine of expensive make, and would suggest that all motor cycle manufacturers should lay out a test course around their works, completed machines to be required to make a certain number of rounds of the course (including a test hill) to a very close schedule and checked petrol consumption. This would eliminate such troubles as overheating due to oversize jets, or loose parts, etc. I would suggest, too, that only stock machines selected by a club official should be permitted entry in reliability trials.

I cannot believe that some machines are subjected to any works tests at all, else how is it possible to despatch a new machine so spotlessly clean?

Some manufacturers make machines with fixed and some with adjustable ignition. In the former case, would it not be a reasonable compromise to interconnect the air and ignition levers so that with closed air we get retarded ignition and vice versa?

On automatic carburettors the automatically operated air slide could be made sufficiently powerful in action to operate the ignition advance, and so we could achieve single lever control. Of course, I admit that the scheme is imperfect; but think it superior either to fixed or ordinary adjustable ignition. It would be interesting to hear the views of others.

Stafford.

IDEALIST.

ENCLOSED AND OIL-COOLED VALVES SUGGESTED.

Sir,—Mr. Bradshaw tells us that an engine may be cooled with oil. He then encloses his cylinders in the crank case to prove his assertion. Well, why doesn't he enclose the valves as well? It seems that improvements in various engine details goes on continually; but no one seems to trouble about the valves. It seems hardly the thing to make sure that all the other parts get ample lubrication, yet the

valves, surely one of the most important parts, have to "carry on" with no lubrication whatever, and in a position where they are subject to heat and dust as well. Is it not possible to enclose the valves, as in a car, with a detachable plate, draw the mixture actually through the valve guide, as we used to do in the days of the old a.i.v. engine, and so do away with the annoying air leaks which upset our carburation, especially at low speeds, and, at the same time, arrange that oil shall be supplied to the valve stems and springs?

It seems that an engine on the lines of the Martinsyde, with overhead exhaust and side inlet valve could be best adapted to this arrangement. The various attachments sold to stop air leaks are all very well in their way, but at best can only be described as makeshifts.

Why do not more people fit sidecar wheel brakes? Let them come out here a bit, then they would find the need for such brakes; also, for a brake which will stop on if required, on the same lines as a motor car brake. Possibly some of the competitors in the International Six Days in Switzerland could support these statements! C. E. CLARK.

SUNDAY COMPETITIONS.

Sir,—Your leader in the issue of *The Motor Cycle* for August 18th was discussed at our board meeting on Saturday last, and I was instructed to write strongly protesting against your statements re Sunday trials.

You appear in the South to be entirely ignorant of the conditions ruling in the North of England.

Sunday is absolutely the only day where it is possible for the members all to meet, and, as you are no doubt aware, we can fix a comparatively stiff course for a reliability trial, without interfering in any way with the section of the community who are in opposition to our type of pleasures.

We have more than one course in the North of England where we could hold a speed trial, which is more than one mile from any house, and probably five miles from the nearest church. Also, as a very large proportion of the community, at least in our area, are enthusiastic motor cyclists, or relatives thereof, it is looked upon in a totally different light from what seems to be the accepted standard in the South.

J. H. HALL,

Secretary North-Western Centre, A.C.U.

[From the earliest days of the motor cycle movement *The Motor Cycle* has been averse to Sunday sporting competitions, and although all our readers may not agree with us on this point, our opinion unquestionably is supported by the bulk of public opinion, and by the Auto Cycle Union, and the British Cycle and Motor Cycle Manufacturers' Union. Conditions such as mentioned by our correspondent prevail in almost every part of the country, and with any large club or centre. Sunday, probably, is the most convenient day, but this does not make it any more propitious. No one can cavil at the popularity of Sunday touring, but we affirm that the best interests of the sport are not served by holding sporting events for a comparatively small number of motor cyclists at the inconvenience of the public.—Ed.]

16,000 MILES—ONE OVERHAUL.

An enthusiastic rider of a twin-cylinder Ariel sidecarrier, Mr. Monk, Waltham Abbey. He reports that his machine has covered 16,000 miles, and the engine has only been taken down once since it was delivered.

PROTECTING A DISABLED LEG.

Sir,—In reply to "Dislip's" letter, I am similarly disabled to him, in the left leg, and used to ride a $2\frac{1}{2}$ h.p. Ivy with footboards, but found that on rough roads my foot would not stay on the boards, very often jolting right off. On this machine I had several left-hand side-slips, but found that if I kept my foot on the board and did not attempt to keep myself up with it I would fall on my shoulder, and the handle-bars would prevent the machine from crushing my leg to a detrimental degree.

I am now riding a $3\frac{1}{2}$ h.p. three-speed Norton, which is fitted with footrests, and have found them much more satisfactory than footboards, the rests in this case being rather far back, so that my weight helps to keep the feet firmly down.

Incidentally, I might add that the weight of my present machine is about 300 lb., and I am riding solo.

Birmingham.

NON-HURT

THE F.N. EULOGISED AND CRITICISED.

Sir,—Many years ago, when motor cycles were noisy, unpleasant things, the four-cylinder shaft-driven F.N. astonished and charmed everybody by its vibrationless and comparatively silent running.

But, for some reason, this in many ways unique machine has failed to become popular over here in the same way as other foreign makes—American, for example.

Perhaps it is the altogether unconventional appearance, long high frame and handle-bars, together with the purely imaginary complications of construction, that account for the very few modern F.N.'s encountered on the road to-day.

My own solo experiences of one of the more recent 7 h.p. models may possibly serve to dispel any such impressions that may still remain among some of your readers.

I have had many modern machines—British and American, $3\frac{1}{2}$ to 7 h.p., twin, single, and even four-cylinder—but none has, in my opinion, quite earned the high praise I willingly accord this 7 h.p. F.N. of mine.

At no speed is there the slightest sign of splutter, back-fire, or racing. It may be the three-jet Zenith, combined with the superb balance of the engine; it may be the petrol-benzole-Castrol mixture on which I run. The fact remains that, at less than balancing pace, this machine will run without manipulation of any lever or pedal on the low speed, and perform in a similar manner with the clutch half depressed on top. I have never seen the like of it except in a very good car.

The maximum pace is much faster than the somewhat "unsporting" build and riding position will allow. I put it at somewhere in the neighbourhood of 50 m.p.h.

The engine runs up to this pace from zero, on a slight up grade, without a tremor of vibration. Consumption is from 50 to 60 m.p.g. solo.

I have not yet succeeded in making the engine hot or even moderately warm. This is rather a drawback, as the machine, excellent in all other ways, declines to pull anything but bottom gear until thoroughly warmed up, which means a mile on second or bottom speed unless one is willing to wait till the engine behaves properly on the stand.

As regards riding comfort, I have certainly ridden more comfortable machines. The fact that one cannot grip with one's knees on the F.N., combined with the small 26in. wheel and rather "bouncy" spring forks, make the negotiation of a really bad road (Cricklewood to the Aerodrome, for example) an evil dream! but for anything like a good road the position is particularly comfortable and free from strain.

Other excellent points about the F.N. include the positive pressure lubrication, which appears to function at all speeds to perfection.

The three-speed gear box is quite noticeably silent, which cannot, however, be said of the bevel, which, though efficient and otherwise excellent, is inclined to whirr badly between 15 and 25 m.p.h. This is perhaps the one annoying feature of the whole machine.

The clutch is, with the exception of the A.J.S. and Lea-Francis perhaps, the best I have ever handled, but it needs the oilcan rather too frequently.

To sum up my impressions, this 7 h.p. F.N. possesses all those "four-cylinder" features which one associates with a really good modern light car, and which no twin-cylinder engine, however well balanced, can ever quite attain. Its riding comfort, reliability, flexibility, and general excellence,

combined with the magnificent finish and workmanship (which, to me, is a joy to contemplate), make the modern F.N. a most attractive machine to ride. Usual disclaimer.
Watford.

NK 2098.

FOR AND AGAINST THE HINGED FORK.

Sir,—I feel that "Warum" voices the sentiments of many scientific motor cyclists in his letter criticising the Triumph type of fork, which is apparently a simple lever of the first order.

If a shock from the road be considered, it will be seen that it must be split up into two components—one along the centre line of the fork and the other at right angles to this, representing the line of action of the two extremities of the fork, where it partakes of a radial motion, working against the spring. A glance at a parallelogram of forces, which could be constructed at any given position of the fork, will show that there must always be a certain amount of actual thrust on the fork hinge, or bearing, and that this thrust is nearly

Diagram explaining Mr. L. S. Lyons's remarks on the hinged type of fork.

as great as the road shock itself. Moreover, until the fork assumes an angle of 45° with the vertical, the thrust on the fork hinge is always more than the component acting against the spring.

It would seem that a hammering action on the bearing would immediately follow any looseness in the hinge, which, if not soon rectified, would quickly accelerate in intensity.

It will also be seen that many bad road shocks, such as those caused by pot-holes, would incline their line of action towards the centre line of the fork. In such cases, just

when the fork requires to be most flexible, the decreased moment caused by this deviation from the vertical places the fork at a disadvantage and the hinge is called on to take more of the thrust than ever.

In the parallel link type of fork, the shock is absorbed directly by the spring or springs, but in the type under discussion the shock has to act on the hinge before the spring can dissipate it. I consider the Beardmore-Precision fork to be a vast improvement, as it transmits the shocks directly to the cantilever spring, the hinge under the steering column functioning more as a pure guide than as a thrust bearing.

The only justifications I can perceive for the Triumph type are fewness of working parts and consequent low cost.

L. S. LYONS.

SUMMARY OF CORRESPONDENCE.

Capt. S. Wallick recommends very highly his Connaught lightweight, which he uses in the course of Government work over a large and scattered district.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"
The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Priced net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

"MOTOR-CYCLE REMINISCENCES."

By "Ixon," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Priced net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from LILFEE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

Questions and Replies

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

ENGINE WILL NOT RUN.

Q. My 2½ h.p. Levis recently stopped suddenly. I tried the plug and found it perfect; there was no stoppage in the petrol pipe, so I had the engine dismantled and found all in order. I re-assembled it, and still got no result. I have tried plug, compression, petrol, carburetter, and crank case leaks. The magneto has been tested under compression by the makers.—H.S.

If the plug, compression, carburetter, and magneto are in order there is absolutely no reason why the engine should not run quite satisfactorily, provided it was correctly reassembled. You might verify the timing, as it is quite possible that the magneto sprocket slips on the armature shaft. The spark should be timed to occur when the piston is on top dead centre, with the control fully retarded. It is also advisable to make sure that the fly-wheel is tight on the engine-shaft.

COMPRESSION RATIO.

Q. Is it at all possible to get too high a compression in a 2½ h.p. two-stroke engine? In taking mine down last winter, I found a ¼ in. packing between the cylinder and crank case, and, thinking to improve matters, substituted a ½ in. instead. Although I can get a good speed on the level, I cannot climb hills as well as my friend who has the same make of machine; but his compression is not half so good as mine. I should be glad to hear if there is any formula on compression space compared with the bore and stroke to get the best efficiency.—H.H.S.

By substituting a thinner packing between the cylinder and crank case you alter the timing of a two-stroke engine. We cannot give you any formula on compression space in relation to bore and stroke, the compression ratio in most commercial engines has usually been arrived at by experiment. It does not follow that increasing the compression will improve the efficiency of any particular engine, other undesirable complications may result.

REMOVING BELT FROM IDLE MACHINE.

Q. When garaging a machine, is it at all necessary or advisable to remove the belt?—M.J.

It is not necessary to remove the belt, although it would be advisable to do so if the machine is left for a long period.

Important Dates.

Mon., Aug. 29th, to Sat., Sept 3rd
A.C.U. Six Days Trial.
Thurs., Sept. 8th—Norfolk M.C. and
L.C.C. Open Speed Trials.
Sat., Sept. 10th—Liverpool M.C. Open
"Reliance Cup" Trial.
Sat., Sept. 17th—
Grand Prix Race for Cycle Cars.
Sat., Sept. 17th—Midland Centre A.C.U.
Open Hill Climb.
Fri., Sept. 23rd, to Tues., Sept. 27th—
Anglo-Dutch Reliability Trial.
Sat., Sept. 24th—M.C.C. Sporting Trial.
Sat., Oct. 1st—Doncaster and District
M.C.C. Open Speed Trials.
Mon., Nov. 28th, to Sat., Dec. 3rd—
The Olympia Motor Cycle Show.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—
Scottish Motor Show (including motor
cyclists).

GEAR QUESTIONS.

Q. Is it possible to put a kick-start of some description on an N.S.U. gear? and can a gate change be fitted? Is there anything to damage or unscrew if I run this gear left-hand instead of right, as I am thinking of converting mine into a countershaft?—H.R.

A kick-starter cannot be fitted to the N.S.U. gear, but if you transferred it to the countershaft position, it might be possible to arrange some form of kick-starter working on the engine-shaft. We do not know of any control now available which can be substituted for the standard rotating handle. You cannot run the gear in the opposite way from that which is intended by the makers, as you will tend to unscrew the pulley from the main body of the gear, thus causing the two sections of the main ball bearings to come apart.

WHICH VALVE NEEDS ATTENTION?

Q. Having been a motorist and motor cyclist for nineteen years, I have always, in taking down an engine, looked at the exhaust valve first, since I have always believed that if the exhaust valve was all right the inlet valve, which has far less burning, would be all right also. A friend, whose experience is very great, says he always looks at the inlet valve first, since, if that is all right, the exhaust will be all right. Who is correct?—K.C.

It is usual to pay more attention to the exhaust valve when a machine is being overhauled, as in many cases the seating of the inlet valve remains in perfectly good order for very long periods, even if the exhaust valve seating is badly burnt. It certainly does not follow if the inlet valve is in order that the exhaust valve seating will also be undamaged.

LACK OF SPEED.

Q. Having recently purchased a two-stroke lightweight, I find I can only get 28 to 30 m.p.h. out of it, which I put down to the carburetter; the timing is correct, no air leaks being present. I have a 28 jet and cannot obtain any more speed after opening the throttle one-third and the air threequarters.—C.H.E.

If your machine is a new one, it may not be possible to obtain a higher speed until it has had some use, as the plain bearings in these engines usually take some considerable time before becoming perfectly free. You should find that the running will improve over the first 1,000 miles. Possibly a slightly larger jet would improve matters, and you should make quite sure that the petrol supply is unobstructed. Two-stroke engines are particularly susceptible to variations in ignition timing, and you might try the effect of permanently advancing the ignition a little more than the standard setting of the makers. Set the contact breaker so that the points fully separate with the control at full retard, when the piston is on top dead centre.

TWO-SPEED HUB GEAR.

Q. Would you please tell me (1.) how to prevent oil working on to the brake drums of a Roc two-speed hub? (2.) What is the cause of a grating sound in these gears when coasting down a hill in free engine?—A.A.

(1.) Probably you are using an oil which is too thin, and at the same time over-lubricating the gears. Try a very thick engine oil, or have the gears dismantled and packed with grease. (2.) Without actual inspection it is impossible to explain the cause of the grating sound which arises from the gears. It may be due to one of the contracting bands rubbing on some part of the hub.

POWER FOR FAMILY SIDECAR.

Q. Anticipating the purchase of a sidecar outfit, I am told that a $3\frac{1}{2}$ h.p. machine will be quite up to my needs. I weigh 15 st., my wife 11 st., and our two children weigh about 10 st. together. Will you favour me with your opinion, and can you give me any idea of the best type of machine?—W.H.A.

A good single-cylinder machine of 4 or 4½ h.p. should answer your requirements perfectly well, provided you do not expect too much in the way of hill-climbing with such a heavy load. The chief difficulty will be fixing up a sidecar with a sufficiently roomy body on the size of chassis usually supplied with a machine of this type. In other respects such engines are quite capable of dealing with the work, but a 6 or 8 h.p. machine would be better, especially if you have any serious hills to negotiate in your usual runs.

A KNOCK AT SPEED.

Q. My Junior Triumph has lately developed a knock. This begins as soon as the engine gets warm, and, if speed is increased, assumes alarming proportions. At a slow speed it is not audible. To cure it I have taken the engine down and decarbonised it, fitted new piston rings, new gudgeon pin, and taken up the big end bearing, but all to no purpose. Thinking it was not getting enough oil, I poured oil into the crank case, and this had a good effect until the blue smoke disappears from the exhaust when the knock recommenced. — There is no visible wear in the cylinder, and all the bearings appear correctly adjusted throughout. The magneto is timed according to the makers' instructions; it has been retimed several times without altering the "knock." Do you think "piston slap" is the cause? If so, I suppose the remedy is a new piston. Would an auxiliary oil pump be of use? The petrol system is the one at present used.—A.R.H.B.

If the engine bearings are all in good order, as your letter implies, in all probability it is the piston which is responsible for the knock. We take it that you have made quite sure that the noise does not arise from any part of the transmission, and also that the sparking plug is not giving rise to pre-ignition. It should not be necessary to use an auxiliary oil supply, as the petrol system works perfectly well on these engines. Correct adjustment of contact breaker gap ($\frac{1}{32}$ in.) should be assured.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"A.J.L." (Lewisham).—Any kind of puncture-proof tyre filling.

"W.R.H." (Thurgoland).—Any make of attachment for pedal cycle, other than Auto-wheel.

"H.S." (East Newport).—Millford-Rock sidecar on 8 h.p. Sunbeam: Strength of wheel in comparison with enclosed axle type, comfort, and safety of connections.

"G.H.T." (Crickieth).—Cox-Atmos carburettor on 6 h.p. A.J.S.

"W.J.S.B." (Taunton).—A.V. Monocar: Hill-climbing, braking, stability, suspension, and general remarks.

"F.I.A." (Windsor).—A.B.C.: Consumption, springing, reliability (especially of valve gear).

READER'S REPLY.

SIDECAR WORK FOR AN ESSENTIALLY SOLO MOUNT.

Re "J.J.L.'s" query in the issue of August 18th concerning conversion of a $3\frac{1}{2}$ h.p. N.U.T. for sidecar work: I suggest a smaller belt pulley on the countershaft gear. This can be brought to 3 to 1, and consequently reduce the total gear ratio on top to 5 to 1. "J.J.L." might like to hear of the suggestion. I am doing the job to my machine.—KENNETH S. HUGHES.

RECOMMENDED ROUTES.

LEICESTER TO BRIDGEND.—G.H.H.

Leicester, Blaby, Lutterworth, Rugby, Blue Boar Corner, Bubbennhall, Leamington, Warwick, Stratford-on-Avon, Alcester, Flyford Flavell, Worcester, Powick, Malvern Link, Great Malvern, Wynds Point, Ledbury, Ross, Wilton, Monmouth, Raglan, Usk, Llangibby, Caerleon, Newport, St. Mellons, Cardiff, Canton, Ely Station, St. Nicholas, Bobvilston, Cowbridge, Brocastle, Bridgend.

WOLVERHAMPTON TO OWSTON FERRY.—A.T.P.

Wolverhampton, Gailey, Penkridge, Dunston, Stafford, Weston, Uttoxeter, Rocester, Mayfield, Ashbourne, Longcliff, Grange Mill, Via Gellia, Cromford, Matlock Bath, Matlock Bridge, Rowsley, Beeley, Chatsworth Park, Edensor, Baslow, Chesterfield, Brimington, Staveley, Barlborough, Whitwell, Worksop, Ranby, Retford, Sandby, Beckingham, Walkeringham, Minsterston, Haxey, Owston Ferry. Approx. 119½ miles.

BARROW TO CHESTERFIELD.—G.H.R.

Barrow, Dalton, Ulverston, Haverthwaite, Newby Bridge, Lindale-in-Cartmel, Levens Bridge, Kirkby Lonsdale, Ingletton, Clapham, Settle, Long Preston, Hellifield, Gargrave, Skipton, Bolton Bridge, Addingham, Ilkley, Burley-in-Wharfedale, Otley, Pool, Arthington, Collingham, Bramham, Aberford, Ferrybridge, Doncaster, Balby, Wadworth, Tickhill, Oldcoates, Carlton, Worksop, Whitwell, Barlborough, Staveley, Brimington, Chesterfield. Approximately 169 miles.

Three-wheeler Price Reductions.

A new model of the T.B. runabout is now available, fitted with J.A.P. engine, at the reduced price of £235.

Found on the Road.

An aluminium number plate with rear lamp attached was recovered after it dropped from a sidecar machine at Grays, Essex, by Mr. A. Carder, 106, London Road, Grays, on August 17th.

The Loveland Magneto Lighting Device.

In our last issue the magneto lighting device illustrated on page 223 was described as the Lovelace. The correct name of the manufacturers is Loveland Bros., Crescent Magneto Works, Norbury, London, S.W.

British Success in Canada.

In the recent 540 miles reliability trial of the Toronto M.C.C., the best trade performance was made by a Triumph rider, B. Mallory, whose machine was equipped with Bates tyres and Amac carburettor. The second amateur was also mounted on a Triumph. Amateurs had to average 20 m.p.h., but the trade riders ran to a 24 m.p.h. schedule.

Cross-Channel Rates for Motor Cycles.

We have received a leaflet from the London, Brighton, and South Coast Railway Co., concerning their Newhaven-Dieppe service. Motor cycles not exceeding 130 lb. in weight are conveyed from Newhaven to Dieppe for 12s., and 9d. is charged for every 10 lb. or part of 10 lb. over this weight. Sidecar outfits not exceeding 200 lb. are carried for 31s. 6d., and the same excess rate is charged.

Mem. for Trials Secretaries.

Samples of direction arrows for reliability trials, which are supplied on request to motor cycle clubs, have been submitted to us by the Leicester Rubber Co., Ltd., Post Office Place, Leicester. The arrows are of large dimensions, and have large heads, while, whether the competitors are expected to turn right or left is indicated by L. or R., printed in red. Similar signs are issued showing when the competitors have to travel straight on.

Review.

"Where's Where: The A.B.C. Motor Marine and Aircraft Guide, 1921," by W. C. Bersey and A. Dorey (17s. 6d.: The Technical Publishing Co., Ltd., 1, Gough Square, London, E.C.4), is a useful guide to various towns and villages in the United Kingdom, giving a large amount of information of value to motorists, such as Parliamentary Divisions, police authorities, registration authorities, speed limits, railways, local clubs, motor omnibus services, and R.A.C., A.C.U., or A.A. and M.U. appointed hotels and garages. There is also a list of manufacturers and dealers in motor cars, motor cycles, and parts.

SPECTACULAR RACING ON THE SANDS.

Wolverhampton Machines share Chief Welsh Championships at Pendine. Exciting Finishes.

FIVE laps of a two-mile course, with a complete "about turn" each mile, at a speed of considerably over 60 m.p.h., was the remarkable record of George Dance and one or two other star riders at the West Wales Centre A.C.U. open race meeting at Pendine Sands last Thursday.

Motor cycle races have been staged at Pendine for nearly twenty years now, but not until last week has there been an officially open meeting on that fine natural speedway. This is rather surprising, for undoubtedly racing on the sand has an attraction all its own, Thursday's being quite the most interesting British speed event of the year, excluding only the Tourist Trophy and the 500-mile race.

Twelve Events in Three Hours.

There were twelve events down for decision, and from the rather belated start to the commendably prompt finish (4.15 p.m.), the interest of a thronging mass of spectators was kept at fever pitch.

Class 1 was a 300 c.c. championship race of four miles, in which 2½ h.p. J.A.P.-engined machines were in the majority; they had things all their own way, although Morris Isaac (2½ New Imperial-Jap) won fairly easily. Result:

- 300 c.c. OPEN CHAMPIONSHIP (Distance, 4 Miles).
1. Morris Isaac (2½ New Imperial-J.A.P.).
 2. W. Edwards (2½ Omega).
 3. Ivor Thomas (2½ New Imperial-J.A.P.).
- Winner's time, 4m. 37s.

Dance, (on an o.h.v. 2½ h.p. Sunbeam) and Howard Davies (on a T.T. A.J.S.) were bracketed favourites for the 350 c.c. championship, in which the distance had

ton rider just led the field first time round; very close on his heels, and all in a bunch, were Sgonina (on his o.h.v. Norton), Ogwin Lewis (Norton), and Jack Thomas (Norton). At the fourth mile the positions of the first two were unchanged, but H. R. Davies had crept up to third. Sgonina led at the third lap, but Dance was ahead again at eight miles, and at ten—the finish.

- 350 c.c. OPEN CHAMPIONSHIP (Distance, 10 Miles).
1. George Dance (3½ Sunbeam).
 2. C. Sgonina (3½ Norton).
 3. H. R. Davies (2½ A.J.S.).
- Winner's time, 9m. 18½s.

The final championship event—for machines of unlimited capacity—was, but for the absence of Sgonina, and the presence of a fast newcomer, F. P. Bush (7-9 Harley-Davidson), almost a repetition of the previous race. First lap order was retained throughout, as follows:

- UNLIMITED OPEN CHAMPIONSHIP (Distance, 10 Miles).
1. George Dance (3½ Sunbeam).
 2. H. R. Davies (2½ A.J.S.).
 3. F. P. Bush (7-9 Harley-Davidson).
- Winner's time, 9m. 24s.

Two things probably account for the slower time in the last race: (1) There was no Sgonina to keep Dance thoroughly busy, and (2) the turns were becoming dangerously wet—so much so that one or two of the local men became somewhat hair-raising in their cornering.

One word dismisses Class 5, the open one mile sprint: "Dance," who won by what seemed at least 300 yards. Unfortunately, the sprints were not timed.

- OPEN MILE SPRINT.
1. George Dance (3½ Sunbeam).
 2. F. P. Bush (7-9 Harley-Davidson).
 3. Ivor Thomas (3½ Sunbeam).

Exciting "Closed" Events.

Now followed a similar series of races (all of four miles) confined to members of West Wales clubs; but they were not one whit less exciting than the open classes.

The result of the lightweight class speaks for itself; the other five competitors "were nowhere." It was noticeable, too, that several of the local riders failed to "get down to it" in the approved manner, thus losing fully 3 m.p.h. on the straight.

- 300 c.c. WEST WALES CENTRE FOUR MILES RACE.

1. Morris Isaac (2½ New Imperial-J.A.P.).
 2. W. Edwards (2½ Omega).
 3. H. Church (2½ Velocette).
- *Special prize for fastest two-stroke. Winner's time, 4m. 36½s.

The "2½ h.p.s." struggle deserves fuller comment, for Morris Isaac rode Dance's Sunbeam, Jack Thomas Davies's A.J.S., and T. G. Stevens the Brock-Blackburne. Isaac obtained a fifty yards lead by superior acceleration at the start, which he held for one lap. Next, and last, time round he was seen to hold his position, as they swept down to the finish; apparently he did not realise how closely he was being pursued, for almost right on the line the A.J.S. drew past, and won "by a short wheel." Result:

- 350 c.c. WEST WALES CENTRE FOUR MILES RACE.

1. Jack Thomas (2½ A.J.S.).
 2. Morris Isaac (2½ Sunbeam).
 3. T. G. Stevens (2½ Brock-Blackburne).
- Winner's time, 4m. 25s.

Thomas was rather keen on riding the victorious A.J.S. in the next class; but, as he had entered another make, the committee was adamant. F. J. Boshier Jones had been riding so well and consistently in almost every event, and just failing to get placed, that we all hoped he would retain his first lap short lead in this race. It was not to be, however, for, after a thrilling tussle, Ivor Thomas (Sunbeam) won by a length from P. Bush (Norton), with the Douglas third.

- 560 c.c. WEST WALES CENTRE FOUR MILES RACE.

1. Ivor Thomas (3½ Sunbeam).
 2. F. P. Bush (3½ Norton).
 3. F. J. Boshier Jones (3½ Douglas).
- Winner's time, 5m. 56½s.

Flat Twins to the Fore.

In the last four-mile race Bush's Harley led the field throughout, but Boshier-Jones grimly held second place, and was but a length behind the big twin at the finish; and there were ten starters.

- UNLIMITED WEST WALES CENTRE FOUR MILES RACE.

1. F. P. Bush (7-9 Harley-Davidson).
 2. F. J. Boshier Jones (3½ Douglas).
 3. F. J. Bush (3½ Norton).
- Winner's time, 5m. 48½s.

Luther Davies had apparently saved his A.B.C. to good purpose for the last solo class, for he won the "mile" by about ten yards from a Brough Superior.

- UNLIMITED ONE MILE WEST WALES CENTRE SPRINT.

1. Luther Davies (3 A.B.C.).
2. Handel Davies (8 Brough Superior).
3. F. P. Bush (7-9 Harley-Davidson).

Both the sidecar races were tame, there being only three starters in each case. The "Veriot" had 750 c.c. o.h.v. Precision twin engine.

George Dance does not rest on his laurels for long. On Thursday he rode in four races, and won three, including the 560 c.c. and unlimited championships.

- 750 c.c. SIDECARS ONE MILE SPRINT.

1. R. W. Hill (5-6 Veriot-Precision sc.).
2. — Griffiths (5-6 James sc.).

- UNLIMITED SIDECARS ONE MILE SPRINT.

1. Handel Davies (8 Brough Superior sc.).
2. R. W. Hill (5-6 Veriot-Precision sc.).

Not on the Programme.

As a consequence of the close finish in the local 350 c.c. race, an extra match was arranged between the A.J.S., the Sunbeam, and the Brock, piloted by Jack Thomas, Isaac, and Brockbank respectively. It was anybody's race at the second mile, but the Sunbeam drew ahead before the last turn, and finished an easy first.

No accident, mishap, or untoward incident marred the day, and the organisers are to be heartily congratulated in pointing the way to other centres on how to liven up a speed event.

Morris Isaac, a prominent Carmarthen rider, who, on a 2½ h.p. New Imperial, won the 300 c.c. championship with ease.

been increased to ten miles, i.e., five laps. The field of five all got off the mark well, but the favourites soon drew ahead, and for two laps there was not more than fifty yards between them. Then the Sunbeam toured in with an oiled-up plug; two others retired; and Brockbank (2½ Brock-Blackburne), who was none too happy with his brakes, was quite unable to catch the T.T. winner.

- 350 c.c. OPEN CHAMPIONSHIP (Distance, 10 Miles).

1. H. R. Davies (2½ A.J.S.).
 2. H. F. Brockbank (2½ Brock-Blackburne).
- Winner's time, 9m. 34s.

Dance, however, retrieved himself in the 560 c.c. championship. Fourteen starters made the "get ready" period an ear-splitting one, but an exceptionally fine start compensated those standing by for such minor inconveniences. On an o.h.v. 3½ h.p. Sunbeam the Wolverhampton

New Models.

There are several 1922 models being tried out in this week's big trial

January to June Index.

An index to the volume of *The Motor Cycle* from January to June last may be obtained from the publishers, Messrs. Iliffe and Sons Ltd., 20, Tudor Street, London, E.C.4, at a cost of 7d., post free.

On Point Duty.

Before being assigned the duty of directing traffic, those provincial policemen who merely shut their eyes and wave their arms should serve an apprenticeship in London.

Notable Absentee at Pendine.

Whilst practising, on the previous day, for the Pendine Sands open race meeting last Thursday, Dr. Lindsay, the well-known Welsh motor cyclist, "crashed" rather severely. His absence from the meeting, where he was a favourite for several events, was greatly regretted, but it is to be hoped that by the time these lines appear he will have quite recovered.

Obituary.

We regret to announce the death on the 23rd ult. of Mr. Charles Vernon Pugh, J.P., founder of the Whitworth Cycle Co. His name was best known to motor cyclists in connection with Messrs. Rudge-Whitworth, Ltd. He was also chairman of C. H. Pugh, Ltd., and the Lancheester Motor Co. His loss will be felt throughout the trade, and our sympathies are extended to his widow and children.

Next week's issue will contain an illustrated description of the Six Days Trials, written by members of the staff of this journal, who are accompanying the competitors on the route.

Estate Planning.

Those who are at present planning new suburbs should bear in mind that a large percentage of prospective buyers of houses from £1,000 to £1,500 are owners of motor cycles or light cars. Despite the known demand for houses with garages or "with room for garage," speculative builders still carve up the land as if the main object were to exclude motorists.

Special Features.

MACHINES IN THE SIX DAYS TRIALS.
TWO ON TOUR.
PILLION RIDING IN THE DESERT.

Further Successes of o.h.v. Engines.

Overhead valve engines practically swept the board at last week's big race meeting of the West Wales Central A.C.U.

Hundred Miles Race in Ireland.

On the 17th inst. the Ulster M.C.C. will hold speed trials on Magillan Sands, including a hundred miles scratch race for the Championship of Ulster. All machines up to 600 c.c. are eligible. There will also be a hundred miles handicap for solo machines of any capacity.

A New Italian Machine.

In the recent Biella-Oropa hill-climb a new Italian motor bicycle considerably distinguished itself. This was the 2½ h.p. Maffei, ridden by Mario Sassi, who won his class, beating a Douglas, A.B.C., and a Frera. The new Maffei is a high-efficiency twin-cylinder V type, with valves in the cylinder head. The frame is on standard lines. Sassi competed in the French Grand Prix, but retired early owing to a fall.

A CHANGE FROM TRIALS AND SPEED EVENTS.

(Left) Matchless owners in the wheel-changing competitions at the recent Woolwich, Plumstead, and District M.C. Gymkhana.
(Right) Scott and Sunbeam riders busy netting eggs.

A.C.U. Six Days Trials

88 Starters in this Week's Big Trial. Well-known Makes Absent. 1922 Models Foreshadowed.

USUALLY, the day preceding the A.C.U. annual Six Days Trials is one that spreads animation over whichever town from which the trial may be starting. Last year it was Darlington, the year before Llandrindod Wells; and most of the competitors arrived on the Saturday evening, filling all the important hotels, where regulations and prospects were discussed at length.

With the riders were prominent members of the trade, and in hotel foyers they expressed their views on divers subjects of interest to all who have the welfare of the motor cycle at heart.

Such occasions were general reunions of manufacturers, accessory makers, riders and the press, as are the T.T. races and the Show; but this year at Brooklands all seemed changed.

There had been no fraternising prior to the official examination last Sunday. The competitors arrived from north, south, east and west, and very few manufacturers accompanied them. Yet one cannot say that the total entry was a poor

one; indeed, it was very good, for nearly a hundred competitors are sufficient to make the trial quite representative.

Rear brake mechanism on the new chain drive O.K. sidecar outfits. Adjustment is provided at two points.

All the same, there can be no doubt that the interest of the event would have been enhanced had those few important firms who have withheld their support been represented. We are sure that this decision not to support the big British trial in which the general public takes such an interest, is arousing criticism and absurd interpretations.

The two main points in the A.C.U. regulations to which this section of the trade took exception are the petrol and oil consumption tests, which are considered to be unreasonable, and the possibility of losing awards on silence. It also appears that there has been friction between the Manufacturers' Union and the A.C.U.; and the withholding of support is, we are informed, more in the nature of a protest than anything else. Nevertheless, the public has a right to think what it likes until the absent manu-

facturers make out their case; but in the meantime it should be borne in mind that, while the machines of some of the absentees do not enjoy reputations for silence, others are notoriously quiet.

All the machines we have in mind have proved their reliability and hill-climbing capabilities in previous Six Days events, and naturally the public, which is insistent with its demands for "reasonable silence" and economy, would have liked to have seen how they performed under this year's regulations.

Among the better known firms who decided not to enter this year are the makers of the following:

- | | |
|----------------------|------------------|
| Triumph. | Indian. |
| Humber. | Zenith. |
| Douglas. | Norton. |
| Beardmore-Precision. | Levis. |
| Blackburne. | Verus. |
| B.S.A. | Dot-Jap. |
| Sunbeam. | Velocette. |
| Diamond. | N.U.T. |
| Enfield. | Harley-Davidson. |

Bowden extra air valve used on all the A.J.S. machines. The inset shows the mounting of the handle-bar control.

The new internal-expanding rear brake fitted to the Coulson-B.

All Sunday afternoon competitors formed a queue to enter the enclosure where the machines were officially examined and sealed.

Of these, however, private owners are riding a B.S.A., Norton, Sunbeam, Harley-Davidson, and Douglas.

As an offset against the above-mentioned there are at least two well-known makes which re-enter the official big trial after several years' absence. We refer to the Rudge entry of four, and the three four-cylinder F.N.'s.

The various types of engines fitted on the competing machines in this and last years' trials are shown below. It will be seen that flat twins are not very well represented this year, but otherwise the 1921 entry may be said to be representative of all the types of machines now offered to the public.

	Singles.		V Twins.		Flat Twins.	
	1921.	1920.	1921.	1920.	1921.	1920.
2-strokes	18	19	—	—	—	—
4-strokes	35	46	32	48	3	12

	Side-by-side Twins.		Three-cyl.		Four-cyl.	
	1921.	1920.	1921.	1920.	1921.	1920.
2-strokes	3	6	—	—	—	—
4-strokes	—	—	1	2	3	—

1921 and 1920 Entries Compared.

The numbers of machines in the various classes are as below, together with the figures of last year's entries:

		1921.	1920.
250 c.c. solo	..	8	14
275 c.c. solo	..	—	17
350 c.c. solo	..	16	25
500 c.c. solo	..	19	36
750 c.c. solo	..	10	3
1,000 c.c. solo	..	1	—
300 c.c. passenger	..	—	11
600 c.c. passenger	..	11	11
750 c.c. passenger	..	26+	21
1,000 c.c. passenger	..	4*	3
Over 1,000 c.c. passenger	..	95	133

* Cycle cars.

+ Including three cycle cars.

It must not be thought that the difference in the total entries is due entirely

to the differences between the A.C.U. and members of the Manufacturers' Union.

Several makers contemplate changing their models for 1922, and they are not yet ready. Last year there were four Harley-Davidsons in the trial, as against this year's single entry. This year there are but three Scotts, while last year there were six. In 1920 ten Rovers were entered against five in 1921, and New Imperials three in 1921 and four in 1920, Matchless five this year and six last. It would also appear that the 1921 Trial has failed to attract the private owner so much as in previous years.

THE COMPETING MACHINES.

There is nothing of a very startling nature in the specifications of the competing machines. Brakes, chains, and single lever carburettors seem to be the outstanding features. External expanding front wheel brakes—mostly the Webb type—are almost universal. James,

A.J.S., New Imperial, Rover, Ariel, and Douglas are amongst the many which have internal brakes on either front or rear, or both, wheels.

The tiny $2\frac{1}{4}$ h.p. New Imperials have adopted final chain drive, in addition to internal brakes for both wheels. M. C. Breese is riding a "light" 6 h.p. B.S.A., the standard engine being mounted in a modified $4\frac{1}{2}$ h.p. frame, without detachable wheels. This model may be included in the B.S.A. range next year. A small extra petrol tank is attached to the side of the main tank of Breese's machine.

New Models.

New models include a $2\frac{3}{4}$ h.p. Edmund with Blackburne engine, three-speed Burman gear box, and all-chain drive, and the new $3\frac{1}{2}$ h.p. Martinsyde, which is an attractive-looking solo mount.

The James twins have expanding brakes all round. The little two-stroke James has a new two-speed sliding gear

Filling up with petrol and oil at the official supply station, Brooklands.

A.C.U. Six Days Trials—

with clutch, kick-starter, and all-chain drive.

It is good to see the four-cylinder F.N.'s in open competition once more, and the four-speed P. and M.'s with sidecars form a novelty from the Cleckheaton works. An overhead valve Duzmo is competing with the close ratio Sturmey gear, and a new four-speed gear, which utilises chains instead of spur wheels, is fitted to Clayton Russell's "big four" Norton outfit.

Throttle and accelerator lever on L.H. Wells-Hawker

N. Hall and F. C. North are piloting 2½ h.p. O.K. two-strokes with sidecars attached. These little machines have three-speed Albion gears, all-chain drive, 26×2½ in. tyres, and a powerful parallel action rear rim brake. The performances of these tiny outfits will be watched with interest as will Capt. Peatty's little Hawker outfit, which did so well in the Scottish trials.

Another lightweight convert to chain transmission is the little New Hudson, which is also fitted with a Sturmey-Archer three-speed gear, with clutch and kick-starter. Expanding brakes are fitted to both wheels.

Carburettors.

Cox carburettors are fitted to a large number of competing machines. Croucher's Matchless has an Ekon single-lever carburettor—a new device which is reminiscent of the Eta carburettor, a design already published in *The Motor Cycle*. Dowson's Hawker has a Wex single-lever carburettor, but Wells, on a similar machine, pins his faith on the new Mills' single-lever instrument, which, in this case, is operated by an accelerator lever with a

Machines ready for the official seal. Mr. A. V. Ebbelwhite busy on a Norton outfit.

slow-running setting. All the A.J.S. machines have two-lever Amacs fitted with the Bowden extra air inlet.

Spare Wheels.

All kinds of positions are employed for the carrying of spare wheels. The Chater-Lea has a carrier well forward of the sidecar, whereas the James spare is almost parallel with the driving wheel, while the new sports Matchless outfits have their spare wheels, with extra spare cover, at the rear of the sidecars.

Although not a new machine, the 2½ h.p. A.J.S. is making its first really important effort in an open trial; the cylinder is reminiscent of the 7 h.p. machine, and all the fittings are in

keeping with the firm's high reputation. A Burman three-speed gear is fitted to Sprosen's Connaught, otherwise the Connaught entry is standard. All Rudge machines have engine-shaft clutches, three-speed gears, and, of course, foot-operated oil pumps. Two solo and one sidecar Dunells represent the large two-stroke, and the performance of this machine in last year's Six Days will not be forgotten. This year a new lighting set off the magneto is fitted to all three machines.

Two brakes on a rear belt rim are used by the Hawker and Henderson machines.

Spring frames are represented by Coulson, Raleigh, Matchless, and Edmund.

The new 2½ h.p. O.K. chain-driven sidecar that is being ridden by Neville Hall, a well-known exponent of lightweights.

A new twin model B.S.A. which differs from the standard twin in frame construction, the weight being considerably less.

The A.C.U. Six Days Trials.—

Amongst the cycle cars, the G.N.'s appear to be quite standard, except for cord-bound springs, and the T.B. has a neater radiator and compensated front wheel brakes. S. Hall's Morgan has a water-cooled M.A.G. engine, while H. F. S. Morgan himself is using a short wheel-base model.

We also observed that the Cedos has a vertical air intake to stop blow back. A new feature on this machine is the new type of cone brakes on the rear wheel; they are actuated together.

Some Alterations in the Programme.

The new 7.9 h.p. British Radial was not ready in time for the trial. The experimental engine is at present undergoing its bench tests.

Another machine which its manufacturers could not get ready is the Duzmo, entered in the name of O. Crossthwaite. His place has been taken by Arnold Eckersley, who offered to ride his new three-speed Sturmey-Archer model Duzmo in the trial.

Geoffrey Hill is riding Leslie Guy's Scott, as the latter has not sufficiently recovered from a recent spill.

The two new 4 h.p. New Hudson sidecar outfits, which were to have made their *début* to the public, did not materialise.

The brake test. Observe the A.C.U. official with flag carefully scrutinising H. F. Fellows on a 4 h.p. Coulson-B.

ELEVENTH HOUR IMPRESSIONS.

B RILLIANT sunshine with real summer heat attended the competitors during the official examination at Brooklands. It would not be an A.C.U. trial if someone did not grumble, but it was distinctly noticeable that there was less grumbling last Sunday than prior to any previous English Six Days. Certainly the riders had little to grumble about, for there is every possible con-

venience at Brooklands for the business at hand. They were not asked to go to the railway yard to be weighed, the Brooklands weighbridge is right on the spot, a restaurant is adjacent, there is shelter from sun or rain, and there are no suspicious policemen and curious small boys to interfere with the proceedings.

Bert Kershaw arrived astride an 8 h.p. New Imperial, with his competition light-

weight fixed on a special sidecar chassis.

The methods of sealing were by no means uniform. Some Sturmey-Archer gear boxes merely had a wire around the body of the box, and the entire unit could have been dismantled quite easily. On other gear boxes of the same type the wire was over the kick-starter mechanism cover. We also observed several cylinders which could have been removed.

THE BRAKE TEST.

I T was about 8.15 a.m. when the first competitor presented himself at the top of the test hill for the purpose of the brake test. This was actually the beginning of the trial, and, after leaving the mark, no work was permitted on the machine. The procedure was as follows:

First, the competitor was told to descend with his brakes off, and, on receiving the word from an official, applied his rear brakes, and then released them, applying the front or other brake on reaching the second official. A third official also took note if the competitor had both brakes on at once.

Oates (2½ Edmund) broke his rear brake wire during the test. Exceptionally good performances were put up by J. Lidstone (2½ James), E. Munday (2½ New Hudson),

In case of rain. Waterproof roller route card on the top tube of R. C. Winn's Douglas.

Moore (3½ Scott), W. F. Scott (3½ Scott), and A. Rollason (4½ Ariel). Twenty-two motor bicycles behaved extremely well.

Of the sidecar machines, nearly all locked their rear wheels, and the outfits travelled on, and their front or "other" brakes were mostly poor.

Exceptionally good performances were made by H. Boynton (7 James sc.), L. Peatty (2½ Hawker sc.), G. E. Stobart (7 James sc.), F. O'Brien (7 Matchless sc.), F. Watson (8 G.N.), F. Boddington (10 Morgan), and A. F. Nash (8-10 G.N.).

H. G. Bell and T. W. Buckle, on four-cylinder F.N.'s at Henley, on a section of good main road, so different from the average Six Days' routes.

The A.C.U. Six Days Trials.—

THE FIRST DAY'S RUN.

B RILLIANT sun, blue sky flecked with light clouds, and a cool west wind—what better starting conditions for a Six Days could man desire? Some of the riders opined that the head breeze would spoil their petrol consumption. The men, as usual, were full of chaff and forebodings. Most of the chaff was aimed at the A.C.U. officials for their sagacity in holding the brake test on the first day instead of on the last; but some was reserved for those unfortunates who had been tinkering right up to the fifty-ninth minute of the eleventh hour, and notably for one poor fellow who seized his engine on Saturday, and had since reduced his piston diameter by .001in. with a hand file. Alarmist rumours were current about Lynton Hill, which is said to have been newly stoned from the bottom to the top, including even the narrow footpath on the right, for which all motor cyclists instinctively make.

"Go as You Please."

The roads this morning were practically level, and most of the mileage was over smooth tar, so that even the most infantile small two-stroke could average 30 m.p.h. without flurrying itself. There were no fixed timing stations, and if Mr. Ebblewhite took any "secret" checks, his car was far too ostentatiously posted to catch anybody napping. Neither was there any official lunch; the men got food where they pleased, and the 28th m. timed stop at Chipping Norton was solely arranged to allow for the measuring of fuel replenishments.

Checking the petrol consumption promises to be a cruel business. At Chipping Norton the riders queued up towards two petrol vendors, who were equipped with one large enamel—quart jug apiece. R.A.C. guides cut the seal off the tank stoppers, and presently affixed new seals. The job was wearisome to a degree; and, as no cover was available, it is fortunate that the day was fine. Entering Oxford, a colossal placard wished "Good luck!" on behalf of Morris Garages, Ltd.

No special incidents marked the very easy morning run, except that C. H. Hanwell, who had been working late, went to sleep, and fell off his machine

The first official petrol stop at Chipping Norton. M. C. Breese's 6 h.p. B.S.A. sidecar is in the foreground.

two or three times. The Royal borough of Windsor was traversed *via* side streets.

Monday afternoon's run proved as easy as the morning's, the sixty-five miles containing nothing worth calling a hill, though Read's Ready failed on an easy slope—near Colerne, because his bottom

gear was damaged. The weather continued fine, except for a sharp shower at six o'clock, which nonplussed some of the polish and duster brigade. Many riders suffered from choked jets, ascribable to draining their tanks on Sunday; this washed the dirt on to the tank bottom, and subsequent refilling washed it into the carburettors. Punctures were not infrequent, Bell's F.N. sustaining two in quick succession.

An ingenious method of securing the spare belt on the Hawker two-stroke.

Unforeseen Happenings.

After lunch it transpired that the night stop was the sole timed check of the day, though unofficial times were recorded for the petrol stop at Chipping Norton in case anybody was unduly delayed thereby. Several cases of major trouble were recorded. Creak Davis retired at Oxford through indisposition, the jet of Hanwell's Cedros came unscrewed and drained his tank, compelling him to break the seals and incidentally revealing a flaw in the petrol regulations. The tank of Nicholson's 3½ h.p. Martinsyde ran dry within pushing distance of Bath, where the local club had made excellent hotel and garage arrangements.

Two of the lightweight sidecars (Peaty's 2½ Hawker and Hall's 2½ O.K.) were seen in trouble near Chipping Norton.

The bulk of the men checked in at Bath, with their mounts in showroom condition after the easiest day ever experienced in a big trial.

RETIREMENTS.

- C. Hanwell (2¼ Cedros).
- J. C. Walker (2¾ Edmund).
- N. Hall (2½ O.K. sc.).
- L. Peaty (2¾ Hawker sc.).
- E. H. Gifford (6 Martinsyde sc.).
- R. C. Davis (8 Chater-Lea sc.).

TIME LOST.

- L. H. Wells (2¼ Hawker), 29m.
- H. H. Nicholson (3½ Martinsyde), 18m.
- A. Eekersley (3½ Duzino), 12½m.

Tuesday morning broke fine, the dust being laid by night rain.

THE HOUR RECORD.

AMONGST records, the 500 c.c. (Class C) figures for the hour are in the classic category, and they have almost invariably been held by riders of single-cylinder machines; only one rider in the history of motor cycle records, J. L. Emerson, has held the coveted title for a 500 c.c. twin-cylinder machine. As recorded on another page, he has set up new figures on a 3½ h.p. Douglas, and previously he gained a similar distinction for another flat twin mount.

NEXT YEAR'S T.T.

A LETTER from Mr. H. O. Wood, of the Scott Motor Cycle Co., Ltd., asks that as a result of reading in *The Motor Cycle* the full details of the proposed T.T. course in Belgium, his previously expressed views on the suitability of the change should be withdrawn so far as they regard the nature of the usual type of course used in Continental races. He considers from the description that the course will be as satisfactory as the Manx one.

NEW O.H.V. ROVER.

AT Saturday's Brooklands meeting Collard was mounted on a new overhead valve Rover. The valves, which are situated fore and aft, are inclined, and have simple rocker gear.

ANGLO-DUTCH TRIAL.

THE British team in the Anglo-Dutch Trial, to be held on Monday, September 26th, is almost complete; applications from private owners of 350 c.c. machines may still be considered.

CLUB NEWS. (Continued from page 262.)

Dublin and District M.C.C.

This year a new route was selected for the annual twenty-four hours trial, which took place on Friday and Saturday, the customary journey to Donegal and back being impossible owing to so many of the roads in Co. Tyrone being trenched. Consequently, instead of Glengesh being the crucial point of the trial, the series of hills between Ballyvoy and Cushendun, near Fair Head in Co. Antrim, so well known in connection with the End-to-end trials, was the test piece of the day's run. Twenty-two riders took part.

Throughout the night and day rain fell persistently, and the test section near Fair Head was in the worst possible condition. Only nine made clean ascents, and of these the star performance was that of Dene Allen's Norton sidecar, which was the only passenger machine to make a clean ascent. Unfortunately, Allen had already gone astray, and lost marks. No lightweight made a clean ascent. All the survivors did well in the Co. Down non-stop section. Fifteen finished.

The trial was generally regarded as the severest of the year, not more than five gold medals being likely to be awarded. Likely winners of these are: Woods and Hurse on B.S.A.'s, Carton and O'Connor on Nortons, and McAllister on a Triumph. The sidecar prize will

probably go to Doyle (8 New Imperial sc.), who was the only sidecarist in addition to Allen to finish.

Week-end Club Events.

- Sept. 1.—Cambridge and County M.C. Hill-climb.
- Sept. 1.—Doncaster and District M.C.C. Paper-chase.
- Sept. 2.—Truro and District M.C. and L.C.C. Hill-climb at Porthtowan.
- Sept. 3.—Skipton and District M.C. and L.C.C. Inter-team Trial.
- Sept. 3.—Coventry Triangle M.C. Week-end Run to Dredgate and Matlock.
- Sept. 3.—North Wales M.C.C. Fault Finding Competition.
- Sept. 3.—Coventry and Warwickshire M.C. Social Run.
- Sept. 3.—Glasgow M.C.C. 100 Miles Non-stop Trial.
- Sept. 4.—Taunton and District M.C. and L.C.C. Picnic at Killoe.
- Sept. 4.—Barrow and District M.C. Club Run and Speed Judging Contest.
- Sept. 4.—Leeds M.U. Club Run to Birstwith.
- Sept. 4.—Canterbury and District M.C.C. Speed Trials.
- Sept. 4.—Burton and District M.C.C. Club Run to Breddon-on-the-Hill.
- Sept. 4.—Sheffield M.C.C. Inter-club Meet at Matlock.
- Sept. 4.—Exeter M.C. and J.C.C. Club Run to Seaton.
- Sept. 4.—Eastbourne and District M.C.C. Picnic at Lamberhurst.
- Sept. 4.—Halifax and District M.C.C. Club Run to Workshop.
- Sept. 4.—Wakefield and District M.C.C. Club Run to Brimham Rocks.
- Sept. 4.—Plymouth and District M.C. and L.C.C. Reliability Trial.
- Sept. 4.—Woolwich, Plumstead, and District M.C. Club Run to Eastbourne.
- Sept. 4.—Central London M.C.C. Social Run to Caesar's Camp.

Eastern Centre A.C.U.

The prize for the best club attendance at the rally on the 21st ult. was won by the Ipswich Club.

Central Cornwall M.C.C.

Perhaps the most exciting event at the annual gymkhana on Wednesday of last week was the "long jump," the three winning machines clearing 32ft. 3in., 27ft. 10in., and 24ft. 6in. respectively. A Triumph made the 32ft. jump.

East Midland Centre A.C.U.

The winner of the skilful driving contest for sidecars at the Stanford Park gymkhana, reported in our last issue, was A. G. Fenn (5-6 Raleigh sc.), not W. Bent, as announced.

Birmingham M.C.C.

There was a big muster of competitors and spectators (nearly 800) at the second annual charity gymkhana which was held at Castle Bromwich on Saturday. Numerous prizes, all useful, were awarded.

Many novel events caused considerable amusement and excitement; and, as all the expenses were borne by the club, local charities should benefit from the undoubted success of the venture.

On the week-end, September 10-11th, a closed trial will be held, the route being to Chepstow and back. Entries close on Saturday next.

HILL-CLIMBING UNDER IDEAL CONDITIONS.

Midland Centre Event on a Hill with a Perfect Surface.

IF in many districts the war left a legacy of battered road surfaces for the everyday rider, the club speedmen may rejoice in some of the perfect stretches of ideal tarred roadway to be found in certain derelict military camps.

The East Midland Centre "discovered" a splendid speed kilometre, on which over 90 m.p.h. has been achieved, at Clipstone Camp, near Mansfield; while the Midland Centre has made a speciality, a climb of gentle curve and gentle gradient, at Penkridge Camp. It lies in the heart of Cannock Chase, and the summit commands some glorious views.

On Saturday last, when the Wolverhampton and Kidderminster M.C.C.'s held their hill-climb, the weather was not propitious, but, despite a strong wind blowing down the hill, some quite reasonably high speeds were attained. No doubt the proximity of the "Six Days" accounted for the absence of the "big shouts" in the Wolverhampton district, for, with the exception of Bennett (the Grand Prix winner) and Reg. Brown, the first fighters were absent. For once in a while, therefore, the day lacked the inevitable A.J.S.-Sunbeam duel of Davies and Dance.

Few Sidecar Entries.

The sidecar classes were run off first, but the entries were few. In the 500 c.c. class Reg. Brown (3½ Sunbeam sc.) tied with F. J. Adam (3½ Norton sc.) in 54s., but the former polished up his opponent by 2½s. on the re-run. T. C. Greenwood (4 Sunbeam sc.) enjoyed his trip in the "over 500 c.c." sidecar class, having a walk-over, and beat Reg. Brown in the next class for "any capacity."

Next followed the 275 c.c. solo mounts, a mixed field of seven producing an outstanding performer, to wit, A. R. Evans, whose 2½ h.p. J.A.P. covered the uphill kilometre, wind, and all, in 50s. (45 m.p.h.). Immediately following, the 275 to 350 c.c. class demonstrated, if nothing else, the astonishing speed of the little engine which won the previous event; none of the 349 c.c. machines got within 10s. of it.

Amongst the 500 c.c. machines, a Norton rider, A. L. Tompkins, speed-wobbled all the way up the hill in 39½s (57.4 m.p.h.), being just too fast for Bennett (3½ Sunbeam), who took four-fifths of a second longer. Class 7, for solo machines over 500 c.c., provided fastest time of the day, 35s. (62.5 m.p.h.), T. C. Greenwood being the rider, on a 4 h.p. Sunbeam.

A Handicap and a Relay Race.

As an interlude, or comic relief, from the high-speed climbs to which the spectators had got accustomed, a match between two Ner-a-cars took place. The winner's time was 2m. 9s. (17.4 m.p.h.). The last event having satiated the crowd with speed, a handicap based on his previous best performances was run off, and the outstanding riders were most airily penalised, for the nett times of the whole of the mixed field of seventeen how fourteen within four seconds of the winner.

Followed a relay race, in which pairs of riders competed. One man stationed

Changing the wristlet between the tapes in the relay race on Penkridge Bank. A. H. Mee (2½ Diamond-Jap) "handing over" to A. Bennett (3½ Sunbeam).

himself between two tapes halfway up the hill; the other raced from the start, after placing an elastic band on his wrist, pulled up between the tapes, handed over the wristlet, which the second man took over and carried to the summit. Timed from the first man's start to the second man's finish; an interesting event with all the spectators concentrated at the change-over point, and the timekeeper alone at the top in solitary state. Results:

CLASS 1.—SIDE-CARS, UNDER 500 C.C.		Time.
R. Brown (3½ Sunbeam)	51½s.	
F. J. Adam (3½ Norton)	53½s.	
First run a tie in 54s.		
CLASS 2.—SIDE-CARS, OVER 500 C.C.		
T. C. Greenwood (4 Sunbeam), walk over ..	45½s.	
CLASS 3.—SIDE-CARS, ANY CAPACITY.		
T. C. Greenwood (4 Sunbeam)	46½s.	
R. Brown (3½ Sunbeam)	53½s.	
CLASS 4.—SOLO, UNDER 275 C.C.		
A. R. Evans (2½ J.A.P.)	50s.	
C. Hill (2½ Diamond-Jap)	52½s.	
D. Atkin (2½ Hobart-Jap)	53½s.	
CLASS 5.—SOLO, FROM 275 C.C. TO 350 C.C.		
S. T. Abbotts (2½ Blackburne)	61½s.	
J. E. Turton (2½ A.J.S.)	62s.	
C. E. Greenwood (2½ Sunbeam)	65½s.	
CLASS 6.—SOLO, 350 C.C. TO 500 C.C. (OPEN.)		
A. Bennett (3½ Sunbeam)	40s.	
F. J. Adam (3½ Norton)	40½s.	
Reg. Brown (3½ Sunbeam)	41s.	
(CLOSED.)		
A. L. Tompkins (3½ Norton)	39½s.	
R. Eveson (3½ Norton)	40½s.	
Reg. Brown (3½ Sunbeam)	41s.	
CLASS 7.—SOLO, OVER 500 C.C.		
T. C. Greenwood (4 Sunbeam)	36s.	
B. Richardson (4 Sunbeam)	50½s.	
*Fastest time of day.		
CLASS 8.—SOLO, ANY CAPACITY. (OPEN.)		
T. C. Greenwood (4 Sunbeam)	37½s.	
F. J. Adam (3½ Norton)	40½s.	
Reg. Brown (3½ Sunbeam)	42½s.	
(CLOSED.)		
A. L. Tompkins (3½ Norton)	40s.	
R. Eveson (3½ Norton)	41½s.	
Reg. Brown (3½ Sunbeam)	42½s.	
MATCH BETWEEN TWO NER-A-CAR RIDERS.		
W. Rudge (2½ Ner-a-car)	2m. 9s.	
J. T. Ireland (2½ Ner-a-car)	2m. 17½s.	

CLASS 9.—HANDICAP.		
J. G. Nickson (3½ Douglas, handicap 12½s.)	36s.	
F. Ingram (2½ Villiers, 30½s.) ..	36½s.	
G. W. Jones (2½ New Hudson, 36½s.)	37½s.	
R. Eveson (3½ Norton, 13s.) ..	37½s.	
CLASS 10.—RELAY RACE.		
A. R. Evans (3½ Sunbeam) and E. Wheeler (2½ New Imperial) ..	63s.	
A. H. Mee (2½ Diamond) and A. Bennett (3½ Sunbeam) ..	64½s.	
C. E. Greenwood (2½ Sunbeam) and T. C. Greenwood (3½ Sunbeam) ..	66s.	

LONG DISTANCE TRIAL IN CANADA.

THE Toronto M.C.C. recently held its annual endurance run from Toronto to Windsor and return—a distance of 540 miles. Twenty-three started, and thirteen finished. Taking it all the way through, it was a gruelling contest, some bad spots on the roads and the terrific heat making rough going.

The best performance in the run was made by B. Mallory, mounted on a single-cylinder Triumph. He obtained one of the three perfect scores in the professional class (at 24 m.p.h. average).

One untoward incident occurred. George Fox, a solo rider, had something go wrong with one of his controls, a bad toss resulting. George Wood gave him first aid, and saw him safely to the hospital, but in doing so sacrificed his chances in the competition. In the words of our local correspondent: "We are just thinking that this is a darned creditable act after a rider has had two days' fighting to keep his score perfect, when it would be so easy to slip by and pass the buck to the next man."

The results were as follows:

CLASS 1. Solo, Professional (24 m.p.h.).—B. Mallory (4 Triumph). Only finisher in this class.
CLASS 2. Sidecar, Professional (24 m.p.h.).—P. McBride (10 Henderson sc.) and A. Blackall (7-9 Harley-Davidson sc.).
CLASS 3. Solo, Amateur (20 m.p.h.).—1, G. Tackey (7-9 Reading-Standard); 2, W. St. George (4 Triumph); 3, A. Shuttleworth (7-9 Indian).
CLASS 4. Sidecar, Amateur.—1, A. Cartwright (7-9 Harley-Davidson sc.); 2, C. Meade (7-9 Harley-Davidson sc.).

DULL RACING AT BROOKLANDS.

Series of "Walk-overs" at Fifth B.M.C.R.C. Race Meeting.

Harley-Davidson Records.

Two wins apiece fell to G. H. Tucker on a $3\frac{1}{2}$ h.p. Norton (left) and E. H. Gifford (right) on the $3\frac{1}{2}$ h.p. and 6 h.p. Martinsyde.

THE weather, though dull and breezy, kept fine for the B.M.C.R.C. meeting at Brooklands last Saturday.

Racing began punctually at 2 p.m., with the three-lap handicap for motor cycles over 500 c.c. Remington (Blackburne), and Packman (Sunbeam-Jap) got away in good form, but at the end of the first lap Allchin (Harley-Davidson) was leading, with Gifford (Martinsyde) second, and Packman (Sunbeam-Jap) some way behind. The result was an easy win for the Martinsyde at 71.31 m.p.h.

1. E. H. Gifford ($3\frac{1}{2}$ Martinsyde) ...	Start. m. s.
2. C. F. Temple (7-9 Harley-Davidson) ...	1 39
3. G. Packman (8 Sunbeam-Jap) ...	scr.
Also ran: A. G. Miller (7-9 Indian), T. R. Allchin (4 Harley-Davidson), H. R. Harveyson (7-9 Harley-Davidson), H. Le Vack (7-9 Indian), O. M. Baldwin (8 Matchless), and J. E. Harwood (8 Zenith-Jap).	1 6

The second race, like all the others (excepting one sprint), was a three-lap handicap, and was open to machines not exceeding 500 c.c. Both the recent record breakers, Emerson and Halford, were competing in this event, and the former's Douglas went off with a mighty roar. Tucker ($3\frac{1}{2}$ Norton) won easily at 70.99 m.p.h.

1. G. H. Tucker ($3\frac{1}{2}$ Norton) ...	Start. m. s.
2. F. B. Halford ($3\frac{1}{2}$ o.h.v. Triumph) ...	0 57
3. H. Le Vack (7-9 Indian) ...	0 12
Also ran: J. W. Tollady ($3\frac{1}{2}$ Scott Squirrel), J. L. Emerson ($3\frac{1}{2}$ Douglas), V. Horsman ($3\frac{1}{2}$ Norton), Eric Longden ($3\frac{1}{2}$ Coulson-Jap), S. L. Bailey ($3\frac{1}{2}$ Douglas), F. A. Longman ($3\frac{1}{2}$ Ariel), C. Rayersbach ($3\frac{1}{2}$ Norton), A. V. Eckersley ($3\frac{1}{2}$ Duzmo), and F. Boshier-Jones ($3\frac{1}{2}$ Douglas).	0 9

The third race was for lightweights not exceeding 275 c.c., and did not attract many entries. Tollady, this time on a Velocette, was limit man, and the others never got near him.

1. J. W. Tollady ($2\frac{1}{2}$ Velocette) ...	Start. m. s.
2. J. V. Prestwich ($2\frac{1}{2}$ Diamond-Jap) ...	2 3
3. C. Fairweather ($2\frac{1}{2}$ Blackburne) ...	0 21
Also ran: S. M. Greening ($2\frac{1}{2}$ Francis-Barnett-Jap), E. J. Anderson ($2\frac{1}{2}$ New Imperial-Jap), and A. King-Smith ($2\frac{1}{2}$ Morris).	0 51

The fourth race, for motor cycles exceeding 275 c.c. but not exceeding 350 c.c., was hardly more entertaining than its predecessors. It was fairly well supported, but provided no excitement, either as regards speeds or close finishes. Swan ($2\frac{1}{2}$ New Imperial) led until the final lap, when Brockbank passed him, winning at 63.20 m.p.h.

1. H. F. Brockbank ($2\frac{1}{2}$ Brock-Blackburne) ...	Start. m. s.
2. A. A. Swan ($2\frac{1}{2}$ New-Imperial) ...	0 54
3. H. J. Line ($2\frac{1}{2}$ Martin-Jap) ...	2 13
Also ran: E. Remington ($2\frac{1}{2}$ Blackburne), A. G. Miller ($2\frac{1}{2}$ Martin-Jap), A. Watson ($2\frac{1}{2}$ Douglas), K. Don ($2\frac{1}{2}$ Massey-Arran), E. Longden ($2\frac{1}{2}$ Coulson-Jap), S. E. Longman ($2\frac{1}{2}$ Weeler), E. D. Dowell ($2\frac{1}{2}$ Douglas), and C. Fairweather ($2\frac{1}{2}$ Blackburne).	1 18

Sidcar outfits not exceeding 1,000 c.c. and two cycle cars, one four-wheeled and one three-wheeled, competed in the fifth event. Here Tucker again distinguished himself, while the two cycle cars were not placed.

Tucker's win was an easy one, his speed being 59.29 m.p.h.

1. G. H. Tucker ($3\frac{1}{2}$ Norton sc.) ...	Start. m. s.
2. C. F. Temple (7-9 Harley-Davidson sc.) ...	2 6
3. R. C. Charlesworth (6 Zenith sc.) ...	0 6
Also ran: O. de Lissa (8 Motosacoche sc.), W. H. Marchant (8 Zenith sc.), D. R. O'Donovan ($3\frac{1}{2}$ Norton sc.), S. E. Longman (8 Zenith-Jap sc.), H. Le Vack (7-9 Indian sc.), E. Bridgeman (7-9 Indian sc.), S. L. Bailey (6 Douglas sc.), R. Dequin (8 Zenith-M.A.G. sc.), E. Baragwanath (8 Martin-M.A.G. sc.), and E. B. Ware (8 Morgan-Jap).	2 6

The one scratch race, unlimited, was well supported, and all got away well except Le Vack and Harveyson, who both stopped after a few yards. The result was a very easy win for Remington.

1. E. Remington (8 Blackburne) ...	Start. m. s.
2. C. F. Temple (7-9 Harley-Davidson) ...	3 45
3. O. M. Baldwin (8 Matchless-M.A.G.) ...	1 36
Also ran: F. B. Halford ($3\frac{1}{2}$ Triumph), J. Emerson ($3\frac{1}{2}$ Douglas), W. E. Dann (8 Zenith), A. G. Miller (7-9 Indian), E. Longden ($3\frac{1}{2}$ Coulson-Jap), F. J. Boshier-Jones ($3\frac{1}{2}$ Douglas), and F. Roberts ($3\frac{1}{2}$ Coventry Eagle).	scr.

Motor cycles of any capacity, driven by members of the B.M.C.R.C. who had never won a first prize on Brooklands,

competed in the seventh event, which was started twenty minutes late, as the handicaps had to be revised. Swan (New Imperial) led easily in the first two laps. At the end of the third lap he dropped back to sixth place, and Gifford (Martinsyde) was again triumphant, but there was a keen struggle for second place between Brockbank and Packman. Gifford's speed was 72.05 m.p.h.

1. F. H. Gifford (6 Martinsyde) ...	Start. m. s.
2. H. F. Brockbank ($2\frac{1}{2}$ Brock-Blackburne) ...	0 43
3. G. Packman (8 Sunbeam-Jap) ...	1 9
Also ran: H. J. Line ($2\frac{1}{2}$ Martin), J. P. Riddock ($3\frac{1}{2}$ Blackburne), A. A. Swan ($2\frac{1}{2}$ New Imperial), A. G. Miller (7-9 Indian), R. E. Dicker ($3\frac{1}{2}$ Norton), C. H. Mocatta ($2\frac{1}{2}$ Coulson), E. J. Anderson ($2\frac{1}{2}$ New Imperial), and J. E. Harwood (8 Zenith).	0 15

Quite a good entry was received for Event 8, open to members of the Public Schools M.C.C. The winner's speed was 50.38 m.p.h.

1. I. Yeowell ($3\frac{1}{2}$ Rudge) ...	Start. m. s.
2. N. A. Lindley ($2\frac{1}{2}$ Omega-Jap) ...	3 51
3. H. B. Browning ($3\frac{1}{2}$ Scott) ...	5 12
Also ran: D. W. Bonham-Carter (3 A.B.C.), C. Keith Robinson (5 A.B.C.), A. G. Miller ($2\frac{1}{2}$ Martin-Jap), C. H. Mocatta ($2\frac{1}{2}$ Coulson-Jap), R. C. Charlesworth (6 Zenith), W. E. Bishop (5 Zenith), and J. T. A. Temple ($3\frac{1}{2}$ Norton).	3 13

The final event was open to members of the North London M.C.C. Greaves, the winner, averaged 53.17 m.p.h.

1. R. W. Greaves (4 Norton sc.) ...	Start. m. s.
2. G. H. Thompson (3 A.B.C.) ...	3 45
3. H. R. Harveyson (7-9 Harley-Davidson) ...	1 36
Also ran: C. Wade (3 A.B.C.), S. M. Greening ($2\frac{1}{2}$ Francis-Barnett), D. Culon (7-9 Indian sc.), and A. H. Harrison ($3\frac{1}{2}$ Scott).	scr.

During the day C. F. Temple, on a 7-9 h.p. Harley-Davidson, beat the Class E (1,000 c.c.) flying five miles solo and sidcar records, at the remarkable speeds of 94.49 m.p.h. and 74.72 m.p.h. His times were:

CLASS E.		Time.
FLYING FIVE MILES (Solo) ..	3m.	10.5s.
FLYING FIVE MILES (Sidcar) ..	4m.	0.9s.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/-, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **ILIFFE & SONS Ltd.,** and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our deposit system. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays mileage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1/0. All deposit matters are dealt with at 19, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally anxious, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the notice as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

READ THIS—

Alcombe's Hotel, Exeter. 13. 8. 21.

Dear Sirs,
Will you please send me to the above address one Englebert 25 x 2½ four ply passenger tyre. I purchased a similar tyre from you on the 17th or 18th June last, which has proved wonderful in every way. I fitted it to the back wheel of my motor bike, and it has run 3,100 miles since then without a puncture.
I have been on some of the worst roads in Southern England, and am immensely pleased with it.
Yours faithfully,
C.C.P.

ENGLEBERT TYRES Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

ACTUALLY AT HALF PRICE.

Size.	Pattern.	Our Price.	List Price.
26 x 2	Touring 3-ply Rubber Studded	23/-	46/-
"	Passenger 4-ply Rubber Studded	26/6	53/-
26 x 2½	Touring 3-ply Rubber Studded	24/6	49/-
"	Passenger 4-ply Rubber Studded	27/9	55/6
28 x 3	Racing, Rubber Bars and Studs	50/6	100/9

Whatever tyre mileage you are satisfied with, these tyres are "good for more."

We guarantee these Covers to give a minimum mileage of 3,000 miles and will replace any proving faulty on this basis. These goods are sent on 7 days' approval against remittance. Carriage paid. For particulars of our "sporting offer," see opposite column.

FREE To all purchasers of goods from this and opposite column, we are prepared to give with every order a pair of our Ustikon Solepieces. Please mention size required for fitting to boots.

OUR RE-CONDITIONED

DOUGLAS
MOTOR CYCLESare reduced to
55 Guineas

In order to clear the remainder of our stock of

50 Machines.

They are the standard W.D. 2½ h.p. 2-speed machines completely rebuilt.

Practically indistinguishable from new. Over 50% new parts, including new tyres, belt, chain, carburetter, etc. Fully guaranteed for 3 months. Over 500 already supplied to all parts of the country

Supplied with bags, tools, and pump, or completely equipped with lamps and horn, 3 Guineas extra.

Deferred Payments Arranged.
Special Terms to Trade.

A FEW EXTRACTS FROM THE MANY GOOD OPINIONS RECEIVED.

"With reference to the renovated Douglas I obtained from you four months ago, I think you will be interested to hear that I have just returned from a tour of some 500 miles, including a return run Birmingham to Ilfracombe. The total mileage covered since the machine has been in my possession now exceeds 4,000 miles, and I have yet to spend money to put right any mechanical trouble. I have used the machine daily, and my weekly average is about 250. I have not yet decarbonized the machine."

G.W.S., Birmingham.

"The machine was run through Hampshire last week and gave the utmost satisfaction, no adjustments of any kind being required, and still running perfectly. It is a credit to your re-assembling."

G.H.T., Borough, S.E.

Later—"The machine is running better than ever."

"The Douglas (2½ h.p.) I got from you is running A1. It has quite come up to my expectations, so I am quite satisfied with it."—F.A.T., Barnsley.

"I was recommended to you by a man who has at different times purchased three re-built machines from you which are still running as new. As these machines are used for hire work (one of which I am using at present) and ridden by various people, I think there can be little doubt that machines supplied by you are reliable."—W.T., Folkestone."

SANDUM

DUAL PURPOSE

SIDECAR

(PATENT.)

Approved by all the leading manufacturers, and suitable for any make of motor cycle. Finished in colours to suit.

A scientific production of a Single or Double Sidecar at will. By moving the seat back to the forward position and opening the back locker-lid a further spring back and spring seat are disclosed, suitable for a six-foot passenger.

The only family sidecar which is at the same time comfortable, elegant, inexpensive, and carries the weight in correct position, i.e., over the rear axle.

Insist that both your passengers shall ride in comfort, and not on make-shift dickey seats. A six-foot man can occupy either seat.

42 Guineas (complete),
TO FIT ANY MOTOR CYCLE.
Body only, 21 Guineas.

When ordering your Sidecar specify
SANDUM Patent SCREEN
for comfort, protection against rain,
and simplicity of movement.

Ask for our Catalogue, which gives a complete range of **SIDECARS**, and prices, from
£16-16-0 upwards

"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate. Complete Outfit, List No. 30/1, Price £5 5 0 (If tail lamp is not required, deduct 12/6).

"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity 6 volt, 40 amp.) is especially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. All our Accumulators are specially made to stand vibration. Ordinary accumulators are never satisfactory for motor cycle work. The hard wood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc. Complete Outfit, List No. 30/2, £7 1 0.

DYNAMO & SWITCH BOX

ECONOMIC—26x2 1/2 Bates special heavy No. 1, 34/6; No. 2, 36/6; Clincher de luxe heavy, 30/-; Hutchinson Passenger, 32/6; Tourist Trophy, 30/-; all oversize for 2 1/4 in. rims.

ECONOMIC—24x2 1/4 (oversize 2 in. rims) Clincher de Luxe heavy, 27/6.

ECONOMIC—Fully guaranteed Dunlop rubber-stud, 24x2 26/3, 24x2 1/4, 26x2 28/9, 26x2 1/2 30/-.

ECONOMIC Tyre Co., 314, New Cross Rd., S.E. 14. Phone: New Cross 1393. [6075]

TYRES.

28×3 Tubes, brand new Bates and St. Helens, guaranteed perfect, in original boxes; 4/6 each, postage 1/-—Marble Arch Motor Exchange, 135, Edgware Rd., W.2. [4436]

BALE and Co.—Special offer of Wood-Milne covers, new and condition perfect, at prices approximately 50% under list; all goods carriage paid against remittance; money refunded if not satisfied.

BALE and Co.—26×2½ 26/6, extra heavy 32/6; 26×2½ 26/6, extra heavy 33/-; 26×3 (to fit 650×65), 40/-; extra heavy 45/-; 650×65 32/6, 26×3 34/-; extra heavy 42/-; 26×2½ 34/-; extra heavy 36/-.

BALE and Co.—Hutchinson T.T. 26×2½, 35/-; passenger, 36/-; Clincher de luxe, extra heavy, 34/-; Palmer 26×2½ and 2½, 35/-; Avon rubber studded 26×2½×2½, 32/6; Dunlop heavy rubber studded 26×2½×2½, 37/6—12½, High St., Croydon. Phone: 1832. [8380]

BURST Motor Cycle Tyres, chafed beads, remoulded, made perfect, tube vulcanising, butt-ends fitted, retreading; send for list.—Melton Mowbray Rubber Works, Melton Mowbray. [0347]

CENTRAL Garage.—Second-hand covers salvaged from army machines, mostly nearly new, and good for several thousand miles, 12/6 each; immediately returned if dissatisfied; state size and make preferred; carriage 1/-—Below.

CENTRAL Garage.—Special line of genuine Goodrich Safety Tread covers, equal to Dunlop extra heavy, oversize for 26×2½ only, at 30/- each with vulcaniser. Sent on approval against cash.—Below.

CENTRAL Garage, Thornton Heath, Croydon.—Free, with any of our covers, a small compact and efficient vulcanising machine. Not a toy, but a suitable apparatus for repairing small holes in covers and tubes. We guarantee dispatch within an hour of receipt of order, and return cash immediately if goods are returned. Brand new Wood-Milne covers, 26×2½, 26/6, extra heavy 32/6; 26×2½ 27/6, E.H. 33/-; 26×2½×2½ 30/-, E.H. 35/-; 26×2½ 34/-, E.H. 36/-; 26×3×2½ 32/-, E.H. 40/-; 26×3 34/-; E.H. 42/-; 650×65 32/6, E.H. 37/6; 700×80 or 26×3 (to fit 650×65) 40/-, E.H. 45/-; heavy tubes, 6/6; carriage 1/6.—Below.

CENTRAL Garage.—Special line of 28×3 extra heavy Wood-Milne, 30/- each listed at 87/-; tubes, 7/6.—Below.

CENTRAL Garage.—Dunlop covers, all sizes, heavy, extra heavy, and combination steel stud. Seed cutting of lowest advertised, and we will supply, together with free vulcaniser, on approval.—Below.

CENTRAL Garage.—Bates 3-ribbed covers, 34/6; Palmer, 35/-; Hutchinson, Avon, or Macintosh, 34/-; 26×2½ or 2½; all approval against cash; carriage 1/6. Anyone going elsewhere does not know how to buy.—London Rd., Thornton Heath. [5994]

HOMERTON Bargains.—New Avon or Michelin steel-studded covers, W.D., 700×65 35/- each; new Beldam clearance covers, all sizes, 30/- each (except 28×3 and 650×65, 40/- each, 700×80 50/- each).—Homerton Rubber Works, Brooksbys Walk, Homerton, E.9. [0331]

EMANUEL'S have a special line of real live 26×2½ and 2½ rubber-studded second-hand covers, guaranteed sound and never been repaired; inner tubes to match, 20/- the pair; a few other sizes on application.—H. Emanuel, Tyre Factor, 37a, Balls Pond Rd., Dalston, N.1. [0235]

26×2½ New Beaded Covers, 24/-; new best quality tubes, 24×2½, 6/-; 26×2, 6/-; 26×2½, 6/6; 26×2½, 7/6; 26×2½×2½, 8/-; 26×3, 9/-; 700×80, 9/6; 750×75, 10/-; 28×3, 10/6; new rubber belts, 6ft. 2in.×1in., 10/6; 15in. inflators, 2/3; sent approval; carriage paid receipt remittance.—Palmer's Garage, Tooting, S.W. [5854]

TANKS.

COVENTRY Tankers, Ltd., makers to the principal manufacturers; petrol tanks for any style supplied.—Hearshall Works, Coventry. [X6953]

B.B.F. Co., Melbourne Rd., Coventry. Phone: No. 1965. Petrol tanks of any description made and repaired; trade enquiries solicited; work guaranteed. [X6137]

TANKS Re-enamelled to Pattern. High-class work only.—D. Jenkins and Sons, 6, Richard St., Atkinson St. Deansgate Manchester Established 25 years [3601]

TANKS Repaired, re-enamelled, partition leakage, drip feeds, burnt and damaged tanks rebuilt as new, re-enamelling makers' colours and transfers guaranteed.—Park Works, 1a, Paradise Rd., Green Lanes, Highbury, N.5. [5815]

TANKS of every description replaced, repaired, and re-enamelled at own works; all kinds of fittings stocked; quick service and reasonable charges.—Send postage for illustrated price list to A. Green, Water St., Chapel St., Salford, Manchester. Tel.: 2191 Central. [0256]

BELTS.

CENTRAL Garage.—Most of this belting is all the same stuff, although there is little doubt we had the first pick. Brand new Pedley, Dunlop, or Clipper, 6ft. 6in., 3/4in. 12/6, 8ft. 6in. 11s. 18/6, 7/4in. any length, 1/9 per ft.; carriage 9d.; approval.—London Rd., Thornton Heath, Croydon. [6996]

ACCESSORIES

ADAPTERS

To convert bayonet to screw-in bulb.

Single or Double P.o.e. **2/-** each, post free.

SILENCERS FOR HARLEYS.

CARRIAGE **16/6** PAID.

METAL CASED TOOL BAGS.

Leather front. Two clips supplied with each bag.

5/9 each. **10/9** per pair.

CARRIAGE PAID.

We have in stock and can supply Repair Parts for B.S.A. Machines, J.A.P. and VILLIERS Engines, DRUID Spring Forks, BEST and LLOYD Lubricators, BOWDEN Brake Parts, and STURMEY-ARCHER Hub on Countershaft gears. Also spare parts and jets for Amac, Brown & Barlow Binks, and Senspray Carburettors, and Chater-Lea lugs and races, etc. Write us to-day.

BELTS.

LARGE Quantity of New Belts, not clearance: Clipper, 9ft.×1in., 22/- each; 8ft. 6in. ditto, 21/- each; surplus by leading makers, 7/4in., any lengths, 2/1 a foot; special offer at 6ft. 6in. of 7/4in. at 10/- each, 7/4in. ditto, 12/6.—H. Emanuel, Tyre Factor, 37, Belgrave Rd., N.16. Stores: 37a, Balls Pond Rd., Dalston, N.1. Phone: Dalston 3161. [0348]

LIGHT Car and Motor Cycle Engineering Co.—Belts, Belts.—We have a large stock of motor cycle belts, all makes, from 7/4in. to 1in., all serviceable, from 3/6 to 7/-; 3/4in., brand new, in makers' cases, 6ft. 6in., 12/6.—Light Car and Motor Cycle Engineering Co., 26, Tulse Hill, Brixton 4½ min. from Brixton Station (Ride). [7181]

BELTS—Clincher, unused, not W.D., 7/4in., 6ft. 6in., 9/6; 7ft. 6in., 11/11; 8ft., 11/9; 7/4in., 7ft. 6in., 12/9; 8ft., 14/9; 1in., 7ft. 6in., 18/6; 8ft., 18/6; 1 1/4in., 7ft., 18/6; 8ft. 21/-; 8ft. 6in., 23/-; Bates, short lengths, 7/4in., 5ft., 5/-; 5ft. 6in., 5/6; 7/4in., 4ft. 6in., 5/6; 5ft., 6/3; 5ft. 6in., 7/6; 1in., 4ft. 6in., 6/9; 5ft., 7/3; 5ft. 6in., 8/3; leather belts, 7/4in., at 2/6 per ft.; belt fasteners, 9d. and 1/- each. Postage 1/- extra.—Bancroftia Co., 64, Bishopsgate, London. [0617]

PATENTS.

VARIABLE Gear, giving wide variations, simple, efficient, for sale, with sole rights.—Box 6,007, c/o The Motor Cycle. [6619]

PATENT AGENTS.

CONSULTING Patent Agency, 253, Gray's Inn Rd., London.—Aero and aircraft engines. [2416]

PATENTS Advice, handbook free.—King, Registered Patent Agent, 146a, Queen Victoria St., E.C. 35 years' experience. [6129]

W. BRYSON, B.Sc., Assoc. M.Inst.C.E., Chartered Patent Agent, 29, Southampton Buildings, London, W.C.2. Phone: Museum 3651. [1048]

FLETCHER WILSON, of Coventry, Chartered Patent Agent and Registered United States Patent Attorney.—Tel.: Wilpat, Coventry. Phone: 356. [X4194]

SITUATIONS WANTED.

MECHANIC (21) seeks situation in repair shop or garage, use centre lathe.—W.P., 17a, Lytchett Terrace, Richmond. [6283]

COMPETITION Rider, with T.T. experience, desires position with firm, competition department, good references, first-class mechanic.—19, Milton Av., Bath. [7129]

GENTLEMAN, late head test dept., Midland Arm, considerable experience, extending some 10 years, of motor cycle, car, and aero engines, also experienced salesman—demonstrator, desires fresh appointment, any capacity, highest credentials, consider partnership.—Box 6,019, c/o The Motor Cycle. [7149]

WANTED, a chance.—Young motor engineer, Public School, theory and practice, high speed I.C. engines, etc., would appreciate offer from manufacturers or others wanting a live wire worker, careful and accurate mechanic, keen on drawing board stage onwards, will undertake absolutely anything and do his utmost to achieve success, desires to establish the earnestness of his endeavours before accepting remuneration.—A.J., 14, Oak Rd., Withington, Manchester. [7242]

STOLEN.

£7 Reward.—Stolen from Brighton Racecourse, 4/8/21, a 24h.p. Douglas motor cycle, Reg. No. PB 2913, licence No. 816275, Amac carburettor, C.A.V. magneto, tyres Continental, stamped "W.D.", Kloxon horn, no front brake, footrests covered plain brown hickmah. [6328]

THE Above Reward will be paid by Francis Dod and Co., Assessors, 11, Grocers' Hall Court, Poultry, E.C., to the first person or persons giving such information as will lead to the arrest of the thief and recovery of the missing motor cycle or pro rata to the value recovered. [6328]

TUITION.

HOUSE and Estate Agency, Auctioneering, etc.—Train by post for this paying profession. Start a business of your own. Prospective free agricultural Correspondence College (Dept. T.), Ripon. [0389]

CONSULTING ENGINEERS.

EXPERT on Works Efficiency, production, costs, development of inventions and experimental work.—W. H. Sumner, A.M.I.Mech.E., M.I.A.E., 28 and 30, Victoria St., Westminster, S.W.1. Phone: Victoria 7573 and 1702. [9301]

AGENCIES.

THE Mohawk Cycle Co., Ltd., require sole agents for their celebrated motor cycles in districts where they are not already represented.—Write for lists and terms to Mohawk Cycle Co., Ltd., Alexandra Rd., Hornsey, N.8. [2506]

GENTLEMAN with city office, of excellent address, representing one of the best known accessory manufacturers, seeks additional agency, commission basis, unique opportunity for a firm requiring London address with well-known representative of ability.—Box 6,021, c/o The Motor Cycle. [7153]

The Six Days Trials in Retrospect.

IT was generally agreed on Saturday that the 1921 Six Days Trials of the Auto Cycle Union were the easiest yet planned. But for Wednesday's trip over Exmoor, the conditions encountered were less severe than a motor cyclist includes in his holiday tour. Whether the easy nature of the conditions was due to fear of the wrath of the Manufacturers' Union is not too certain, but one is inclined to the thought that the much maligned A.C.U. were over-influenced when selecting the trials route. In years gone by, local motor cyclists in their thousands have gathered on their local test-hills to witness the riders, but this year, having no notable hill to go to, since the organisers in the main avoided side tracks, they had perforce to assemble on corners or main road inclines, and the number of spectators was noticeably less on that account. Has the manufacturers' boycott been properly understood, we wonder? Apart from the question of "silence," one recalls that the chief complaints of the past have not been directed against excessive gradients at all, but to the boulder-strewn tracks which render success so much a matter of luck. Surely more hills with reasonably good surfaces could have been embraced in the West Country—no one would have cavilled at that, and the trial would thus have been more in keeping with the capabilities of the modern motor cycle.

Speed and Consumption Tests.

The most difficult test of all was undoubtedly the twenty-five laps of Brooklands as a wind-up to the road test. Trouble and breakdowns were frequent in this speed burst, some of them admittedly due to the riders setting themselves too hot a pace in order to gain bonus marks. Of the petrol and oil consumption tests during the road stages from Monday to Friday, one can only remark that the results are artificial in the extreme. Every downhill stretch was seized upon by the wily competitors to declutch and freewheel in order to

conserve fuel supplies, and lubricating oil was cut down to vanishing point, which is not good for the engines. A smoky exhaust was a thing unknown—until the riders reached Brooklands! Notwithstanding, the figures recorded for petrol consumption are interesting, but of the lubricating oil consumed, one can only express the opinion that the figures are in some cases unbelievable.

Possibly due to the fact that many representative manufacturers refrained from entering the trial, the percentage of failures is large—too large, indeed, at this stage of progress in motor cycle production. The severity of the trial could in no way account for eleven riders withdrawing before Tuesday evening—on roads absurdly easy, judged from the capabilities of a modern motor cycle; unpreparedness must be the real reason. Tyres caused a goodly number of lost marks, and it is still a fact to be admitted that motor cycles are not so well shod as cars. Of the eighty-nine starters, fifty-four are awarded gold medals, six silver medals, three bronze, and five certificates, one of the survivors being disqualified.

Passenger Machine Successes.

Passenger machines showed up prominently, particularly the powerful variety, and this, notwithstanding an unusual percentage of trouble on the track, due to the high speeds attempted. The three-wheeled runabouts in particular have cause for congratulation, for they mostly performed well throughout, and, more important still, were in first-rate condition when the examination stage arrived. The percentage of passenger machines to gain gold medals is far superior to the solo mounts, being actually twenty-six gold and three silver medals of the thirty-six starters.

Next year, one earnestly hopes that the Manufacturers' Union and the A.C.U. will have settled their differences, and so enable a difficult and useful Six Days event, representative of all manufacturers, to be arranged once more for the general good.

The Note of Hooters.

THE more I see of modern traffic, the more convinced I become that hooters would convey far more safety if their note was higher. In almost every case, whether the hooter be a bulb horn or electric, its note is distinctly bass, and a gruff, raucous growl is about as accurate a description of it as one can get. Such a note travels fairly well when there is no counter-noise. But it is not decently audible above the rumble of a waggon or the burble of an ordinary engine. I have heard it stated that a really deaf man can only hear two sounds—the squeak of a door hinge and the squeak of an ungreased waggon wheel. Be that as it may, I still remember that of all the alarms I have used in over-twenty years of motoring, the exhaust whistle was the most effective. I believe that as our roads get more and more choked with fast traffic, of which a percentage must ever remain rather undisciplined, we shall need hooters of more penetrating power. At any rate, such an innovation might be a useful auxiliary to the removal of road dangers and the instruction of young drivers in “safety first” principles.

Prop Stands.

IF my correspondence affords any index, there will be rows and rows of prop stands at the next Show. The motor cycling world is just tumbling to the folly of needless exertion. To the fact that kerbs are too high, or too low. That many absurd roads have flush edges. That lifting 3 cwt. is no joke. That the proper function of a rear stand is to minister towards tyre repair. That a Rolls-Royce does not have to be laboriously hoisted on to four jacks whenever the crew dismount. That—in short—we have been silly jugginses, and do not intend to remain such any longer. I cannot give free advts. to them all, but a lot of earnest people are sitting up at nights with pencils, and several patterns seem likely to eventuate.

Never Said It.

AN irate reader denounces me soundly for “writing up the babies.” He recommends me to buy a motor bicycle or a box of tin soldiers or wooden bricks. I have never said that a baby was the correct all-purpose mount. If I were limited to a solitary jigger, nothing but grievous impecuniosity would cause me to select a baby. They are not fast enough for one thing. For another thing, they mostly joggle one up too much on genuinely prolonged rides. But I always try to keep one for local pottering, because they are so reliable, so cheap to run, and so easy to handle in a hurry or on a multi-stop sort of jaunt. A baby Cedros has graced my stable for the best part of a year. I am never going to sell it,

and I would not be without it for years. But if it did not generally boast a big stable companion, I might possibly hate it; for after the fashion of all engines with jam jar cylinders, it feels every slope, and its all-out gait is probably rather under forty than over it.

Those Wasted Years.

DO not quiver, prurient reader. You are not going to be treated to a tabloid summary of my lurid past. My cross-heading is inspired by the thought of the vast sums, now, alas, gone beyond recall, which I have expended on hotel bills during a somewhat vagrant existence. I hinted the other week that I have recently purchased one of those portable hotels known as campers' tents. I have just spent a healthful and interesting week with it. Trying moments occurred. The Primus stove carbonised up its jet and perished its pump washer (mere trifles to a veteran motor cyclist). A needlessly blood-thirsty bull broke into my camping ground at 2 a.m. and sniffed horribly at the partly open tent door—the far end of the tent being hermetically sealed by numerous ties and stout pegs. Once I waxed almost poetic in spirit as I gazed out of the door at 5 a.m. towards a sombre sea—and spied an enormous rat combing his whiskers after a hearty meal on my corned beef. There were earwigs. Also wasps. But take my word, it is the life, gentlemen. I am as brown as a berry, and ready to keep my temper whilst I tackle a rained out magneto in the open.

Tent v. Hotel.

I CAMPED last week next door to a well-known schoolmaster, who was in charge of a baker's dozen of young England. Their week's expenses came to a round 30s. less than my hotel bills for the last Six Days Trial which I attended. No, I am quite a sober man. Yes, I may have lots of friends, but I do not spend my evenings in the bar, calling for drinks round. The plain fact is that you can give a dozen lads a jolly good supper and breakfast for less money than the “dinner, bed, and breakfast” charge of a secondary hotel, and you pay no rent, and next to nothing for housing, on the beach or the field. Nor do rates or staff or licence cost you a cent. I look forward to the day when the country will be dotted by the camping enclosures of a great motoring organisation, bossed by the A.C.U. or the A.A. For the main trouble about camping is finding the perfect site in a district which you do not know, and the second problem is getting leave to use it when you have found it. Shelter, good ground, and a plentiful water supply in sight of pleasant scenery are the main requisites of the ideal site; and “dirty campers” have

Occasional Comments.—

enraged so many land holders that even a Mason of marked personal beauty and distinctly engaging manners meets with more refusals than permissions. My last site was freely decorated with open tins full of decomposed salmon and poisoned wasps. So neither my mystic signs, nor my sad, sweet smile, nor my honied words won the landlord. Old campers say the best "Open Sesame" is to take with you a pretty girl, preferably clad in one of those cretonne frocks which begin late and finish early.

Dearer than Arrows!

THE blue powder used by the A.C.U. for marking the route in last week's Six Days is dry paint, and costs between £30 and £40 per ton. Major Dixon-Spain used 5 cwt. (all but 4 lb.) in marking Tuesday's route, so the week's outlay is quite considerable. This year the A.C.U. elected to use a pale shade of blue (mixed ultra-marine and white), which was not particularly effective, for after a few hours' exposure and it is often laid twenty-four hours in advance) it harmonises too closely with blue shadows thrown by trees and with certain tints in the tar. I do not know that I am a very warm advocate of road staining; at dangerous junctions it is rather apt to distract the men's attention from the road.

Potty Hills?

REALLY there is no pleasing some people. Last year the A.C.U. hills were criticised as machine-smashing precipices, and this year, with one or two exceptions, as the sort of grade up which any healthy troop of boy scouts could double with their trek carts. I noticed that each hill, however insignificant, drew its assembly of the local k'nuts, whose rapt earnestness proclaimed that they were interested in the climbing. If this type of rider ventures to visit Porlock or Lynmouth, he talks about it for months, or even years, afterwards. I believe the 1921 trials represent popular hill-climbing standards far more accurately than ever the 1920 event did.

Really, Doctor!

DR. LOW refuses to admit that the A.C.U. officials have ever dared to criticise design. His memory has failed him, for—to quote one famous occasion only—they came near advising the trade to scrap air-cooling in favour of water-cooling; and I believe Dr. Low was a judge in the trial under notice. I quite admit that the water-cooled Scott put up such a fine show in the event as to justify public attention being directed to its cooling. But the judges' report of that year went a great deal further than the mere record of observed facts.

IN A SOMERSET PLAYGROUND.

F. J. Ellis and F. O'Brien piloting their Matchless sidcar outfits through Cheddar Gorge during the Six Days Trials. This famous beauty spot is one of the most popular resorts in the West Country.

PASSENGER MACHINE TOPICS.

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Collated by "Vedette."

IT is not often that a severe frame breakage can be so securely repaired on the road that a further sixty mile journey may be accomplished without mishap.

An ingenious repair to a broken rear fork on a Morgan.

Yet this was done by Mr. W. H. Trigg, of Newbridge, Monmouthshire, and, what makes the feat even more commendable, to the rear stay of a Morgan, which takes a considerably greater strain than the corresponding member on a sidecar outfit. The accompanying illustration show how the repair was effected with the aid of a spanner from the toolkit.

◀ ▶ ▶ ▶ ▶

THE battle against the elements, so far as the sidecarist is concerned, has resulted in many ingenious devices for the protection of the rider and passenger. A novel disappearing hood, the product of Mr. A. C. Goad, 13-24, Avenue Close, Poplars Avenue, Willesden Green, London, N.W., is shown in the accompanying illustrations of a new sidecar by this designer. So far as the hood is concerned, it cannot fail to provide complete protection for the passenger, since the sides and top are as one piece, whilst the front aperture is covered, first by the windscreen, and above that by a metal flap. Mica side windows are provided, and the whole slips com-

fortably away into the rear of the body when the retaining clips are released. Mr. Goad hinges the bulbous back of his sidecar at the top, whilst the

A sidecar body costing £601

A special production of beaten aluminium.

lower end, when drawn out, unfolds a metal luggage grid. This is supported by two metal strips fixed to the body and to the centre hinge of the grid. To render this large compartment absolutely rain-proof, not only is the underside of the grid covered with waterproof material, but canvas side pieces are fixed in position by metal clips. This construction, although ingenious, is not altogether suitable for the loading of large articles, such as suit cases, etc.

◀ ▶ ▶ ▶ ▶

A new sidecar design, the hood of which folds completely out of sight. The inset on right depicts the ingeniously conceived luggage grid.

A SIDECAR body for £60 represents more than the majority of us would care to pay. Yet that figure is the estimated cost of a body similar to the one illustrated, which was made specially by Messrs. Wolf and Pitney, of 48-50, Mersey Street, Notting Hill, London. It is constructed throughout of sixteen-gauge

Passenger Machine
Topics.—

aluminium, and, although fitted to a standard Enfield chassis, is wide enough to seat two passengers of medium size side-by-side. As might be imagined, it has ample locker accommodation.

THE owner of the very much family sidecar illustrated on this page (Mr. W. L. Driver) acknowledges that his loaded outfit provokes considerable comment wherever he goes. I am not surprised! The illustration shows nine up (I have had them counted carefully), but his more normal complement of passengers consists of only eight—four adults and four children. Until some other reader caps this feat, I have no hesitation in answering in the affirmative Mr. Driver's query as to whether he has broken records. The long-suffering machine is a 5-6 h.p. W.D. Enfield, the sidecar body of which has been largely constructed by its present owner.

Eight or nine passengers is a normal load for this 5-6 h.p. Enfield outfit of Mr. W. L. Driver.

tight joint, and is self-supporting in the "open" position without the use of hinged stretchers. Adjustable side wings are fitted to the screen. The canopy is a complete shell enclosing the back of the body, and is hinged level with the front of the seat; brought up into position it meets the top of the screen and edges of the screen side wings. Ventilation is afforded either by opening the latter or by means of a hinged cover controlling a gauze-protected slot above the top of the screen. The whole idea is simple, practical, and, as the pictures show, invisible in the "out-of-use" position; moreover it may be applied to runabouts or two-seater cars, and there does not appear to be any objection to the scheme.

THE fitting of a completely enclosed sidecar body in many cases is undesirable, since, providing an efficient windscreen is fitted, the passenger does not wish to ride "in a box," except when the weather is absolutely impossible. Hoods of the Cape cart variety, although they give protection from wet, do not keep out wind to any great extent. If the permanent canopy is neat in appearance, the Cape hood is the reverse, especially throughout the greater part of its life, i.e., when out of action.

Two thoughtful motor cyclists, Messrs. Brookes and Harris, of 126, Merridale Road, Penn Road, Wolverhampton, have devised and patented a really weatherproof sidecar

A coupé top which disappears as required. It encloses the back panels of the sidecar body when out of use, swinging up from hinges level with the door. The illustration shows the complete protection afforded, and (inset) its invisibility and neatness when down

body on neat and simple lines, giving all the advantage of the permanent coupé top, and having more than the convenience of the folding hood.

The best feature of the arrangement is its delightful simplicity; briefly, with the canopy down, the body appears to be quite normal, except for the broad polished beading round the sides and back of the seat; the wind-screen is carried on a hinged dash, which has a water-

HOW long do belts wear on large sidecar outfits with a chain-cum-belt transmission? This question has often been put to a member of *The Motor Cycle* staff who runs an 8 h.p. Rex-Blackburne outfit. At the time of writing this machine has over 10,000 miles to its credit, and the Dunlop rin. belt is apparently as good as new. Obviously the coating of rubber on the sides is not so thick as originally, but otherwise there are no signs of wear. The pulley centres are rather wide, so that the belt may be run fairly slack.

COMPETITORS IN TOURISTS' HAUNTS.

(Top) A trio of Martinsyde sidecars descending the Cheddar Gorge. (Circle) Big "singles": P. Pehrson, $4\frac{1}{2}$ h.p. two-stroke Dunelt, and N. Clayton Russell, 4 h.p. Norton sidecar. (Bottom) A part of the route lay through the beautiful valley of the Thames. E. Williams and C. Williams, both on $2\frac{1}{2}$ h.p. A.J.S. machines.

PORLOCK IMPRESSIONS.

G. Featherstonhaugh (3½ Rover) on one of the steep portions of this famous hill, showing the sea shore in the distance. (Circle) J. Ford (7 F.N.) and J. Wallace (3½ Duzmo) appear none too happy on the bend, but both made a clean ascent. (Bottom) G. Strange (3½ James) and H. H. Nicholson (3½ Martinsyde) going well.

THE T.T. IN BELGIUM.

Pleas for the Race in Britain.

STILL more opinions flow in on the change of the venue from the Isle of Man to Belgium for the 1922 Tourist Trophy Races.

One remarkable feature is that the A.C.U. has mentioned that a reason for the change is that the dates, which were put forward to the Isle of Man Highways Authority were refused on the grounds that the R.A.C. had already applied for and received permission to hold car races during the same period.

The R.A.C. is the parent body of the A.C.U., and, although the two are supposed to work in conjunction, it would seem that they are very much in the dark as to each other's actions; the above mentioned "explanation" of one of the reasons for the change certainly betrays a lamentable lack of internal organisation on the part of the ruling organisations; it is to be hoped that this sort of thing does not occur on other occasions when the R.A.C. and A.C.U. committees have mutually affected interests.

Letters from individual readers are given below; these, however, are prefaced by an informative communication from a gentleman well-fitted to speak on the holding of the races in Belgium, representing, as he does, the interests in this country of the most prominent Belgian motor cycle factory.

It will be noticed that the holding of a race in this country is still advocated, and truly, however impossible it may be, we must confess much sympathy with those whose desire would lead to the embarking upon what appears to be a forlorn hope. A strong and united ruling body, after selecting a suitable course in England, *might* illuminate the governmental mind with a sufficient idea of the value of a special Act permitting a race of such important value to international trade development, but the idea is far from hopeful.

Some Advantages of the Change.

Sir,—I have been much interested in reading the expression of some of your readers' opinions on the subject of the change of venue of the Tourist Trophy races for 1922. It is quite natural that a considerable number of the opinions expressed are not favourable to the new proposal. Where vested interests are involved, unbiased judgment can scarcely be expected.

Personally, I am exceedingly pleased to see that the A.C.U. have broken away from the Isle of Man tradition, feeling, as I do, that an unbroken sequence of trials over precisely the same course is bound to stereotype motor cycle design in one direction only. That the invitation of the Belgian authorities should have been accepted by the A.C.U. is, of course, gratifying to me, because of my association with the most prominent firm of Belgian motor cycle manufacturers. Nevertheless, I should equally have welcomed the change had the trials been held in France, in Ireland, or in England.

The arguments adduced against the change of ground would seem to run in three general categories:

1. Doubt as to the adequate severity of the course to produce a first-class test.

2. The extra cost and worry to manufacturer and spectator alike involved in holding the race in a foreign country.

3. The undesirability of spending money abroad at this juncture.

May I be permitted to deal briefly with these points:

1. From personal knowledge of the district, which is probably greater than that of the majority of your correspondents, I would say that the course does possess bad corners, long climbs, dangerous descents, awkward hairpins, and good speed stretches, sufficiently calculated to gruel a machine to an even greater extent than the Isle of Man course, and, in particular, possesses a new set of conditions which may prove a handicap to those who have, as a result of many years' racing on the Isle of Man course, produced machines suitable for that course only, and trained riders to obtain the last ounce out of them only on that course. It is evident that there are vested interests here, which naturally will hardly extend a welcome to a proposal which puts one and all on an equal competitive footing.

2. On the question of the extra worry and cost involved, passports and Customs formalities are slight; and, without doubt, special arrangements will be made by the A.C.U. and the Belgian Government, which will render trouble in this direction practically nil. The actual transport of machines and material between England and Belgium is, from my own experience, a far simpler matter than transport of machines and material to the Isle of Man. In contradistinction to the manners of the shipping company, the authorities, and the people of the Island generally, the Belgian people are courteous, helpful, enthusiastic, and good sportsmen; and from my intimate knowledge of conditions in the district where the race is to take place, I can assert that both competitors and spectators alike will be surprised at the desire to be of service and the warmth of the welcome which will be accorded to them.

3. The third aspect would appear to be a jealous fear lest English money should be spent abroad. In this regard, I note from a recent clipping anent the T.T. races, that the *Isle of Man Times* estimates that the T.T. races bring a sum of £50,000 into the Island. When one considers the millions which are spent each year by British tourists abroad, the figure of £50,000 is so infinitesimal that it seems to be straining at a gnat and swallowing a camel to worry about it; but, granting that the small and petty view be taken, to my mind, British motor cycle manufacturers, and the motor cycle movement generally, will receive a very great deal more than £50,000 worth of international advertisement from the fact that the races are held in a country to which the greater number of European nationalities have easy access.

If the British motor cycle industry is to continue to exist, it must very seriously cultivate the export trade, and there is no more potential field for this than the Continent. At the present moment this market is inclining to the American mount.

I have dealt very briefly with the three main points set out above, as space conditions do not permit of my doing so *in extenso*.

In my opinion, there are excellent reasons, quite apart from those of a technical nature, affecting design. In the past, and particularly last year, competitors and visitors alike suffered from the lack of shipping facilities and the general absence of helpfulness on the part of the shipping company. The petty restrictions and taxation imposed by the Isle of Man authorities were of a very annoying pin-pricking character, and, in the opinion of the majority of people, absolutely unnecessary; certainly ill-advised.

By granting permission to the R.A.C. for car races to be held in June, 1922, the month usually reserved for the T.T. races, the Isle of Man authorities have clearly shown how little value they set on the holding of the A.C.U. T.T. races in the Island; or, on the other hand, they clearly

The T.T. in Belgium.—

indicate by such an action they consider that conditions have granted them a monopoly of the T.T. races on their own terms.

Further, the Isle of Man is exceedingly inaccessible for Continental manufacturers or visitors, or even for visitors from the South of England, and this plays quite an appreciable part in nullifying the international character of the races.

When in the Island last year I heard complaints on all sides as to the profiteering character of charges; it seemed as though the Islanders desired to squeeze everything possible from their visitors.

I am of opinion that in arranging for an entirely new course the A.C.U. has done the only thing which is likely to bring the Islanders to their senses.

A. ERNEST GELDER,
Managing Director, F.N. (England), Ltd.

A Motor Cyclist's Views.

Sir,—As an interested, but non-competitive, member of the racing side of the motor cycle movement, will you allow me to record my protest to the A.C.U.'s somewhat startling proposal to change the T.T. course? It seems to me that this has been done entirely without consulting those primarily responsible for the success of the race, namely, the manufacturers and the riders themselves. This the A.C.U. apparently has left for *The Motor Cycle* to find out.

I am very glad to see so many T.T. riders protesting; it shows a true sportsmanlike spirit to raise objections to a course which they know to be considerably easier than that in the I.O.M. Surely if the race is held under comparatively ideal conditions, it ceases to be a tourist machine race, and becomes merely a test of speed and of good driving and judgment. Such items as acceleration, brakes, gears, transmission, and frames would receive no greater test than may be obtained any day on a Brooklands "blind."

Has the A.C.U. considered the greater majority of motor cyclists, whom it is supposed to represent, who cross over to the Island each year to watch the progress of their pet machines? I fancy they would think twice before going to watch a dissimilar race in a foreign country. Surely a crowded paddock and grandstand consisting of British motor cycle enthusiasts must be no mean advertisement; and do not the manufacturers spend thousands in experimental and research work solely to bring out a machine that will acquire itself admirably under most trying conditions almost entirely with a view to advertisement? But would spectators flock into Belgium in the way in which they flock to the Island? No, I venture to think not, for they would reason that they could see the same type of race at Brooklands for far less money.

We shall probably find that the majority of manufacturers of 3½ h.p. machines will be keener on the change than those of the lightweight, as they will likely be prejudiced by a feeling of jealousy towards the magnificent little 2½ h.p. machine that won both events this year. F. E. POWELL.

Why Not in England?

Sir,—The T.T. Races strive to bring out all that is best in a machine and to show up the weak points. What the motor cycling public requires is a light machine, in which is incorporated an engine that will stand up to prolonged speed work coupled with violent acceleration and efficient braking. Nothing can develop this machine better than the I.O.M. course, and if manufacturers have come to the conclusion that their machines are too fast for the course they must look to their acceleration powers and brakes.

If there is a really good reason for changing the course, such as all the formalities which have to be gone through by motor cyclists visiting the island and the landing arrangements for machines, let a course be found in the British Isles. When a suitable course is found, then the A.C.U. will have to get the old law about road racing in this country abolished. After all, we are the only nation which does not hold its chief motoring event of the year in its own country.

France holds the Grand Prix in France, America the Indianapolis in the States, and so on. Why should we not hold our T.T. in our own country?

Birmingham.

PATRIOT.

Sir,—As "one of the crowd" I would like to register my protest against the proposed change of venue of the T.T. Races. I base my protest on the same facts that prompt certain people to advocate the proposed change. I have not been on either course personally, but have studied the description of them. The I.O.M. course, it is said, does not give the 500 c.c. a chance to show its speed; but I ask you how many people realise the terrific average speed attained on the present course?

I ride a 2½ h.p. Douglas and can say that few machines can pass me if I like to let out—yet the Douglas did not win this year's T.T. So why take all that money abroad (money which eventually must come out of the motor cyclist's pocket) merely on the pretence of giving the 500 c.c. a chance to do its 60+ m.p.h., a speed which I would suggest only a potential criminal attempts on the high road.

Brooklands is surely the place for pure speed tests. The course we want is one that will give us good brakes and easier control.

J. HEASMAN.

A Trip to Belgium Anticipated.

Sir,—Generally, I am pleased. I visited the Island this year, and was only pleased with the practising and the actual races. I was very impressed by the treatment given to us as a class—treatment not only undiplomatic, but, at times, almost insulting. My motor cycle friend and I most heartily agreed to see the French Grand Prix next year on this account; but now we shall go to Spa (since our holiday must include "motor cycles") to see our own T.T. (if we save enough). There are three main points for consideration.

FACILITIES.—The journey to Spa will be quite as easy as that to the Isle of Man, and much more pleasant; and riders' and spectators' machines will be handled as machines should be. As a holiday, Spa will be different—a change. There will be, I feel assured, enough Englishmen who can and delightedly will help the non-linguist. (By-the-by, shall we want German, Flemish, or French?) If the holiday proves any dearer than in the Isle of Man, the experience of new countries will be well worth the few extra pence. (Any of your readers been to Belgium? But it is different now, and besides you did not all get to Spa.)

ECONOMICS.—I quite realise the money loss—in hard cash. The English public will not see the use of the T.T. at all. The Isle of Man indigence do not "behave," so it is the United Kingdom's own funeral. But then, the increased market for British machines will quite outweigh the hard cash lost.

DEVELOPMENT.—Granted the Isle of Man course ideal for testing capacities of engines 250-350 c.c., but the 500 c.c. does not get a chance. The best trial of all is a combination of Isle of Man T.T., Brooklands 500 miles, French T.T., and Belgian T.T. Then we do know what's what among the placed machines.

No one will expect Scott to like it, because Scotts love corners; or the A.J.S. to like it, because they are the Isle of Man experts, etc. Mr. Wells thinks that we shall be welcomed with "open arms." I believe him, and it will be a pleasant change from annoyances and fleecings. I am sorry for the blow it will prove to Manxman enthusiasts; but I am happy to think the race will be international, in which English machines will undoubtedly shine.

P. AND M.

Walsall.

Scotland Seriously Suggested.

Sir,—I must confess to surprise on learning that the T.T. was to be transplanted to Belgium. Doubtless the A.C.U. has the very best of reasons for seeking pastures new, but "charity begins at home," and, if the Isle of Man is to be deserted, every available channel should be investigated before this national event is taken to the Continent.

An ideal T.T. course could be found in Lanarkshire, midway between Edinburgh and Glasgow, and were the authorities concerned approached judiciously it is possible that permission might be obtained.

The T.T. brings in its train an expenditure of tens and perhaps even hundreds of thousands of pounds, and this is not the time to even hint at such a sum of money being taken out of the country. In Scotland we have the ground and a sufficiently central location. All that is required is permission, and I would seriously suggest that every effort be made to obtain the last named.

CAMPBELL MCGREGOR,

Secretary, Edinburgh and District Motor Club, Ltd.

A 500 c.c. V TWIN SOLO MOUNT.

The 3½ h.p. Martinsyde Sports Model—a Machine for High-speed Touring or Competition Work.

THE first appearance of the 3½ h.p. twin Martinsyde was at the end of last year when it was shown at the Olympia Show by Martinsyde, Ltd., of Maybury Hill, Woking; the machine has undergone considerable alteration and improvement since that date, and it re-appeared in an improved form when it competed in the 500 miles race in the able hands of H. H. Bowen. Three of these machines have also been through the Six Days Trials—their first appearance in a long reliability trial.

Some Distinctive Features.

The chief alteration lies in the shape of the frame, which is of symmetrical appearance with a sloping top tube, which latter is brought into line with the back forks. The main Martinsyde features are retained, such as additional stays between the top of the saddle tube and the bottom bracket supporting the gear box; while the engine, which has a bore and stroke of 60×88 mm. respectively (498 c.c.), is a small replica of the larger type utilised in the Martinsyde sidecar outfit, and possesses the well-known features of the

The 3½ h.p. Sports Martinsyde. The performance of this new model in the A.C.U. Six Days Trials was watched with interest.

The front chain is protected by means of a chain cover, in the centre of which is a screw cap, which, when removed, allows access to the clutch spring, so that the latter may be easily adjusted. A light guard protects the top run of the rear chain. Footrests are fitted instead of footboards, and, in connection with this fact, it is worthy of note that the pedal actuating the rear brake lies midway between the front and rear offside footrests, so that it may equally well be applied by the toe when the foot is on the rear footrest as by the heel when the foot is on the front footrest.

Clip-on Magneto Shield.

Points of convenience have been carefully studied in this machine, and it is interesting to remark that the magneto is protected by a shield kept in position by a light spring, so that it can be swung forward at any time in order that the magneto may be inspected. The three-speed A.J.S. type gear box, though it incorporates a clutch, is not provided with a kick-starter. Particular note should be made of the large toolbags, which extend the whole length of the carrier, and are adequately protected by a metal casing. The oval section tank is secured by straps

fastened on to lugs on the secondary tube, and holds one and a half gallons of petrol and three pints of oil.

The top gear is 4½ to 1, and the equipment includes two-lever Amac carburetter, Dunlop 650×65 mm. tyres, and Brooks saddle. The weight is given as under 300 lb.

Chain cover of the 3½ h.p. Sports Martinsyde, showing the inspection cap by means of which the clutch spring adjuster is reached.

overhead exhaust valves, made of stainless steel, with inlet valves below them; Best and Lloyd semi-automatic lubricator, ball bearing crank and camshafts, while roller bearings are still retained for the big ends.

A hinged magneto shield is fitted. Note the spring impinging against the exterior of the magnets holding the cover in place.

The illustration, which depicts a recent meet of the Okehampton M.C.C., denotes that the enthusiasm of the club members has not slackened as the season has progressed—not an unknown happening in some clubs.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

WHICH IS THE MOST SILENT MACHINE?

Sir,—I see in your correspondence columns of the 25th ult., "P. and M." states that, in his opinion, as to which is the most silent machine, "the P. and M. fitted with a 1919 pattern silencer would take some beating." Certainly the P. and M. is more silent than the average machine as regards the exhaust, but get it pulling nicely on an incline and the chatter from the valves and timing gear is really loud. I have owned a 1919 P. and M., and ridden it under all conditions, and the only thing that I did not like was the chatter. At present I own a 1921 semi-sports Sunbeam, and certainly this machine does take some beating as regards silence and everything else. There is no valve chatter, and spring tappets are fitted; and the exhaust fitted with a standard silencer creates at all speeds little more than a deep throb.

SUNBEAM.

Harrogate.

Sir,—With reference to the recent letters on silence, long exhaust pipes, etc., by "Fed Up" and others, I notice that the element of "driving" does not appear to figure in their arguments at all. As "Ixion" remarks, it is possible to cause a hot stuff "single" to "purr like a sucking dove." I have seen 3½ h.p. Nortons (even sans mufflers) driven with the slight swish of the countershaft chain audible above the exhaust note. The quietest Triumph I know in this town has a direct exhaust pipe, but these machines have been in the hands of men who are motor cyclists in the full sense of the word.

If, therefore, a Norton (or similar machine) owner tries a few accelerating tricks through a town or under the nose of a "man in blue," he deserves all he gets.

There are many so-called motor cyclists in this district, for instance, who fit gorgeous drain-pipes to their machines, but only seem to recognise two positions of the throttle, i.e., fully open and shut. One for instance (a Douglas owner) has fitted a beautiful pair of copper exhaust pipes. Very smart!

But he is not smart enough to get his front cylinder to fire evenly at much under 30 m.p.h., and I strongly suspect that he rides with his ignition at full retard.

We have a most sporting body of police here; but now that two-strokers are fitting direct exhausts, we must not be surprised if, at some future date, it becomes necessary for tourists to avoid this district in order to escape police "silencer" persecution.

They will know whom to thank!
Doncaster.

W.R.

Sir,—I possess a 1919 Levis (all chain drive), and until quite recently I have had a great deal of trouble with the police in the district, mainly through inefficient silencing. Having just about got fed up with this annoyance, I made up my mind to fit something to my "bus" so that it would run much better.

After much trouble, I fitted a long copper tube from the silencer, right up to the extreme end of the back wheel stand, made a fish-tail end, and bored a number of holes in it, and since doing this I have found that my 'bus runs quite differently—more silently and giving greater miles per gallon.

Why this should be I do not know; but if any of your readers can offer any better suggestion I shall be greatly pleased to try it.

LEVIS.

Manchester.

MISUSE OF A VARIABLE GEAR.

Sir,—I have read with great interest the correspondence in your valuable paper for some years, and at last I feel I must write regarding the manner in which probably 65% of the riders of that sporting machine, the 3½ h.p. Rudge-Multi, use this really excellent gear.

On a recent Sunday I happened to be walking up King's Head Hill (I believe this is its name), Chingford, when I

The Six Days Trials route passed through some beautiful and typically English scenery of the pastoral type. W. L. Danskin and F. T. Sibley, on 3½ h.p. Rudge "th-th-e-speeders," passing through the characteristic village of Shepham on the first day's run.

heard the hefly exhaust of a Rudge, with the throttle fully open. Judge my surprise when the machine appeared round a bend, two-up, travelling quite slowly. When it passed where I was standing, I noticed the gear lever four notches from the top, and the natural result was it konked out, and the pseudo airman "pushed" it to the summit, after unsuccessfully trying to restart on the hill with the gear lever still in the same position. The sight was enough to make one weep—a machine that could simply play with the gradient, pushed up by one of our "so-called speed merchants" simply through ignorance.

This is not the only case by many. The great majority of riders seem to imagine that once under way you simply shove the gear lever right forward. This practice is simply ruinous to belts and engine; and, incidentally, unless, of course, one is really moving, very detrimental to good petrol consumption.

Personally I very seldom get higher than five notches from the top even when exceeding double the legal limit. This engine simply loves revolutions.

I should be pleased if you can find sufficient space to publish this letter, as I do not consider the above treatment fair either to the manufacturers or machine.

CYRIL SINCLAIR.

"EXPERTS BARRED."

Sir,—How very annoying it must be to Mr. S. L. Bailey to find that, after several years of motor cycling, during which time he has built up quite a considerable reputation for skill, he is allowed to enter and win a race from which experts are barred. It adds one more point to his already large total of awards, so that his annoyance is considerably reduced; but what about the irritation caused to other competitors in the race? It must be very disheartening to find that a trade rider is not an expert after many years. What chance of being so classed, have they? What is an expert, please? I write these notes after reading the account, on pages 242 and 243 of *The Motor Cycle* of August 25th, about the Western Centre A.C.U. hill-climb.

London, E.C.4.

ALSO RAN.

[According to the A.C.U. open competition rules, an "expert" who has failed to win a first or second prize in an open event during any twelve consecutive months may be allowed, on application, to revert to the "general" class. —Ed.]

ALT-Y-BADY IN SECOND GEAR.

Sir,—Having just seen a Zenith on a 6½ to 1 bottom gear make a clean ascent of Alt-y-Bady, and, as I understand this hill is included in the Reliance Cup open trial, I would like to make a suggestion to fellow competitors. My second gear in this event will be 9 to 1. Will a few more, with ratios near this, join me in a second gear attempt in the trial? I am proposing this purely for the sport of the thing, and suggest we each pay a nominal "entry fee" (say, 6d.), the one who gets furthest up on this gear to take the "collection." Perhaps your representative on the hill would be kind enough to act as judge? From what I hear of the course most of us will need cheering up; so this should provide a little amusement. If anybody interested will see me at the start we can settle details there.

J. WESTWOOD WILLS.

SIDECAR BRAKES:

Sir,—In a recent issue of *The Motor Cycle*, just to hand, you invite readers' experiences of brakes fitted to the sidecar wheel.

About seven years ago I fitted an external contracting band brake to the sidecar wheel of my Clynó outfit, operated

by hand from the handle-bar. The brake band had at first a copper lining, but was subsequently lined with Ferodo or similar fabric.

My experience during about the two years that I had this brake in use was that it was quite satisfactory, provided the brake was so adjusted that it was impossible to lock the wheel, and that only a moderate retarding effect resulted. If the brake was adjusted so that, when on suddenly applying it the action was too fierce, and when travelling at any fair speed, the machine would swerve to the left, and at practically right angles to the direction of travelling, with obvious results. On the above brake, the action of the copper lining was too fierce, so it was changed for the fabric, which gave very much smoother results.

Where the brake really came in very useful was in taking left-hand corners, when, by slightly applying it, the machine would automatically turn to the left with very little effort on the driver's part.

For countries with wet climates (such as the British Isles), I would suggest a brake of some other design than the external contracting, although, in my opinion, a well-designed brake of the above type can easily hold its own in dry countries.

M.A.C.

Transvaal, South Africa.

Sir,—With regard to the correspondence on sidecar brakes in your columns, an accident which recently happened to me may be of interest. I had just purchased a heavy sidecar outfit (my only previous experience being on a lightweight solo), and after a couple of lessons essayed to drive it from Wimbledon to my residence, some fifty miles distant. I had only proceeded a few miles, slowly and carefully, when the contraption suddenly went mad, swung round to the right on to the footpath and into the ditch, like some scared rabbit seeking its hole. Of course, the ditch was a deep one—it always is on such occasions—and the result to the front springs and mudguard was disastrous. I could only gaze at the mangled remains in a bewilderment of anger and astonishment, for I had done nothing, so far as I knew, to excite the machinery.

It was only when I reached home (by train) and opened my copy of *The Motor Cycle*, just arrived, in which was Mr. Bischof's illuminating article on sidecar brakes, that the cause of my machine running amok dawned upon me, viz., I must have inadvertently trodden on the foot brake. This is explained by the fact that the foot brake on my new purchase is at the rear of the footplate and operated by the heel, while on my former mount it was in front and applied by the toe—a far more sensible arrangement.

Like "Ixion," I am a "weak, timid old man," and therefore am seeking—so far in vain—for someone able and willing to fit a compensated sidecar brake; for although the square yard of bruises I brought away from the fateful ditch has completely faded, the memory of its yawning depths remains.

TWO-STROKE.

London, S.W.

SECRETS OF SATISFACTORY ACETYLENE SERVICE.

Sir,—I notice "Ixion" asks for the secret of keeping acetylene burners alight over bad roads, and I venture to put forward my method, which I find absolutely reliable.

The first requisite is a large generator of reputed make, and this must be cleaned in three places, viz.:

(1.) The carbide chamber. Scraped clean and wiped out with an oily rag each time of refilling.

(2.) The gas vault and delivery pipe. Vault and discs cleaned and polished with an oily rag, and all holes and delivery pipe blown out clean. Felt pads removed.

BROOKLANDS WINNERS AT THE FIFTH CLOSED MEETING OF 1921.

H. F. Brockbank (2½ Brock-Blackburne), enjoyed more success than he did at Pendine. He won the 350 c.c. handicap.

E. Remington (8 Blackburne), was an easy first in the only scratch event.

J. W. Tollady (2½ Velocette) was limit man in the 275 c.c. race, and won easily.

(3.) Water chamber. Emptied and sediment rinsed out, and the grooves in the needle valve, polished bright occasionally.

This ensures a copious and continuous supply of gas. The secret then lies in leading it to the burners through large bore rubber tubes, which must be anchored their whole length and not allowed to flap about.

The acetylene tubing sold by motor cycle accessory dealers is too small in the bore, and does not maintain a sufficient head of gas to keep a steady pressure on the underside of the burners, and therein lies the crux of the whole question, presuming, of course, that the generator is functioning and the burners are clean, and there are no leaks at the tube junctions.

My installation, which cost only a few shillings, consists of second-hand W.D. surplus goods, and is rigged out as follows:

Lucas 462 head lamp; combination handle-bar bracket, P. and H. generator 124, Lucas sidecar lamp 454, ditto rear lamp 344.

Burners.—Head lamp, 14 litres; side and tail, 3½ litres. Tubing.—Best black douche obtainable from any chemist; copper through sidecar nose.

This gives two and a half hours continuous illumination, and is lit up in the following manner.

When lighting up time arrives, the water is turned on to the necessary point predetermined by experiment. After a mile has been covered one match will light the three burners, and the journey can be continued inside one minute.

Later I hope to fit spark gaps across each burner and rig up a switch to short the plug for a few revolutions.

At the present time I am riding backwards and forwards from Tring to London daily on my Quadrant sidecar. This means traversing the Edgware Road, which, as your readers know, is a good test for any lighting installation.

W. E. BAINES.

TWENTY-THREE YEARS AGO.

Sir,—I was much interested in Mr. Percy Richardson's letter entitled as above in your issue of the 4th inst., having had a Werner on similar lines to the one he describes for trial a little later than 1898, by which time electric ignition by battery had become standardised. I remember the battery on the machine supplied to me had run down, and there was some difficulty about getting it recharged.

Not very long afterwards I purchased second-hand a front-driving Raleigh motor bicycle, which gave surprisingly good results. Like the Werner, it had a surface, or, more properly, a wick carburettor. The trouble was that the mixture was upset every time the machine received a jolt. Later I put together a carburettor from tin canisters and a piece of sponge, in which this difficulty was got over by passing all the air to be carburetted through the pool of petrol at the bottom of the carburettor, thereby keeping the liquid in a constant state of agitation.

Col. G. P. Mills, at that time responsible for the Raleigh products, agreed with me as to the surprising efficiency of an engine mounted in front of the head and driving the front wheel, as compared with the ordinary position and transmission. He had found this advantage most marked, and was able to prove it definitely by similar engines used in the two positions. It would therefore seem quite possible that the existing lightweight records are at the mercy of any manufacturer who likes to build up a machine with an efficient engine located *à la* Werner.

Mr. Richardson's testimony to the good balance of the Werner with its highly placed engine and rider will come as a tough nut to our low centre of gravity friends; but I have no doubt he is right, so far as he goes, anyway. His opinion on the Ner-a-car in this connection would be interesting.

DOUGLAS LEECHMAN.

REGARDING THE N.W. CENTRE TEAM TRIAL.

Sir,—The Warrington Club is to be congratulated on still holding the North Western Centre Blake Cup.

I understand it has been decided to cancel this year's team trial, held in June—a very wise decision, and one that indicates that discretion is the better part of valour.

Any of your readers who were present at this year's trial will not readily forget the indescribable confusion at the start, delayed over an hour, where no officials knew their jobs; also the awful fracas at the 18in. deep watersplash,

specially prepared for the enjoyment of several chaps-à-bancs loads of jeering spectators, who arrived in good time for the day's "sport," together with dozens of motor cyclists, evidently also in the "know."

I do not know the financial position of the North-Western Centre, but suggest that, if possible, an official, preferably one with commonsense, be sent to witness the M.C.C. team trials next year. Then he could bring back first-hand knowledge of how the "job" should be done. WITNESS.

Liverpool.

THE CYCLE CAR OF MODERATE PRICE.

Sir,—Mr. William A. Weaver (who in your issue of August 18th refers to my previous letter on this subject) states that "thousands of sidecar enthusiasts, who, after all, are the people most likely to be interested in cycle car developments, regularly take two adult passengers and a child, and often luggage as well, anywhere with a 4 h.p. engine; and a 6 h.p. machine seems to be well on top of its work, and even with such a load is practically a top gear 'bus anywhere," which no doubt applies to districts where ordinary "give and take" roads are the rule; but, in such a part of the country as, say, Devon and Cornwall, my experience has been that a good single will do it *sometimes*, but at what cost? and that a 6 h.p. twin is anything but a top gear 'bus with full load in the same two counties. The West Country is seeing probably more sidecar and cycle car tourists this year than ever before, and I have noticed a great preponderance of

THE SIX DAYS TRIALS.

A pretty vista near Bidmore. G. W. Ravenhall (3½ Rover) on the hill leading from the village.

higher powered engines among those passing through Tavistock, and all drivers of whom I have asked their opinions say, "high power every time for your hills."

If Mr. Weaver would suggest that his future 5 or 6 h.p. cycle car engines will be as efficient as the present day 8 h.p. engines, then I think they may fill the bill as a true "go anywhere" power unit. If so, may they come soon. I am not competent to enter into a technical argument, but beg to submit my humble views as matters stand to-day. However, our mutual friend "Ixion" knows this district well, I believe, and it would be a matter of interest if, with his great experience, he would give his opinion as to the present h.p. required to haul in comfort a driver, passenger, child, and luggage from Exeter to Penzance via Moretonhampstead, Tavistock, Gunnislake, and Liskeard. This is not a freak route, but a good main road and picturesque, and is that usually taken going down West from Exeter.

Tavistock.

DUMPLING.

MYSTERIOUS LACK OF POWER.

Sir—I have a De Dion machine (apparently about 1908), which a friend and I have been endeavouring to put in going order and modernise, but after spending hours and hours of faithful work the machine refuses to pull, and we are now dead beat. The cylinder has been reground, new piston and rings fitted (by an expert firm), modern Amac carburetter fitted, timing has been carefully set, all bearings are in good order, excellent spark, and compression splendid. The engine will start easily when run off, but only develops sufficient power to pull the machine on the level, and stops immediately the driver mounts the saddle. On the stand the engine will fire evenly and continuously. Valves have been carefully ground in, and from a theoretical point of view everything appears to be in order. Can any reader say "what's up with it"? CONSTANT READER.

Grangetown.

BRITISH MACHINES IN SWITZERLAND.

Sir,—I was very pleased to see a letter in your paper a little while back saying that several makes of British motor cycles could be obtained in Switzerland. In spite of this, however, during the last three months in Montana I have only seen one cycle of British make, and that a Triumph, which had been brought over from England by a couple of fellows touring. It is not that one rarely sees a motor cycle here, for I have seen many, and they have all been either Swiss or American machines. One Sunday I saw three different Indian motor cycles. I must confess it would please me much more to see British machines knocking about.

F. L. RHODES.

Montana, Switzerland.

1,000 MILES WITH A SLEEVE VALVE ENGINE.

Sir,—I was very much interested to read in *The Motor Cycle* dated July 21st a description of the new Barr and Stroud single sleeve valve engine. It occurs to me that your readers might be interested to hear how one of these engines has behaved over 1,000 miles running in the hands of a private owner.

Some months ago I was fortunate enough to obtain one of these engines (the first privately owned one in the country), which I had fitted into a light touring machine.

As the writer of your article stated, the first point which strikes one is the entire absence of tappet and mechanical noises: there is the sharp crackle of the exhaust, and nothing else. The second point is the perfectly astounding power and flexibility of the engine. This flexibility was brought home to me by the fact that I took delivery of the machine at Messrs. Barr and Stroud's works at Anniesland, and immediately drove it straight through the centre of Glasgow. The controls were all strange to me, and yet on only one occasion did I have to come off a top gear of 5 to 1.

For the first two hundred miles I did not let the engine out, although right from the start it seemed to keep begging me to let it have a romp. That is the impression it gives one—a desire to travel faster and faster from sheer *joie de vivre*.

My petrol consumption is slightly over 120 miles per gallon. Oil consumption I have not measured quite so carefully, but it is certainly over 2,000 m.p.g., and I have not found any trace of overheating. Maximum speed by Bonniksen speedometer is 52 m.p.h., and the engine will

throttle down to 8 m.p.h. on top gear quite comfortably. My Capac carburetter gives very nice running, but it is not set for maximum speed, and I am sure that the figure mentioned above is not by any means the limit of the engine.

The consistent smoothness of the engine is very marked, the absence of "fuss" being delightful, while the pull is so elastic that one hardly realises how fierce is the acceleration.

During the 1,000 miles I have had no trouble of any kind whatsoever, and the only time I have seen the internals of my engine was when Messrs. Barr and Stroud asked me to bring the machine in to them in order that they might fit their new design of piston—a piston which, incidentally, reduces the oil consumption still further. On this occasion I was the amazed witness of my engine being stripped in under fifteen minutes! I do not mean just taking off the cylinder head, but actually and literally that in fifteen minutes from the commencement of operations the piston, connecting rod (including big end bearing), the shaft (including main bearings), also sleeve, sleeve-pinion, magneto, and the cylinder head were lying on the bench beside the machine. Fifteen minutes! Before now I have spent nearly eight hours reducing a poppet engine to the same condition. The cylinder barrel and the upper half of the crank case remained in the frame.

I freely admit that this is an enthusiastic letter, but I am an enthusiastic owner. I will never have another poppet engine. I have no connection with Messrs. Barr and Stroud in any way whatsoever, but I do admire their production

G. V. LAWRIE.

SUMMARY OF CORRESPONDENCE.

Having read the account of the Cumberland County M.C.C. trial on Wrynose Pass, Mr. James Beach, of Blackburne, writes that his father made a clean ascent of this hill on an 8 h.p. New Imperial sidecar carrying two passengers.

Mr. R. Dunkley records an improvement in the petrol consumption of his 4 h.p. Triumph from 85 m.p.g. to 120 m.p.g. by fitting a W.S.R. variable jet. His figures were tested over an extended tour.

26 m.p.h. for 166 miles from Lanarkshire to Aberdeenshire, was averaged by Mr. James Rae, a sixteen-year-old rider of a 2½ h.p. Levis.

Prompted by the article on "The Lure of the Motor Cycle," by "V.H.," in *The Motor Cycle* of August 18th, "Mechanovice" reports on the suitability of his machine, a lightweight with a 2½ h.p. Union engine, for the beginner to the pastime.

The Tan-Sad Works, Birmingham, write pointing out the need for emphasising the safety of pillion riding when a proper pillion seat is fitted.

Mr. W. E. Jenkins describes his very satisfactory experiences with the Degory No-jet carburetter as fitted to 8 h.p. Enfield sidecars. It gives, he says, greatly improved acceleration and power.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*:

"MOTOR CYCLES AND HOW TO MANAGE THEM"
The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Price net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

"MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

OIL FOR HUB GEARS.

Q. What is the best oil for use in the Armstrong hub gear?—W.J.A.

A thin cycle axle oil is the most suitable lubricant; engine oil should on no account be used.

OIL SLINGING.

Q. My single-cylinder Zenith-Jap slings oil from the driving side main bearing. I got the bearing rebushed, but it still slings oil to such an extent that I can push the machine along with the belt simply slithering round the pulley without turning the engine at all, yet there is practically no play in the bush. Can you tell me of any device to stop the trouble?—H.T.L.

If the bearing is in good order, the oil slinging in all probability is due to a defective or inefficient crank case release valve. The fitting of a new one, or attention to the existing one, would probably put matters right.

NEITHER POWER NOR SPEED.

Q. I have had some trouble lately with my 2½ h.p. four-stroke motor cycle, which runs well on the stand, and seems to develop ample power, but on the road it is very slow. I do not think it will do more than 15 m.p.h., and the slightest hill has to be rushed. The engine seems in good order. Compression is good, and the magneto always gives a good spark at the plug. Starting is easy, either when cold or warm, but the throttle lever must be three-quarters open when starting. When I am on the machine with the throttle lever three-quarters open and the air lever open fully, I can just do the above speed—15 m.p.h. Should I close the throttle slightly the engine stops firing at once. What is the cause of this? The jet is No. 36.—J.H.

You do not say anything about the timing of your engine; but we should imagine that the ignition is unduly retarded. Make quite sure that the spark occurs when the piston is on top dead centre with the magneto control two-thirds retarded. With a lightweight machine such a large jet as No. 36 should not be needed, and it would appear either that there is a considerable air leak in the induction system, or that the throttle itself is not responding to the movement of the throttle lever. Make sure that the throttle wire is correctly adjusted.

EPICYCLIC GEARING.

Q. Can you please inform me where I can obtain a description of the principle of the change speed gear of the N.S.U. German motor cycle? Possibly, quoting from memory, you can say if it consists of a sun and planet wheels with a large internally toothed wheel engaging with the outside of the planet wheels. Can you inform me of similar gear arrangements fitted to motor cycles or cars?—B.S.

The N.S.U. gear consists of an epicyclic train on the common lines wherein a driven internally toothed ring is used. The pulley is connected to a carrier on which planet pinions are mounted, and a central sun wheel is clutched either to the internal ring (for high gear) or to a non-rotating portion of the machine (for low gear). Similar gear arrangements have been so numerous that it is impossible to give the names of all of them, but the Armstrong and Sturmev-Archer three-speed hubs were typical examples. Epicyclic gearing is now seldom used on motor cycles, but it is used on certain motor cars.

COOLING THE EXHAUST CAP.

Q. I have recently read a great deal about the "hot spot" on air-cooled engines, and should be glad of your criticism of an experiment I propose to carry out with my 4½ h.p. B.S.A. outfit. The exhaust valve cap is countersunk on the top, about ¾ in. deep and 1 in. wide. I propose to screw into this an inverted U tube (the boiler), about 4 in. long, and connect flow and return pipes to a small water tank higher up. (1.) Will this "cold spot" tend to distort or crack the cylinder when really hot? (2.) Will ordinary petrol piping be large enough for conducting the circulating water, or could rubber tubing be used.—W.H.M.

(1.) It is very unlikely that the distortion would be so great as to crack the cylinder. (2.) Ordinary petrol piping would be practically useless. You would need connections at least ½ in. internal diameter. It is doubtful if the experiment would be of any practical value. The best thing you could do would be to fit aluminium or copper radiating fins to the exhaust valve cap.

A FINE PHOTOGRAPHIC IMPRESSION OF BROOKLANDS RACING.

H. Le Vack (7-9 Indian sidecar) the scratch man, overtakes E. Baragwanath (8 Martin M.A.G. sidecar) at the last Brooklands meeting. Le Vack's streamline sidecar is apparently useful!

READERS' REPLIES.

SLIPPED OR STRAINED MAGNETO DRIVE.

Your correspondent "R.F." need not be afraid of taking down his timing on the Bat-Jap. It is quite simple after doing it once or twice. What has happened is that when the gudgeon pin broke, the shock unscrewed the bevel pinions on the timing—either the shaft pinions or half-time or both. The bevels are screwed, and when they have been taken off they should be tapped up tightly with a piece of lead or copper on the teeth. I can re-time my ignition in less than five minutes, even in the dark! (NOTE.—The correct way to "advance" is to push the lever down.)—W. H. TALBOT SMITH.

ACTION OF ACETYLENE ON COPPER.

I notice in the issue of *The Motor Cycle* of August 25th that the question of the action of acetylene on copper has arisen once more. Some years ago I made a copper bottom for the water container of a large car generator. The lower surface was, of course, subject to the action of the gas when in use. On recharging the apparatus for the first time, I noticed that the copper was covered by a red deposit, which instantly exploded on being touched with the fingers. The action of acetylene on copper and certain other metals is the most characteristic property of the gas. The latter may be regarded as hydrogen carbide, and the reaction consists simply in the replacement of the hydrogen atoms by metallic atoms to give a metallic carbide:

Carbides formed in this way—and for that reason usually called acetylides—differ from calcium carbide in their properties. The latter will stand heat, but decomposes at once when damped; while the former are unaffected by water, but decompose explosively when heated in the dry state. In conclusion, I might remark that the rubber tube sold by chemists for feeding-bottles makes a far more durable flexible gas pipe than the article usually supplied for the purpose. The one objection is its liability to be pinched or to kink, but this can be avoided by slipping inside it a long spiral of fine wire. This can readily be made by winding ordinary flower wire round a $\frac{3}{16}$ in. rod, and then pulling the spiral out to the required extent.—JOHN H. HATCH.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"W.J.R." (Rye).— $3\frac{1}{2}$ h.p. Sports Sunbeam, 8 h.p. A.V. Monocar, or $3\frac{1}{2}$ h.p. Zenith-Bradshaw.

"A.R.E." (London, S.E.).—O.K. Junior, Mark IX.

"J.D.T." (Oxford).—Wates acetylene to electric lamp conversion set.

"W.H.W." (Rugeley).—Ner-a-car: Reliability, comfort, ease of handling, etc.

"H.W.G." (Watford).—Comparisons between the all-chain Triumph and Norton machines (with sidecars). Oil and petrol consumption, reliability, and speed.

B6

Important Dates.

Thurs., Sept. 8th—Norfolk M.C. and L.C.C. Open Speed Trials.
Sat., Sept. 10th—Liverpool M.C. Open "Reliance Cup" Trial.
Sat., Sept. 17th—Grand Prix Race for Cycle Cars.
Sat., Sept. 17th—Midland Centre A.C.U. Open Hill Climb.
Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.
Sat., Sept. 24th—M.C.C. Sporting Trial.
Sat., Oct. 1st—Doncaster and District M.C.C. Open Speed Trials.
Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—Scottish Motor Show (including motor cycles).

"A.K." (Nottingham).—Four-cylinder Henderson (Model K).—General reliability, economy, and controllability, compared with V twins of 6 or 8 h.p.

"A.I." (Paisley).— $2\frac{3}{4}$ h.p. Wooler: General reliability, workmanship, flexibility, gear efficiency, and effect of rear springing on steering.

"J.R.D." (Newport, Mon.).—Beardmore-Precision with sidecar: Consumption, speed, spring frame, comfort, power, and general running.

"C.C.L." (Bayswater).— $3\frac{1}{2}$ h.p. o.h.v. Douglas: General running, speed, accessibility, and suitability for reliability trials as well as speed events.

"S.W." (Norwich).—Most suitable plug for 1921 Alldays-Allon.

Originally intended for the T.T., this new o.h.v. Rover engine made its first public appearance at the last race meeting at Brooklands.

In the Cumberland Open Trial.

An addition to the already published list of awards is the second-class prize earned by W. Wells, who rode a $3\frac{1}{2}$ h.p. Sunbeam.

Found on the Road.

The rider who lost an article of wearing apparel on the finishing straight at Brooklands on August 27th should forward a description to Mr. L. W. A. Lankester, 1, Rectory Place, Guildford.

New Home for a Promising Machine.

Increasing sales of the Massey-Attran Motor Co., Ltd., thanks to a consistent policy of embodying a refinement of finish, in conjunction with a run of competition successes, necessitate the occupation of larger and better equipped premises at 52, Bordesley Street, Birmingham.

A Taxation Concession.

Economic Motors, Ltd., 62, East Castle Street, Oxford Street, London, W.1, who make a lightweight two-stroke attachment for bicycles, which is also suitable for tradesmen's carriers, having approached the Ministry of Transport, have procured a concession which allows these vehicles fitted with mechanical motor attachments to be taxed 30s. instead of £4.

A Midland Traders' Trial.

A social run, combined with a reliability trial, was organised by the proprietors of Redditch Garages, Ltd., of Redditch, amongst their own customers, on August 27th. Some really stiff hills were included, amongst them being Flagstaff Hill and Farlow Bank. The trial finished near Worcester after a sporting run of about eighty miles. No trade or professional riders were eligible, and, as it proved, both first and second prize winners had never previously competed in a trial. The winner was N. F. Cave (6 B.S.A.), who, therefore, holds the challenge cup and receives a gold medal. The second places (silver medals) were gained by car owners, while the following completed the course successfully, but lost marks on time: H. Charman ($3\frac{1}{2}$ Norton), P. J. Howles (5-6 Brough), G. Surman ($4\frac{1}{2}$ B.S.A.), and W. Swiffen ($3\frac{1}{2}$ Norton).

Catalogues Received.

Messrs. Coppen, Allan, and Co., 89, Great Portland Street, London, W.1: An excellently got-up catalogue listing Reading-Standard motor bicycles and the Plus One and M.P. sidecars.

Tryus Cycle and Motor Co., Johnstone Street, Birchfields, Birmingham: Silver Prince lightweight sidecar outfits are described in the folder received from this company. J.A.P. or Villiers units of $2\frac{3}{4}$ h.p. are used, and the other components of the specification are all of first-class make.

Special Features.

SIX DAYS TRIALS DESCRIBED.
PASSENGER MACHINE TOPICS.
THE TOURIST TROPHY DISCUSSION—
MORE OPINIONS.

Parking Places for Motor Vehicles.

Huddersfield is, according to an A.A. report, the latest town to allot recognised parking places for motor vehicles belonging to visitors making short calls.

Garages.

Only cheap and efficient garage service is wanted in all our large cities to increase the popularity of motor cycling.

A Royal Motor Cyclist.

It is some time after his death that we learn that the late King Peter of Serbia, always a sportsman, took to a motor cycle in his old age, and enjoyed speeding up to about 35 m.p.h.

Motor Cycles in Brazil.

Up to the middle of May, 1921, the following is the number of motor cycles licensed in the State of Sao Paulo, Brazil, the machines being classified according to makers' names: Harley-Davidson 58; Indian, 34; Henderson, 6; Excelsior, 4; Terrot, 4; F.N., 3; Motosacoche, 3; Scat, 2; B.S.A., 2; Warvicksbue, 1; A.J.S., 1; Allon, 1; Davidson, 1; Precolio, 1; Carriers, 1; Matchless, 1; Special Cyclo, 1; Humber, 1; Opel, 1.

Inter-club Rally at Hendon.

Club secretaries are reminded entries for the Challenge Shield to be awarded at the North London M.C.C. Inter-club rally at Hendon on the 17th inst. should be in the hands of the Honorary Organiser, "The Nook," Wellington Road, Bush Hill Park, London, N., on or before next Saturday. There are several other prizes; and unattached motor-cyclists are specially invited to attend what is believed to be the first big rally in London district.

Insularity Not Confined to Englishmen.

In our French contemporary, *Moto-Revue*, one of its contributors points out with regret that France was not represented in the International Six Days Trials. He infers that the reason was because the cost would be too great. "Always the same story," he writes, and goes on to point out that English competitors did not hesitate to make the necessary sacrifice. "Is it true," he asks, "that it is the Frenchman who always thinks that the boundary of his country is the end of the world?"

The Death of D.O.R.A.

D.O.R.A. is dead.

* * *

Various rulings to which we have become accustomed are automatically rescinded by the official "termination of the state of war."

* * *

Lighting-up time reverts to the "one hour after sunset" rule.

* * *

Latterly, the half-hour after sunset under D.O.R.A. has been acknowledged more in the breach than the observance thereof.

* * *

Pedal cycles are now exempt from rear light carrying.

* * *

The joy of a certain section of the cycle community who object to safeguarding others, and not least themselves, will be short-lived—because new legislation of a permanent nature is contemplated.

* * *

By a curious anomaly, motor bicycles are not bicycles within "the meaning of the Act." Pre-war test cases established this unfortunate truth.

* * *

Solo motor cyclists must carry rear lamps on their machines.

THE SIX DAYS TRIALS IN THE WEST.

On part of the Devonshire portion of the route. F. J. Watson (6 Ariel sc.) near South Molton.

Westoe M.C.

Membership of this "young" club now stands at forty. The hon. secretary is Mr. Arnold Joseph, 7, Westoe Crescent, South Shields.

East Midland Centre A.C.U.

Only twelve classes in all will be contested at the hill-climb organised by the North Derbyshire M.C.C. on behalf of the Centre, to be held on Saturday. Entries, which closed on Monday, are confined to resident members of clubs in the E.M.C.

Coatbridge, Airdrie, and District M.C.C.

Formula results are now available of the open hill-climb held on the 20th ult.
350 c.c.—1, G. Kelly (2¼ A.J.S.); 2, J. Calder (2¼ New Imperial); 3, W. Robertson (2¼ Velocette).
600 c.c.—1, J. Calder (2¼ New Imperial); 2, G. Kelly (2¼ A.J.S.); 3, W. Robertson (3 A.B.C.).
OVER 600 c.c.—1, J. Calder (2¼ New Imperial); 2, G. Kelly (2¼ A.J.S.); 3, W. Robertson (3 A.B.C.).

SIDECARS.—1, G. Kelly (2¼ A.J.S. sc.); 2, A. Aitkin (4 Triumph sc.); 3, J. Grant (8 Enfield sc.).

Worcester M.C.C.

Fastest time of the day at the recent closed speed trials at Madresfield Court Drive was made by Reg. Brown (3½ Sunbeam). Results, with times, follow:

1,200 c.c. PASSENGER CLASS.—H. F. S. Morgan (8 Morgan), 31s.; W. B. Gibb (3½ Douglas), 32 7-10s.

250 c.c. SOLO CLASS.—B. Kershaw (2¼ New Imperial), 28s.; K. B. Batchelor (2¼ Diamond), 36s.

350 c.c. SOLO CLASS.—Eric Williams (2¼ A.J.S.), 26½s.; B. Kershaw (2¼ New Imperial), 28½s.; F. W. Cotton (2¼ Cotton-B), 31s.

500 c.c. SOLO CLASS.—R. Brown (3½ Sunbeam), 26s.; C. Lewis (3½ Sunbeam), 26½s.; Eric Williams (2¼ A.J.S.), 27½s.

750 c.c. SOLO CLASS.—R. Brown (3½ Sunbeam), 26½s.; W. B. Gibb (3½ Douglas), 27 3-10s.; G. L. Gardner (3½ Sunbeam), 27 3-10s.

UNLIMITED SOLO.—Eric Main (8-10 Zenith), 26 3-10s.; R. Brown (3½ Sunbeam), 26½s.; W. B. Gibb (3½ Douglas), 27s.

500 c.c. PASSENGER MACHINES.—W. B. Gibb (3½ Douglas), 33½s.; R. Brown (3½ Sunbeam), 34½s.

750 c.c. PASSENGER MACHINES.—R. Brown (3½ Sunbeam), 30½s.; W. B. Gibb (3½ Douglas), 32½s.

SPECIAL CLASS FOR PRIVATE OWNERS.—F. Pardoe (3½ Norton), 27s.; C. Eveson (3½ Norton), 27½s.; H. Woodhall (3½ Sunbeam), 28½s.

Week-end Club Events.

Sept. 8.—Townton and District M.C. and L.C.C. Fifty Mile Trial.

Sept. 8.—Worcester and District M.C.C. Paper-chase.

Sept. 8.—Berwick and District M.C. Route Finding Competition.

Sept. 9-10.—Essex M.C. Twenty-four Hour Trial to Bala.

Sept. 10.—East Midland Centre A.C.U. Closed Hill-climb.

Sept. 10.—Southport M.C. Speed Trials on the Sand.

Sept. 10.—Ilkley M.C. and L.C.C. Speed Trials for English Trophy.

Sept. 10.—Ulster M.C.C. Social Run.

Sept. 10.—Surrey and District M.C.C. Ballards Cup Trial.

Sept. 10.—Newcastle and District M.C. Knock-out Hill-climb.

Sept. 10.—North Wales M.C.C. Sporting Trial.

Sept. 10.—Oxford M.C. Hill-climb.

Sept. 10.—Hillsborough M.C.C. Petrol Consumption Test.

Sept. 10.—Luton and South Beds A.C. Reliability Trial.

Gravesend and District M.C.C.

On Wednesday, the 24th ult., a very successful slow hill-climb was held. Matchless, Rover, and Eclipse machines being successful in their respective classes.

Bradbury M.C.C.

On the occasion of a recent rally of Bradbury riders at Alms Hill, it was proposed to form a club, as above, for owners of these machines only. Those interested should communicate with Mr. A. F. Godwin, The Homestead, Belmont Road, Twickenham.

Okehampton M.C.C.

Results have now been announced of the reliability trial to Penzance and back, held in the latter half of last month. There were twenty starters, and the best performance, irrespective of class, was made by F. Tenby (4 Norton sc.).

Results:
SOLO (HEAVY).—1, E. J. Hosking (8-10 Excelsior) and J. P. A. Spencer (3½ Triumph), error 0; 2, J. G. Durrant (3½ Norton) and T. Woods (4 Triumph), 30s.; 3, W. Backway (4 Triumph), 2m. 30s.

SOLO (LIGHTWEIGHT).—1, H. Brooking (2¼ Verus), error 1m.; 2, P. Cowling (2¼ Douglas), 3m. 30s.; 3, R. G. Eccles (2¼ Douglas), 11m.

SIDECARS.—1, F. Tenby (4 Norton sc.) and W. H. Newman (8 Enfield sc.), error 30s.

York and District M.C.

Results follow of the very successful hill-climb held on Garrowby Hill on the 27th ult.

275 c.c.—General: 1, R. Wood (2¼ New Imperial), 1m. 5½s.; 2, D. Brigham (2¼ Omega), 1m. 7½s.; 3, Miss Wilson (2¼ Velocette), 1m. 27½s.

300 c.c.—General: 1, C. S. Russell (2¼ A.J.S.), 1m. 4½s.; 2, R. Wood (2¼ New Imperial), 1m. 4¾s.; 3, G. M. Stevenson (2¼ Sunbeam), 1m. 6½s.

560 c.c.—General: 1, R. T. Cawthorne (3½ Norton), 49½s.; 2, W. Wells (3½ Sunbeam), 53½s.; 3, R. C. Morris (3¼ Scott), 1m. 5½s.

Amateurs: 1, W. Wells (3½ Sunbeam), 56½s.; 2, G. Bower (3½ Norton), 57½s.; 3, W. Wilkinson (3½ Sunbeam), 1m. 7½s.

750 c.c.—General: 1, R. T. Cawthorne (3½ Norton), 50½s.; 2, W. Wells (3½ Sunbeam), 57s.

Amateurs: 1, W. Wells (3½ Sunbeam), 55½s.; 2, G. Bower (3½ Norton), 56½s.; 3, W. Wilkinson (3½ Sunbeam), 1m. 2½s.

UNLIMITED.—General: 1, R. T. Cawthorne (3½ Norton), 49½s.; 2, W. Wells (3½ Sunbeam), 55½s.

Amateurs: 1, W. Wells (3½ Sunbeam), 55½s.; 2, G. Bower (3½ Norton), 56½s.; 3, W. Wilkinson (3½ Sunbeam), 1m. 2½s.

THE SIX DAYS TRIALS Described

Two private owner competitors, A. L. Cranch (5-6 Rover sidecar), and N. Clayton Russell (4 Norton sidecar), passing a "park" of tourists' cars and chais-a-bancs in Cheddar Gorge.

Modern Motor Cycles demonstrate their Reliability under Conditions such as prevail in their use by the Average Owner. 730 Miles over Roads which are traversed by Tourists, and a searching Speed Test on Brooklands. Oil and Petrol Consumption and Silence Important Factors. All Classes of Machines do well.

MONDAY'S RUN, 135 Miles.

Route: Brooklands, Chertsey, Staines, Windsor, Maidenhead, Henley-on-Thames, Benson, Oxford, Woodstock, Enstone, Chipping Norton, Northleach, Cirencester, Crudwell, Malmesbury, Chippenham, Box, Bath.

In last week's issue of *The Motor Cycle* we described the initial stages of the annual Six Days Trials organised by the Auto Cycle Union, together with an account of the first day's run, which is here recapitulated.

Eighty-eight of the ninety-five entrants passed through the brake test on the Brooklands test hill, and eventually started on the easiest day's run ever experienced in a big trial.

Notwithstanding the "go as you please" nature of the first day's trial, it took a somewhat heavy toll, and no fewer than six competitors were missing when the men were timed in at Bath. These were: C. Hanwell (2½ Cedros), who, through a loose jet, lost so much fuel that he had to break the seals on his filler cap in order to replenish, and automatically retired; L. H. Wells (2½ Hawker); J. C. Walker (2½ Edmund); N. Hall (2½ O.K. sc.), gear box; L. Peaty (2½ Hawker sc.); and R. C. Davis (8 Chater-Lea sc.), indisposed.

Attachment for controlling the clutch pedal from the handle-bar on Harveyson's 4 h.p. Harley-Davidson.

The marks lost were:

D. Read (2½ Ready), 5, stopped on Ditteridge Hill.
H. F. Fellowes (4 Coulson), ran out of petrol and broke seals.
A. Eckersley (3½ Duzmo), 6m. late.
T. F. Blumfield (6 Ariel), 6m. late.

A handful of powdered graphite was responsible for the withdrawal of Neville Hall's O.K. sidecar. He inserted it in the gear box, and it choked a vital oilway. H. H. Nicholson (3½ Martinsyde), who ran out of petrol on the first afternoon's run, and was sixteen minutes late in consequence, has been allowed a clean sheet, as he did not take in a sufficient quantity of fuel at Chipping Norton.

TUESDAY, 155½ Miles.

Route: Bath, Weston, Calcot Farm, Dursley, Wootton-under-Edge, Kingswood, Wickwar, Chipping Sodbury, Keynsham, Bishopsworth, Cheddar (lunch), Bleadon, Highbridge, Bridgewater, Spaxton, Kingston, Crowcombe, Wivelscombe, Norton Fitzwarren, Taunton.

The standing proverb about the Six Days is that the silly men drop out on the first day and the unlucky men on the second day. But this trial broke all records in casiness for two days. Tuesday's run consisted of 155½ miles of roads which were sometimes narrow and twisty, occasionally rough, but never difficult. Half a dozen hills or so were officially observed, but their good surfaces and gentle gradient permitted any good 500 c.c. solo to climb on top gear, or, at the worst, on second gear, with the thrattle practically shut. The ride would have been actually boring for most of the competitors if the hope of earning bonus marks by phenomenally low petrol and oil consumptions had not kept them busy. Extraordinary efforts are being put forth in this direction, and the week's consumptions are likely to prove illusive to the general public. Many riders free-

In the picturesque village of Cheddar—H. F. S. Morgan at the wheel of his 8 h.p. short wheelbase Morgan. The Gorge has just been passed.

wheeled down every slope, long or short, steep or gentle, and several sizable engines are expected to register 120 m.p.g. of fuel for the week. Similarly, oil was pumped in very gingerly fashion. E. Foster, on the big Raleigh twin, actually averaged 2,400 m.p.g. on the new Shell oil up to Tuesday night, and the smaller Rover engines showed figures of almost equal credit. In fact, Monday and Tuesday were really nothing more or less than a glorified consumption test. Tank replenishment was timed for 8 p.m. on Monday at Bath, and proved a very protracted business. The riders reassembled at the Tramway garage after dinner at their (possibly far distant) billets, and some of them departed towards midnight: but if the tank was filled in the owner's absence, precious fuel might be spilt or mis-measured. By the lunch stop at Cheddar on Tuesday, practice had rendered the staff more expert, and little delay occurred.

Tuesday's Run in Detail.

Bright sunshine, a rising glass, and a cool, light north-west wind graced Tuesday morning's start. E. Foster obtained leave to fit a new rear cover, as a stone had cut his original cover *en route* to Brooklands last week, but he pulled it off the rim in dodging a traction engine later in the day. Supplies of National benzole were not available for those who had nominated it as their fuel for the week. Wells's Hawker was added to the list of Monday's retirements. Several men discovered that they were not achieving quite as good a petrol mileage as they expected. The route made rings round the east of Bristol before striking south for Cheddar Gorge. Weston Lane, Darley, and Dundry were the morning hills, each of which attracted a fair concourse of spectators. The usual prac-

tice was to climb throttled down to about 20-25 m.p.h. on second gear, closing down a little further for the sake of silence if any judges were noticed to be present. The sight of Dr. Low's familiar figure always caused throttles to shut abruptly. Edwards had equipped his Coulson with a new belt at the start, and it stretched fast enough to make him anxious up Weston Lane. On Dundry Hill the Rovers were remarkably quiet; the Dunells held their $4\frac{1}{2}$ to 1 top gears until near the summit; whilst the A.J.S., Rudge, and Ariel teams all made outstanding performances. Ebbelwhite was out trying to trap men ahead of time. In the descent of Cheddar Gorge, Clayton Russell upset his Norton and cut his forehead, but was able to continue. Cheddar was crowded with enthusiastic visitors, some of whom climbed several

The Dureff four-speed chain gear box fitted on N. Clayton Russell's Norton outfit.

of the day's test hills with four, five, or even six, passengers on their sidecar outfits. After lunch there were four observed hills—mostly christened by false names in the programme. Cothelstone Hill, on the Quantocks, was the longest, but any self-respecting roadster should roar up it on second, and the majority of the entry could have touched 40 m.p.h. on it if they had dared. The silence regulations restrained them, to say nothing of the oil and petrol economy bonus. Under such conditions it would be sheer idiocy to select any ascent for special praise. In other words, the afternoon run was another gentle tour. Stobart's James sidecar unfortunately collided with a motor van eight miles out of Taunton. The frame was too badly buckled for further participation in the trials. Two cases of broken petrol filler seals had occurred thus early in the week. Hanwell broke his seals as the result of a loose jet, and promptly retired. But Fellowes, after breaking his seals as the result of a tank drained by a flooding carburetter, elected to ride on, and so compelled the judges to discuss the question of disqualification.

Tuesday's retirements included unlucky thirteen, P. R. Dowson, who carried that number on his $2\frac{3}{4}$ h.p. Hawker. Others to retire on the second day were: E. Munday ($2\frac{1}{4}$ New Hudson), D. Read ($2\frac{3}{4}$ Ready), and H. F. Fellowes ($2\frac{3}{4}$ Coulson-B).

Very few riders had lost more than a single figure number of marks before Wednesday, but A. G. Wall ($2\frac{1}{4}$ Cedros) and Graham Oates ($2\frac{3}{4}$ Edmund) were exceptions, having each lost thirty.

New front wheel brakes with compensating action are fitted to the T.B. three-wheeler.

WEDNESDAY, 175 Miles.

Route: Taunton, Wivelscombe, Raleigh's Cross, Heath Poul Cross, Timberscombe, Wootton Courtney, Luccombe, Porlock, Lynmouth, Parracombe, South Molton, Rackenford, Tiverton (lunch), Cullompton, Honiton, Sidford, Colyford, Lyme Regis, Morecombelake, Marshwood, Broadwindsor, Winsham, Chard, Combe St. Nicholas, Taunton.

Wednesday morning broke fine and cool, thus robbing the one stiff day of all its terror. A few drops of rain fell as the 350 c.c. men climbed Lynton, but the sky soon cleared. Thanks to the dry weather, Porlock and Lynton hills were firmer and smoother than we had ever seen them. Edwards, on the $2\frac{3}{4}$ h.p.

The Six Days Trials Described.—

Coulson-B, never required bottom gear except up these two famous hills, and the score sheet indicated that, if the speed and condition tests at Brooklands on the last day failed to impose heavy penalties, an unparalleled percentage of gold medals should be won. Wednesday's route included no fewer than thirteen observed hills, but many riders roared up ten of them on top gear, and very few of the climbs reduced the smaller engines to their bottom ratios. The first ascent after breakfast—Whitefield Rocks leading up on to Brendon Hill—was two miles long, but a modern engine does not mind two miles on second gear. There followed twenty miles of narrow, picturesque lanes into Porlock.

Performances on Porlock.

Porlock was in far better condition on Wednesday than we have ever known it. The surface was hard and dry, and, considering that motor coaches descend it daily, few stones abounded. Spectators, numbering several hundred, assembled at the corners to see the procession of riders. Winn (Douglas) led the

however. Ariels, ridden by Newey and Woodcock, made easy ascents, and when a privately-owned Triumph, with a lady on the carrier, went by, it was clear that Porlock had lost its terrors and was unlikely to trouble any machine in really good fettle. But there were failures, of course; for instance, Eckersley (Duzmo) stopped on the first bend presumably with a slipping clutch, and Singer (Rudge sc.) slowed down suddenly at the same place

a clean ascent, and, incidentally, the engine was one of two only which smoked—the decision to measure oil consumption leading to many competitors operating their oil pumps sparingly. The four-speed P. and M.'s all made steady and sure ascents. North deserves special praise for the handling of his diminutive O.K. sidecar, which never faltered on Porlock. Three Martinsyde sidecars indulged in a little T.T. up the hill as they

(Left) H. R. Davies (2½ A.J.S.) and a pair of O.K. Junior riders, A. Milner and W. L. Handley entering Bridge-water.

(Right) A scene on Cotlestone Hill. H. Boynton with his 7 h.p., James and sporting sidecar.

ascended almost side by side. Of the single-cylinder sidecars, Clayton Russell's four-speed Norton was probably fastest. Matchless, James, and A.J.S. sidecar exponents to a man did well. When the light-weights arrived, Wall (Cedros) proved that the Somersetshire terror is no match for 250 c.c. miniatures, but Lidstone (James) footed and then walked alongside, although he kept his engine running. Kershaw (New Imperial) was quite fast. Mason's Connaught made no mistake, and, in fact, all the miniatures, except Merson (Ready) got up well, the latter footing due to a slipping clutch. The solo A.J.S. men, with such a redoubtable string of jockeys, were a star turn.

After Lynton the road was easy but very bumpy as far as lunch at Tiverton. In the afternoon the surface was usually good, but the contours kept undulating, and crowds of spectators were gathered to watch the trial on their local hills. The fast, easy climbing made a great impression, and F. C. North, on the little 2½ h.p. O.K. sidecar, came in for a great deal of applause, for he was the only lightweight sidecarist still running.

way, going well at 9.45 a.m., but after Cathrick (4½ Duunelt) and Vallings, on a similar mount, had gone up comfortably, Winn descended the hill and announced that his gear box had seized. Searle and Padley, on Sheffield-Hendersons, made no mistake, whilst Symes and Nicholson, on Martinsydes, and Strange (James) formed a trio who tonred up within a few yards of one another. Danskin, Ewens, and Sibley (Rudges) demonstrated that they had ample power for hill work, and one noticed that the overhead valve gear has been silenced of late. Sibley was reported stopped higher up the hill,

and repeated the performance. When, however, he traced the trouble to a choked jet, he made a really excellent climb, for which he was duly applauded.

Some men changed up between the two hairpin bends, Morgan, for instance, and Longman (Ariel). The four-cylinder F.N.'s made an excellent impression, climbing steadily and swiftly. The Scotts, too, were admired. Spectators appreciated the fact that the various makes were grouped together in the programme, and the men themselves ran so regularly that on hills the teams went up in a bunch. Foster's Raleigh made

The Six Days Trials Described.—

Lynton was thronged with spectators, who were massed so as to obscure the riders' view of the hairpin, so that Cunningham's P. and M. narrowly missed crashing into the wall of rock on the left. The road was perfectly dry, very hard, and comparatively free from loose stones. A rideable track was obtainable across the full width, except where the drag of the coach had torn a rut.

The 500 c.c. class led the procession on Wednesday. Eckersley, on the Duzmos stopped low down in his first ascent. On making a second attempt at much higher speed he rounded the hairpin comfortably, but failed higher up. The

The 600 c.c. sidecar class had lots of power in hand, and North's tiny O.K. outfit naturally received the ovation of the day. There was something contemptuous in the air with which the 1,100 c.c. combinations swept up—as if a hungry lion should deign to gobble up a mouse.

By this time the non-motoring section of the crowd had become deeply impressed, for only one solitary machine had evinced the least anxiety. Presently the babies began to appear. The New Imperials trotted up nimbly, but Lidstone and Wall were slow, and the former seemed to hop off above the corner. Last of all came the 350 c.c. class, who com-

At Lynmouth the local milkman essayed to climb the hill with two enormous churns in the sidecar of his Triumph. He took the hairpin in fine style, and was loudly cheered. Higher up he conked out, and was immediately cheered again.

The apple crop in Somerset and Devon is simply enormous this year. The early codlins have, of course, been picked, but most of the trees are bending and groaning under tremendous loads of the later sorts.

Marians, of P. and M. fame, and "M.C.C." Baddeley made a star climb of Lynton on a Morris car, and Col. Brereton, one of the judges, went up very nicely on his old G.N., to which he is devoted.

The favourite jibe is to ask Mr. Loughborough whether the trials route was planned by the Touring Department or the Competitions Committee.

Why is the A.C.U. so fond of Taunton as a trials centre? Trouble always

(Left) F. C. North (2½ O.K. sidecar) on Station Hill, Honiton. Incidentally this 292 c.c. sidecar outfit made a remarkably fine performance on Porlock and Lynton.

(Right) E. Searle taking Porlock with confidence on his 4 h.p. Sheffield-Henderson.

two Dunells, ridden by Vallings and Caltinch, were apparently on middle gear. The whole of the rest of the class toyed with the ascent.

Class D (up to 750 c.c.) probably outshone all the other classes. Harveyson's Harley made a beautifully quiet, steady climb, full of obvious confidence. The Ariels were sound. The Scotts purred up smoothly in a bunch, and the F.N. team were probably quieter than anybody else.

Climbs—Spectacular and Otherwise.

Poster, on the Raleigh, got a special cheer because he tried to take a V turn up towards Lynton, and recovered finely when the crowd roared at him to go straight on. Winn (Douglas) passed very late after his gear box trouble at Porlock.

Finch's G.N. was as fast as any bicycle. Watson's G.N. burst its near back tyre just past the Lyndale Hotel, but the driver slid back, and roared up the hill four minutes later with a spare tube in position. The Morgans remembered their petrol consumption, and went up quietly for once, eschewing fireworks. The T.B. was neat and fast

pleted the utter discomfiture of what was once a formidable hill.

There is nothing worth chronicling about the remainder of what was alleged to be the strenuous day of the trial. One hundred and seventy-five miles of rough roads, with a liberal sprinkling of hills, would doubtless have been punishing enough in bad weather; but, thanks to ideal weather conditions, few marks were lost.

NOTES.

The Rev. J. W. Fortnum was standing in the main street at Taunton on Tuesday night with the word "Observer" printed in large letters on his armlet. A working man going home to tea sang out, "Got a paper, guv'nor?" "Sold out!" replied the ready parson.

arises about accommodation. This year many men who had bought official coupons found themselves banished to back street villas over a mile from the official garage. A troop of boy scouts kindly attended to guide the exiles.

Hardee (Matchless sc.) collided with a lorry on Wednesday and damaged his sidecar frame and springs, but he was able to continue.

Nearing Taunton on Wednesday evening some village folk threw apples to the competitors. They got too expert, however, in dropping them in the fleeting sidecars, and a shower on one or two of the passengers startled them not a little.

The Six Days Trials Described.—

Apart from Wednesday's trip, this year's event must be the easiest "Six Days" event yet.

Constant twists and turns among narrow lanes were the feature of the Devon and Somerset section. But for the magnificent scenery competitors were relieved to be clear of that delightful country.

and M. on Honiton Hill), or failed to get his gear lever well home in the gate (as happened to Buckle's F.N. on Brass Knocker Hill). Thunderstorms oscillated over Somersetshire all the afternoon, and certain sidecars contained enough water by tea-time to put up the petrol consumptions quite appreciably. But the ride was an absolute picnic, and the men devoted their surplus energy to economising petrol. The favourite stunt is to

ing their route cards very intently; so, when they found themselves on the Bath tramlines and saw a finger-post with "Two miles to Bath," they eased up. Actually, they still had to make a long *détour*, including the ascent of Brass Knocker Hill—a top gear climb, commencing with a V corner presenting no great difficulty.

During the morning we kept passing and repassing competitors along undulat-

Lynton always attracts a huge crowd of spectators for any motor cycle event, and this occasion was no exception. Here is seen F. S. Spouse's T.B. making an unostentatious ascent.

THURSDAY, 133½ Miles.

Route: Taunton, Hemyock, Dunkerswell, Axminster, Perry Sheet, Crewkerne, Yeovil (lunch), Sherborne, Durweston, Shaftesbury, Warminster, Frome, Radstock, Bath.

To-day's run proved to be another personally-conducted tour over 133 miles of absurdly easy country. The programme indicated that six hills "might" be officially observed, and, of course, all of them were; but, as none of them were steep enough to fetch a three-speeded baby two-stroke off its middle gear, the officials had a sinecure, except when some unfortunate changed up instead of down by mistake (as Lewis did with his P.

free-wheel down every slope, however insignificant; but a few, knowing that their fuel mileage is satisfactory, eschew such stunts. On arrival at Bath, a good many competitors had an unpleasant surprise. The silence marks were posted up, and twenty-eight men were penalised, of whom twelve had previously claimed clean sheets. The judges were very discreet. Twenty marks were allotted for silence; any man losing more than 10%, i.e., two marks, is disqualified for a gold medal. So twenty-three men lost one silence mark apiece. The three Ridges lost two marks each, and two Martinsyde combinations were mulcted in 1.5 mark apiece. The only other excitement of a very dull day was due to pure carelessness. Some of the men were not watch-

ing roads. They roared past us on the up-grades. Their exhausts were abruptly hushed as they topped the crest. Then they slid noiselessly down the reverse slope. Presently we caught them up again on the flat, as they wobbled their front wheels to balance the machine at a mere crawl. Just before they fell off, they let the engine in again, and shot ahead once more. In all seriousness, petrol consumption provided the sole excitement, apart from Porlock and Lynton, on Wednesday afternoon. The Scott trio were averaging about 100 m.p.g. The P. and M. outfits were fitted with solo tanks, which do not hold enough fuel for a hard half-day, so they had special permits to replenish *en route* with the aid of the official cars.

Most of the teams kept together; L. Newey and W. Woodcock (on $3\frac{1}{2}$ h.p. Ariels) are shown.

Very little trouble occurred during the day. Tom Peck damaged his crank case oil union irretrievably in tightening a nut. Lewis on his P. and M. muffed a gear change on Honiton Hill, and Buckle's gear lever slipped out of its notch on Brass Knocker. F. C. North lost his first time marks in the afternoon through a series of misfortunes, the O.K. sidecar having a spotless record up to that point. A plug sooted up, and North promptly inserted the spare which all good motor cyclists keep ready to hand. Presently the spare plug fused its points, and some time was wasted in unearthing another spare. Within a mile the third plug also failed, and everything had to be unpacked again!

Once more it was fortunate for the A.C.U. that the weather held fine. During lunch at Yeovil the official park and replenishment depot were quite de-

A novel watch mounting - on the Cedros machines.

void of cover; and replenishment was a tedious business when every drop of oil and petrol had to be measured by A.C.U. officials and recorded in a book, not to speak of resealing the tanks. Two machines were usually dealt with at a time. There has never been so little "bunching" in a trial, for the system of one minute intervals between riders plus six minute intervals between classes, strings the procession out wonderfully. But, in spite of this, a queue of a dozen machines were usually waiting in the open outside the refilling stations.

Only two machines fell out on Wednesday, which provided a positive ordeal by contrast with the routes of the other four days. It was clear that nearly everybody would earn gold medals unless the speed test at Brooklands proved unexpectedly exacting.

NOTES.

The team work is excellent. The riders of sister machines keep together in clumps, and a stoppage by one member of a team is a signal for the others to stop.

Much of the tank sealing has been very badly done. On many machines it has been possible to unscrew the stoppers without breaking the seals, and on others it was easy to pull the seal off the wire, and replace it. It is a pity that any unscrupulous competitor should be given the chance of stealing a march on others.

A useful fitment on the O.K.'s is a jet control located on the tank to regulate the jet size of the Cox carburetter.

North's tiny O.K. was pulling a pukka touring sidecar. By contrast several far bigger machines are fitted with bautam-weight sidecars, incapable of carrying an adult passenger in comfort, or of holding a real roadster kit.

At lunch on Monday, Mr. Easting, of windscreen fame, presented each competitor with a neat leather cigarette-case, full of Gold Flakes, designed to buckle over a Bowden wire on the handle-bar.

A well-known $3\frac{1}{2}$ h.p. sidecar outfit now having four speeds instead of two—the P. and M.—on the difficult corner of Lynton. Observe the loose surface.

The Six Days Trials Described.—

Tank filling is a long job. Each ounce of oil and petrol is precious, and the men will not have the funnels withdrawn from their tanks till they are bone dry.

A yarn is going the round to the effect that the officials forgot to drain the sump of one machine last Sunday; and that the rider managed to cover the whole of Monday's route on the contents.

FRIDAY, 131 Miles.

Route: Bath, Trowbridge, Edington, West Lavington, Maddington, Amesbury, Castle Hill, Lopcombe Corner, Stockbridge, Winchester (lunch), Bramdean, Petersfield, East Tisted, Alton, Brinsted, Hogsback, Guildford, Ripley, Brooklands.

The last day's road work seemed likely to be damp, for the sky was grey and lowering. Descending Brass Knocker, a long top gear rise led towards Trowbridge and over the plains past Stonehenge; but hill tests were absent. The riders—or, as some people call them in memory of the war, the "P.B.I."—were despatched by 130 miles of devious roads, containing many loose flints and sandy stretches; but the gods were just, and no appreciable rain fell along the trials route. Everybody had grown quite contemptuous about the observed hills, but, after passing Petersfield, Wheatham Hill caused quite a lot of fun. Its second hairpin is quite violent, and the marshals had cunningly trained the spectators to be impassive. So everybody fancied the hill went straight on until they sighted a nasty little trail of blue doubling backwards. The G.N. cycle cars placidly reversed, and then remembered that the regulations said nothing about reversing. Spouse (on the T.B.) was in the same boat, and the

Well-known riders of P. and M. sidecars and members of a winning team—P. Cunningham and G. M. Townsend—passing under a curious natural archway on Salisbury Plain.

crews of these three machines clustered round Loughborough at the finish, much as the Gaiety beauty chorus clusters round Leslie Henson. Sidecars, of course, can wheel round in their own length, but the surprise caused some of the soloists to commit very ungainly work. Wall took his Cedros right on top of the bank, and came off it again in proper Brooklands fashion. The Morgans always use the roadside for helping them round vicious

hairpins, and they "borrowed" nicely, as a golfer would say of his putt. The bigger machines snickered in bottom gear, and managed easily. Of the smaller fry, the New Imperial and Connaught teams, together with the British Standard, were all impressive, as indeed they have been on all the hills. The 2½ h.p. A.J.S. invariably behave like 500 c.c. machines on a gradient—indeed, we doubt if a 750 c.c. could better their smooth mastery of a bad hill. Gifford's Martinsyde had cruel luck on Wheatham—one of its plugs fused a tiny metal thread across the points.

Quite a lot of trouble occurred during the day. Cranch shed the silencer of his Rover, and, as he was riding in close company with other machines, did not miss it for seven miles. When he recovered it, he left his suit case in the

LIGHTWEIGHTS IN THE TRIAL.

The Junior T.T. winner, Eric Williams (2 $\frac{1}{2}$ A.J.S.), makes a neat turn on the Wheatham Hill hairpin.

road, and once more retraced his tracks—this time in vain. As a result, he lost his first reliability marks. Boynton had to change both his plugs just outside Brooklands, after doing all the road work without a misfire. F. C. North had a trying time with the O.K. sidecar, and lost a number of marks. His packet began with changing a back tyre, and the inevitable blind to catch up lost time naturally provoked other petty derangements. This was miserable luck, for the outfit has performed magnificently throughout. He was eighty-six minutes late at Winchester for lunch.

Readers will notice that this report contains far fewer "bouquets" or "mentions in despatches" than usual. It is quite impossible to single out individual riders or machines when the allotted task is so easy that everybody performs it comfortably, and, in addition, the paralysing petrol economy business prevented the men from attempting any speed work on the hills. The general impression made upon the spectators was that practically every machine was toying with its job.

The three Martinsyde sidecars were the first arrivals at Brooklands. Entering by the members' gate, the machines proceeded to the sheds on the top of the hill. Tyre changes were allowed without penalty in view of the next day's speed test, for which most of the boys had held an impromptu rehearsal on the Portsmouth Road. The 250 c.c. and 350 c.c. classes were due to start early on Saturday morning for their speed tests, so that their oil and petrol tanks had to be measured off over night. Riders in the other classes were released until Saturday.

The organisation throughout has been excellent. If some critics complain that the road work has been child's play, it nevertheless approximates very closely to the ordinary riding of the average owner.

NOTES.

Major Dixon Spain is a good map reader. His track-laying Chevrolet only left the route twice, and then merely for one hundred yards or so. The job is no sinecure, for the car started at 5 a.m. daily, and finished about 8 p.m.

Harveyson (Harley) finished the road trial in a grey bowler hat, and one of the Ariels carried the "720" milestone on his back.

According to Loughborough, fewer men were standing for golds on Friday night this year than in the 1920 trial at a similar stage, *i.e.*, immediately before the speed test. This seems incredible; the secret checks must have caught a lot.

Cathrick (on the Dunelt) broke a belt on Wheatham Hill, and afterwards made a clean ascent. Bell (on the F.N.) overran the top hairpin.

On Thursday Pehrson (on the Dunelt) managed to follow the blue track laid for Wednesday, and went miles off the proper route. He caught up his lost time satisfactorily before the secret check, but, of course, nothing could restore his wasted petrol, and his is one of the machines which finds its official ration barely adequate.

F. C. North (2 $\frac{1}{2}$ O.K. sidecar), deservedly one of the most talked of riders in the trial, followed by Graham Oates (2 $\frac{1}{2}$ Edmund), at the top of Wheatham Hill.

The Six Days Trials Described—

SATURDAY. Speed Tests at Brooklands.

250 c.c. solo	-	-	25 laps at 30 m.p.h.
350	"	"	35 "
500	"	"	40 "
750	"	"	42 "
1000	"	"	45 "
600 c.c. sidecars	-	-	32 "
1000	"	"	35 "
Cycle Cars	-	-	36 "

The officials had a harassing day on Saturday. The 250 c.c. and 350 c.c. machines had their tanks drained to complete the measurements of oil and petrol consumption. At 7.45 a.m. these two classes were started on their twenty-five lap speed test (the tabular results of all these final tests appear elsewhere in this issue). As soon as these two classes took the track, the staff tackled the tanks of the next class and so on. In an hour or so the small machines had completed their speed test, and climbed the test hill before undergoing the final examination for condition. After a chilly dawn, the sun shone out in blistering fashion, and the A.C.U. staff must have been very weary men by nightfall.

Lightweights Shine in Speed Test.

Fifteen machines survived from the 250 c.c. and 350 c.c. classes to line up at the fork at 7.45 a.m., and all got away to a good start. The A.J.S. trio are said to be capable of a good 55 m.p.h., but there was no sense in taking risks, and they were content to lap in a clump at about 38 m.p.h. Kershaw, on the 250 c.c. New Imperial-Jap, was audacious enough to lap them by the half distance, and maintained his three-mile lead of the entire field to the finish, heading his stable companions by the same distance.

The speed test was, of course, in no sense a race, but members of each team

usually put their heads down and tried to outshine one another on the last

Only 65 miles to the finish. Nos. 9, 10, 11, and 12 are still riding together—testimony to the reliability of the modern 2½ h.p. lightweight. The riders, who are nearing Winchester, are respectively: J. C. Humphries (2½ Arden), and I. F. Anderson, G. F. Mason, and C. L. Sprosen who formed the Connaught lightweight team.

lap. Anderson had trouble on his second lap, and Handley changed a plug on his fifth round. After the finish, Lidstone (James) failed on the test hill, and Mason (Connaught) struggled to the summit with his petrol turned off. Handley created great excitement by putting his O.K. on its stand right in the centre of the track when a plug needed attention.

Some Unfortunates.

The 500 c.c. and 750 c.c. classes were next on the track, and as the oil consumption was no longer measured, we saw blue exhausts for the first time in the week. Several serious stops marred the speed of the bigger solo machines. Both the Dunells burnt out their carbon brush holders, and Cathrick retired for this cause in his seventh lap. Nicholson (3½ Martinsyde) seized his gear box on his eighth lap. Danskin (3½ Rudge) broke a valve on his fifth lap, and the Duzmo retired after a regular packet of assorted troubles. The oil connection of Newey's Ariel broke away, but he tied it up with a handkerchief. Searle (Henderson) ran out of oil, and Strange (James) punctured. The remainder enjoyed smoother experiences. Foster, on the Raleigh, and Symes on the Martinsyde developed notable speed in the early stages, but Ford's F.N. was the first to complete twenty-five laps (passing Foster near the finish), and was loudly cheered, as something of a gate had collected by this time. He was a lap ahead of Symes, who in turn had lapped the next fastest men. The lame dogs of this class trailed on

In this close formation, the A.J.S. team—which won the 350 c.c. class team prize—rode throughout the twenty-five laps at Brooklands, at a speed of nearly 43 m.p.h. Reading from the left: Eric Williams, H. R. Davies, and N. F. Harris.

Having completed twenty-five laps at speed after the five days road test, competitors had to climb Brooklands test hill before the final examination. W. Moore, who gained a gold medal on his Scott.

Start of the track test for high-powered sidecars. There were only two retirements in this section. Quite an impressive spectacle was provided by the start in this class, as the machines almost covered the width of the track.

for a long time, as everybody who was not more than one hour late each night got a certificate. Vallings finished very late, but the following apparently retired: Cathrick (after seven laps), Searle (twenty laps), Padley (twenty-four laps), Nicholson (eight laps), Danskin (twelve laps), Ewens (twenty-four laps), Featherstonhaugh (twenty-four laps), and Eckersley (thirteen laps).

The 600 c.c. sidecars took the track in company with the cycle cars, not to speak of Graham-Oates on the Edmund, this rider having overslept himself and arrived too late for his class. These two classes strung out very quickly. The Edmund was an easy leader after one lap, with Morgan second, Elce third, Watson's G.N. fourth, and the other Morgan fifth. The fastest sidecar was lying no higher than seventh, and the little O.K. sidecar was naturally half a mile astern, 32 m.p.h. being a formidable pace for such an outfit. Unluckily, North had repeated tyre trouble; otherwise he would just have qualified, for he was lapping (2.717 miles) in about six minutes.

H. F. S. Morgan Miscalculates.

Great excitement arose towards the finish, for Morgan miscalculated his laps, and calmly parked his machine in the paddock when he had still a lap to go. E. B. Ware got out a Ford and went right round the track to find him. Under the circumstances, it was lucky that Morgan had taken his twenty-four laps in very fast time. In Morgan's absence, the T.B. finished first in its class, running very prettily. Elce's Morgan was not far behind, followed by Boddington.

The big sidecars in Class G occupied the full width of the track when they were lined up, with hubs all but touching, in front of the timekeeper's box, and their start was a magnificent spectacle. Considerable rivalry existed, to which the uncertainties of the team prize added fuel, and the leaders set a cracking pace for several laps until prudence reasserted itself. Four Matchless outfits jumped off with a good lead, and O'Brien drove as if his riding orders were to play the hare, whilst his colleagues played the tortoise. Singer had a long stop on his fifth lap,

and Breese needed more oil after fourteen laps; some of the back tyres were stained black by oily exhausts. On the eighteenth lap O'Brien had a stop, and Ellis took the lead, which he held to the finish, he and his passenger contriving to replenish their oil tank as they roared round at speed. It transpired that O'Brien was changing a valve. The positions kept changing in kaleidoscopic fashion, but the stoppages were few and petty, except that Fell-Smith (Brough Superior) broke his back exhaust valve, damaged a cylinder, and had to be towed in.

NOTES.

Rex Mundy made a lightning change of his front exhaust valve immediately before the speed test.

One competitor averaged 2,400 m.p.g. of oil on Monday, Tuesday, Thursday, and Friday. But Wednesday's hills pulled his average down to 1,500 m.p.g.

In the speed test W. F. Scott wore a very neat grey bowler hat, which he had purchased overnight for 1s. 11d. Not to be outdone, Wade and his passenger started their speed test wearing black silk toppers, which they only discarded after eight laps.

Several of the competitors actually cleaned their machines as they rode along. This practice was specially noticeable towards the final cheek on each day.

Late in the week the A.C.U. rang up the London Office of *The Motor Cycle* to enquire if we could furnish thirty-six lap scorers for the speed test. The Martin-syde Co. kindly furnished no fewer than twenty-two of the required number.

The trade teams usually "clumped" in the speed test. The P. and M. sidecars and the G.N. cycle cars were never far

The P. and M. sidecar team—P. Cunningham, G. M. Townsend, and R. Lewis, who rode the new $3\frac{1}{2}$ h.p. four-speed models and qualified for the team prize in Class 7 (600 c.c. sidecars).

G. W. Ravenhall, R. Elliott, and G. Featherstonhaugh, who, on 3 1/2 h.p. Rovers, won the team prize in Class C (500 c.c.).

apart. But the palm must be awarded to Howard Davies, Williams, and Harris, whose three A.J.S. machines lapped abreast, as if they had been dressed by a sergeant in the Guards.

Friday morning's secret check was cunningly located behind a little wood at the far end of the long straight near Stonehenge. Ebbelwhite apparently secured quite a nice little bag.

One rider stopped for a cigarette at the foot of Cothelstone Hill, and turned off his petrol. He forgot to turn it on again, failed on the hill, and wasted a lot of time taking things to pieces. Finally, he discovered his blunder, descended, climbed the hill, and claimed a clean ascent, which was actually allowed.

Competitor No. 1: "How do you feel about the speed test, old man?"

Competitor No. 2: "Na poo. Something is hitting something in my engine, and I don't know what it is!"

To finish the trial without loss of marks, and to complete over twenty-three laps out of the required twenty-five well within time, and then to be put out of the running by a burnt-out carbon brush holder is a piece of real hard luck. This, however, was the fate of Vallings (Dunelt), whose team mate Cathrick suffered from the same trouble in the earlier laps.

This year the A.C.U. programme was not notable for its customary accuracy, the wrong names of test hills frequently misleading local motor cyclists, who took up positions on the wrong hills. Furthermore, our apologies are due to readers who may have been misled by the list of competitors in our last issue having the wrong numbers indicated in several cases. We can only say that the names as well as the numbers were furnished officially by the A.C.U., and for some unaccountable reason were subsequently amended.

ENGLAND v. HOLLAND.

**Trial from Midlands to Brooklands.
Attractive Social Programme arranged for Continental Visitors.**

ON September 26th (Monday) the team of eighteen riders from Holland will compete with a similar team of British riders in the fourth annual Anglo-Dutch Trial; the course is a secret one, between Worcester and Brooklands.

This event is the second post-war trial between the Anglo-Dutch teams, the last year's run being in Holland, and won by the native team. Owing to the nature of the country, the trial in Holland is usually run to split seconds, as there are no hills or other natural obstacles to speak of.

Anglo-Dutch trials date from 1912, the venue and winners being as follows:

Date.	Country.	Winners.
1912	Holland	Dutch team
1913	England	British team
1920	Holland	Dutch team

By winning twice, the N.M.U. Cup became the property of the Dutch team.

This year the trial consists, as before-mentioned, of a reliability run by an indirect and secret course from Worcester to Brooklands. The schedule speed will be 20 m.p.h., and stops in the non-stop sections will be penalised by five marks.

On arrival at Brooklands, the machines will be subjected to a speed test of twelve laps (32.6 miles), which everyone must complete at the following speeds:

275 c.c. solo and 600 c.c. sidecar...	28 m.p.h.
350-500 c.c. solo and 1,100 c.c. sidecar...	35 m.p.h.

Owing to the popularity of big twin solo machines in Holland, it is possible that the Dutch riders will be allowed to use any type of machine instead of providing a set number of each of the specified capacities.

Dutch riders will be distinguished by orange number plates with black figures; the British colours are white on green.

Entertaining the Guests.

The team from Holland is expected on Saturday, September 24th, and will be met at Harwich by the Essex M.C. They will be piloted to Leamington, where they will be entertained to dinner in the Town Hall by the Midland Centre, A.C.U. On the 25th lunch will be taken at Stratford-on-Avon, and Shakespeare's birthplace and other local sights will be visited before the party move to Worcester, where the Dutch riders become the guests of the Worcester M.C.C.

Monday is the day of the trial, and, after the hardships of the day, the visitors will be cared for by the Surbiton and District M.C. and the A.C.U., a dinner being arranged at Thames Ditton. The last day of the Dutch team's stay will include a visit to the J.A.P. engine works, and lunch at the Epping Forest Hotel on the way to Harwich, where they again embark.

The winning A.J.S. team in Class G (1,000 c.c. sidecars). Rex G. Mundy, O. Wade, and F. W. Giles. They all rode consistently, and appeared to find the whole trial a pleasure run.

A.C.U. SIX DAYS TRIALS, 1921.

BROOKLANDS—WEST OF ENGLAND—BROOKLANDS.

PROVISIONAL RESULTS.

89 Starters. 20 Retired. 54 Gold Medals. 6 Silver Medals. 3 Bronze Medals.
5 Certificates. 1 Disqualified.

Basis of Awards: Marks credited at the start, 545, made up as follows—Reliability, 100. Hill-climbing, 100. Braking, 25. Silence, 20. Speed, 100. Petrol consumption, 50. Oil consumption, 50. Condition at finish, 100. Every competitor who has not lost more than 10 per cent. of the marks allotted him under each of the eight tests is awarded a gold medal; if not more than 20 per cent., a silver medal; if not more than 25 per cent., a bronze medal. Certificates are issued to all who complete the Trial.

Rider and Machine.	No. of Cyl.	C.C.	Weight of Machine	MARKS LOST							Marks.		Total.	Award.

TEAM PRIZES.

CLASS A. (250 c.c.).—No award.

CLASS B. (350 c.c.).—(1) A.J.S. riders: N. F. Harris, E. Williams, and H. R. Davies. Total marks, 1,788; (2) Connaught riders: F. A. Anderson, G. F. Mason and C. L. Sprosen. Total marks, 1,668.

CLASS C. (500 c.c.).—(1) Rover riders: R. Elliott, G. Featherstonhaugh, and G. W. Ravenhall. Total marks, 1,788; (2) Ariel riders: F. A. Longman, L. Newey, and W. Woodcock. Total marks, 1,748.

CLASS F. (600 c.c. Sidecars).—P. & M. riders: P. Cunningham, R. Lewis, and G. M. Townsend. Total marks, 1,878.

CLASS G. (1,000 c.c. Sidecars).—(1) A.J.S. riders: F. W. Giles, O. Wade, and R. G. Mundy. Total marks, 1,833; (2) Matchless riders: F. J. Ellis, G. D. Harcey, and R. Croucher. Total marks, 1,878.

BEST PETROL CONSUMPTION IN EACH CLASS.

	m.p.g.
250 c.c. Solo.—L. Horton (New Imperial) ..	127
350 c.c. Solo.—C. L. Sprosen (Connaught) ..	132.5
500 c.c. Solo.—G. Strange (3½ James)	101.6
750 c.c. Solo.—W. Moore (Scott)	98.1
600 c.c. Sidecars.—A. Milner (2½ O.K.)	87.7
1,000 c.c. Sidecars.—N. C. Russell (Norton) ..	77.35
Cycle cars.—H. F. S. Morgan (Morgan)	61.1

B. Kershaw (New Imperial) led his class in both speed and oil economy.

* * *

In most cases where mechanical oil pumps were fitted the machines secured maximum marks on oil consumption.

* * *

One competitor only lost marks under the heading of hill-climbing on Monday, seven on Tuesday, six on Wednesday, four on Thursday, and two on Friday.

* * *

Deviation from schedule. Time errors were made by three riders on Monday, ten on Tuesday, eight on Wednesday, three on Thursday, and three on Friday.

* * *

R. Elliott (Rover) is shown in the above schedule among the certificate awards. This is in accordance with the official list, but it would appear that a loss of marks through running off the course is debited to him. The matter is under consideration. If this penalty is annulled, Elliott will be awarded a gold medal.

THE CLASSES ANALYSED.

	Starters.	Gold.	Silver.	Bronze.	Certificates.	Dis-qualified.	Retired.
A. 250 c.c.	8	3	—	—	1	1	3

H. Cycle cars ..	6	6	—	—	—	—	—
	89	54	6	3	5	1	20

THE SPEED TEST.

BEST PERFORMANCES IN EACH CLASS IN THE 25-LAP SPEED TEST AT BROOKLANDS.

	m.p.h.
250 c.c. Class.—B. Kershaw (New Imperial) ..	44.63
350 c.c. Class.—N. F. Harris (A.J.S.)	42.95
350 c.c. Class.—E. Williams (A.J.S.)	42.95
350 c.c. Class.—H. R. Davies (A.J.S.)	42.95
500 c.c. Class.—A. A. Symes (Martinsyde) ..	49.61
750 c.c. Class.—J. Ford (F.N.)	51.12
600 c.c. Sidecars.—P. Cunningham (P. & M.) ..	34.92
600 c.c. Sidecars.—R. Lewis (P. & M.)	34.92
600 c.c. Sidecars.—G. M. Townsend (P. & M.) ..	34.92
1,000 c.c. Sidecars.—F. J. Ellis (Matchless) ..	46.95
Cycle cars.—H. F. S. Morgan (8 Morgan)	44.03

NOTES ON THE PROVISIONAL RESULTS.

Seventy-five competitors arrived at Brooklands. Sixty-nine survived the track test.

* * *

Four competitors who had comparatively clean sheets, and were qualifying for a gold medal prior to the speed test, retired during this strenuous finale.

* * *

The leaders on marks in the respective classes are the following:

	Total.
250 c.c. solo.—B. Kershaw (2½ New Imperial) ..	577
350 c.c. solo.—G. F. Mason (2½ Connaught) ..	610
500 c.c. solo.—G. Strange (3½ James)	616
750 c.c. solo.—W. Moore (3½ Scott)	631
600 c.c. sidecars.—G. M. Townsend (3½ P. and M.) ..	601
1,000 c.c. sidecars.—R. Croucher (8 Matchless) ..	632
Cycle cars.—H. F. S. Morgan (8 Morgan) ..	627

THE DAILY TOLL.

6 retired on Monday.
5 " Tuesday.
2 " Wednesday.
1 " Thursday.
0 " Friday.
6 " Saturday.

THE BRAKE TEST.

33 lost no marks.
20 " 2 "
12 " 1 mark.
1 " 25 marks.

SILENCE.

28 lost no marks.
23 " 1 mark.

2 " 1.5 "

BEST OIL CONSUMPTION FIGURES IN EACH CLASS.

	m.p.g.
250 c.c. Solo.—B. Kershaw (New Imperial) ..	2,334
350 c.c. Solo.—W. L. Handley (O.K.)	2,920
*500 c.c. Solo.—R. Elliott (Rover)	3,115
750 c.c. Solo.—H. G. Bell (F.N.)	2,920
600 c.c. Sidecars.—G. M. Townsend (P. & M.) ..	1,015
1,000 c.c. Sidecars.—G. D. Harcey (Matchless) ..	1,460
Cycle cars.—H. F. S. Morgan (Morgan)	2,596

*Note.—The official provisional results credit H. Eckersley with having covered the course on a ½ pint which equals 11,680 m.p.g.

Wednesday, the most difficult day of the trial, was responsible for fewer retirements than any day excepting Thursday.

* * *

H. F. S. Morgan's runabout was as economical, so far as oil was concerned, as the best of the 250 c.c. lightweights.

* * *

The first five, irrespective of class, in the speed test were: 1, J. Ford (F.N.), 51.12 m.p.h.; 2, A. A. Symes (3½ Martinsyde), 49.61 m.p.h.; 3, F. J. Ellis (8 Matchless sc.), 46.95 m.p.h.; 4, B. Kershaw (2½ New Imperial), 44.63 m.p.h.; 5, H. F. S. Morgan (8 Morgan), 44.03 m.p.h.

* * *

T. F. Blumfield (6-7 Ariel sc.) proved the reliability of a machine which had not been specially prepared for the trial. On arriving at Brooklands for the start, he collided with a car, which placed his machine *hors de combat*. He returned to the Midlands by road, borrowed a friend's machine, and obtained a gold medal.

CURRENT CHAT (Continued from p. 295).

Obituary.

We regret to announce the death on Wednesday of last week of Mr. A. S. Hill, who founded "The Coventry" Chain Co. in 1896, and was latterly managing director of that flourishing concern.

Appealing!

"Drive slow and see our city.
Drive fast and see our gaol."

Thus, according to a correspondent in the *Liverpool Daily Post*, runs a traffic notice in a Western American city.

Coventry Works Team Trial.

Motor cycle clubs of various Coventry factories are organising a team trial on Saturday, the 24th inst., over a short three-circuit course, totalling from eighty to ninety miles, in the neighbourhood of the City. Teams will be made up of three riders, and a total entry of a hundred is confidently expected.

To-day's Important Event.

Sixty entries, including such well-known names as George Dance, II. Le Vack, F. G. Edmond, and C. P. Wood, have been received for to-day's open speed trials of the Norfolk M.C. and L.C.C., which will be held on West Harling Heath, starting at 1 p.m.

Reverses.

There are several sidecar outfits in this country fitted with reverse gears, the utility of which appears to be confined to providing amusement for friends of the owners. The other evening a member of *The Motor Cycle* staff found a reverse distinctly disconcerting. He runs a large two-stroke outfit. On starting the engine, he failed to observe that it was running in a direction reverse to usual, and only discovered this on engaging the gear. Moral: Two-stroke owners should not start their engines with the ignition too far advanced.

Motoring Novices.

Beginners in motoring are often very quaint in their misuse of technical terms. We recently heard (says *The Autocar*) an old gentleman remark to his chauffeur that the car "seemed very fierce in the exhaust." The same old gentleman would insist on calling the brake lever the magneto. No wonder his car often pinked!

Two-stroke Sidecar on a 1 in 2½ Grade.

Hundreds of people assembled on a recent week-end on the slopes of the well-known Shropshire mountain, the Wrekin, which rises to 1,566ft., to see a 2½ h.p. Velocette three-speed motor cycle, with a Canoelet sidecar and adult passenger, make a non-stop ascent. This was accomplished by G. Denley five times in succession, much to the amazement of many motor cyclists, who had come to see it not done, as the gradient in places is 1 in 2½. Several other Velocette riders went over the top, one with "two up."

CLUB NEWS. (Continued from page 296.)

Moorland M.C.

This club, which has headquarters at Penistone, held its first reliability run on Saturday, the 27th ult. The Stocksbridge and District M.C. and L.C.C. also joined in the event. The successful competitors were: 1, E. H. Fallas (2½ Invicta-Jap); 2, E. Hoyland (2½ Calthorpe-Jap); 3, W. Hoyle (4½ Precision).

Dartford and District M.C.C.

A motor cycle club is being formed in Dartford, and will probably be known as above. There have already been promises of membership from fifty to sixty motor cyclists. Those interested should apply to Mr. B. J. Poirin, c/o Messrs. J. C. Beadle, Spital Street, Dartford.

Westmorland M.C.C.

Early last week the club held a very successful freak hill-climb on a new "find," Sadghyll, an ascent of two miles, varying from 1 in 3 to 1 in 5. It was climbed three times, competitors returning to the foot by a circuitous course of approximately twenty miles. Results, in order of merit, follow:

1, P. Hoggarth (Norton), lost 18 marks; 2, B. Hill (Velocette), 19; 3, J. Baker (Scott), 23; 4, S. Bewsher (Rover); 5, W. Westwood (Triumph), 34; 6, M. Sedgwick (Sunbeam); 1, T. Chaplow (Ariel), 44; 8, S. J. Atkinson (Velocette), 53; 9, J. L. Hall (Velocette), 60.

Shepley and District M.C.

In connection with this club, a very interesting paper-chase was arranged last Thursday evening. The trail was cleverly laid by F. Hey around the New Mill, Thurstonland, Fulstone, and Kirkburton districts. He was eventually "run to earth" about dusk by the club secretary, F. W. Brook, E. Wortley being the second man to arrive.

The next run is on the 11th inst. to Ilkley; meet at Spring Grove, Kirkburton, at 10.30 a.m.

Ayr M.C.C.

Over fifty competitors took part in the hill-climb on Wednesday of last week. Nearly three hundred motor cycles and cars were parked at the starting point, and the spectators numbered over 4,000, including a good number of the fair sex. Two ladies took part in the competition, but were unfortunate in not being amongst the prize winners. The winners were:

CLASS 1 (Sidecars).—1, J. Downs (8 New Imperial sc.); 2, T. Gilchrist (8 Zenith sc.).
CLASS 2 (Under 300 c.c.).—1, C. Henderson (2½ Excelsior); 2, A. Marr (2 Victoria).
CLASS 3 (Under 350 c.c.).—1, W. Allan; 2, W. E. Neill (2 Wooler).
CLASS 4 (Under 600 c.c.).—1, R. P. Lees (3½ Sunbeam); 2, J. E. Allan (4 Triumph).
CLASS 5 (Unlimited).—1, R. P. Lees (3½ Sunbeam); 2, R. Morrison (3½ Norton).
(Triumph), 68; 11, W. Yates (Sunbeam), 76.

Cambridge and County M.C.

Results of the hill-climb held last Thursday were as follows:

NOT EXCEEDING 600 c.c.—1, G. R. Ludlow (3½ Norton), 20s.; 2, H. Robinson, jun. (3½ Sunbeam), 21s.; 3, H. Robinson (3½ Rover), 21s.
NOT EXCEEDING 600 c.c. (private owners).—1, G. R. Ludlow (3½ Norton), 20s.; 2, H. Robinson, jun. (3½ Sunbeam), 20s.; 3, N. Robinson (4 Triumph), 22s.
UNLIMITED SIDECARS.—1, H. Robinson, jun. (3½ Sunbeam sc.), 24s.; 2, W. G. Turner (7 A.J.S. sc.), 33s.; 3, A. Baldwin Hurry (4½ B.S.A. sc.), 44s.

The Motor Cycling Club.

It has already been announced on the entry forms for the sporting trial to be held on the 24th inst. that the start would take place at Purley. However, Mr. E. A. Bridgman, who is in charge of the competition, has found another course which will be covered once before lunch and once after, and he has arranged for the start and finish to take place at the Railway Hotel, Caterham, where lunch will be served at midday, and tea at the finish. Members who have not yet received entry forms can obtain them from 366, Euston Road, London, N.W.1.

Central London M.C.C.

All motor cyclists, whether members of the club or not, are invited to a paper-chase, within easy reach of central London, which the club proposes to hold on October 1st.

WHERE DO WE STAND?

OUR laws are built up on a gradually accumulated stock of rulings and provisions, many of which are necessarily out of date.

The war, with its pressing needs, brought into being a number of laws—swift, precise, concrete, and dealing with affairs of the moment. These laws had universal application. They were made known to all in crisper terms than are the laws of the workaday world at peace. Bulkied together, they comprised the Defence of the Realm Acts, so irksome, so petty, so grandmotherly, but withal

dealing with practical things, and definite to a satisfying degree in what must or must not be done.

With the passing of D.O.R.A., the position of the road-using community, especially as regards the lighting of vehicles, has reverted to its chaotic pre-war state, with some post-war difficulties added.

Thus the law of the land, by no means clear on the points mentioned, may not require rear lights on single track vehicles, may not require forward near-side lights on two-track machines, and

does not require lights on any vehicle until one hour after sunset.

Meanwhile, post-war legislation demands that registration numbers be illuminated half an hour after sunset, and altogether the position is an anomalous one, for no one can put forward definite interpretations, while numbers of local byelaws completely negative some of the above provisions. No universal applications of the law being safe or possible, we are justified in leaving the matter with the question, "Where do we stand?"

The Ideal BOOT

for ALL-WEATHER RIDING
 or for the Field and Garden

Perfectly New, absolutely Waterproof, and easy to slip on and off.
 These boots are of far superior quality, and will give far more
 service than similar articles, of infinitely inferior materials, which
 are offered by other stores at slightly lower prices.

Officers' Field Service

TRENCH BOOTS

Our Price - **30/-**

Postage and packing, 1/6. In Brown or Black.
 All sizes. Guaranteed to be made of the
 finest Government Leather. Sizes from 4 to
 12. Smaller sizes suitable for ladies. These
 boots reach to the knee, and have full length
 tongues and side buckles, which effectively
 prevent any water penetrating through the
 lace holes or over the tops of the boots. The
 uppers are strong and stout, and yet ex-
 tremely soft and pliable. **THE SMARTEST and
 MOST COMFORTABLE Trench Boot procurable.**

55 & 56, Cannon Street, LONDON E.C.4

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/—, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **ILIFFE & SONS Ltd.**, and crossed **& Co.** Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/—; over £75 and under £100, 7/6; and on all transactions over £100, 1/—. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

1921 A.B.C., brand new: £90.—C.S., 14, Swaton Rd., Bow, E.3. Tel.: E3155. [8285]

All letters relating to advertisements should quote the number at the end of each advertisement, and the date of the issue. B1
Motor Cycles advertised by private owners are, when desired, marked (P).

THE HIDE & SEEK SERVICE.

WHEN buying a machine, how accessible everybody is. How promptly your letters are answered.

Later on you call or write again about some little trouble or difficulty to find that all interest in you has evaporated—everybody hides when you seek.

Deal with firms who, like GODFREY'S, believe in continuity of service. GODFREY'S are at all times accessible, and regard a sale as the beginning and not the end of service.

THE LIST PRINTED BELOW COMPRISES ONLY A SMALL PORTION OF OUR LARGE AND REPRESENTATIVE STOCK. IF YOU CANNOT CALL, WRITE FOR COMPLETE LIST. IT CONTAINS SOME EXCEPTIONAL BARGAINS.

We specialise in B.S.A., INDIAN, LEVIS, and SCOTT SPARES.

ABOUT BURLINGTON BARGAINS

WE have at all times a splendid
selection of New and Second-hand
Motor Cycles. This business has been
built up by means of fair dealing and
the sale of reliable machines only. Our
personal interest in a customer goes
beyond the initial sale of a machine—
our expert knowledge is always at his
disposal. We invite you to come and
see us and the goods.

When in trouble about replacements
or some detail of equipment, write to—

ton).

DOUGLAS Machines are our speciality

£65.—4 h.p. Douglas solo machines, new 1920 Amac
carburetter, cables and controls, new Thomson
Bennett mag., new footboards or footrests, brand new
Wood-Milne tyres and tubes, wheels respoled in most
cases, fitted with clutch, kick start, and 3-speed gear
box, the whole stove-enamelled, tank in makers'
colours, and miscellaneous parts replated, mostly
1917-18. Sent on approval against cash.

£78.—The above 4 h.p. Douglas machine, with
Douglas sidcar, the body finished as new, com-
pletely upholstered and repainted.

£45.—2 1/2 h.p. Douglasses, 1916, restored and replated.
Tank makers' colours, new mag., carburetter,
guards, chain, pulley, etc., and miscellaneous other
new parts, which add considerably to the value of the
machine, brand new Wood-Milne tyres and new tubes.
So confident are we in these machines that we agree
to send same on approval against cash; carriage extra.

FROM SEPT. 1st.
OUR RE-CONDITIONED
DOUGLAS
MOTOR CYCLES
are reduced to
55 Guineas

In order to clear the remainder of our stock of approximately

50 Machines.

They are the standard W.D. 2½ h.p. 2-speed machines completely rebuilt.

Practically indistinguishable from new. Over 50% new parts, including new tyres, belt, chain, carburetter, etc. Fully guaranteed for 3 months. Over 500 already supplied to all parts of the country

Supplied with bags, tools, and pump, or completely equipped with lamps and horn, 3 Guineas extra.

Deferred Payments Arranged.
Special Terms to Trade.

A FEW EXTRACTS FROM THE MANY GOOD OPINIONS RECEIVED.

"With reference to the renovated Douglas I obtained from you four months ago, I think you will be interested to hear that I have just returned from a tour of some 500 miles, including a return run Birmingham to Ilfracombe. The total mileage covered since the machine has been in my possession now exceeds 4,000 miles, and I have yet to spend money to put right any mechanical trouble. I have used the machine daily, and my weekly average is about 250. I have not yet decarbonised the machine."

G.W.S., Birmingham.

"The machine was run through Hampshire last week and gave the utmost satisfaction, no adjustments of any kind being required, and still running perfectly. It is a credit to your re-assembling."

G.H.T., Borough, S.E.

Later—"The machine is running better than ever."

"The Douglas (2½ h.p.) I got from you is running Ar. It has quite come up to my expectations, so I am quite satisfied with it."—F.A.T., Barnsley.

"I was recommended to you by a man who has at different times purchased three re-built machines from you which are still running as new. As these machines are used for hire work (one of which I am using at present) and ridden by various people, I think there can be little doubt that machines supplied by you are reliable."—W.T., Folkestone."

SERVICE

TAKE THE KIDDY.

THE "SERVICE" CHILD'S SEAT FOR SIDECARS.

Plated Fittings 47/6.

Enamelled Fittings 43/-

Carriage Paid.

Sound in idea and construction. Simple to fix—does not necessitate cutting sidecar body or mho sie y. Two small platescrew to either side of body (inside). One small plate screw to floor, the seat is collapsible and is instantly removed. When in position it is secure and will accommodate children up to 14 years of age. The fittings are either heavy nickel-plated, or enameled, and are adjustable—so that these seats will fit practically all sidecars. The seat and back are well upholstered and padded. Owing to the special design the space for the adult passenger's feet is not curtailed. Note the low price includes packing and carriage. Sent on approval. The Trade supplied.

289-293, High Holborn, London.

THE MOTOR CYCLE Insurance Policy

Testimony

THIS space will be occupied each week with copies of letters from Policy holders who have made claims. Original letters may be inspected.

Gentlemen,

I thank you for £..... in cheque in payment of transport expenses.

You may be sure that after your very considerate treatment of my case, I shall always recommend your Insurance, with the utmost confidence, to all my friends whom I find in need of such advice.

Yours faithfully,

The only Safe Test of Insurance is Claims. We settle Claims promptly.

**ROBERTSON'S
OFFER A BRAND NEW
SIDECAR
FOR NOTHING**

In order to make room for 100 cases of goods (House Electric Lighting Plants) which we must take delivery of very shortly, we have decided to offer 40 Sidecars at the following specially reduced prices. Each Sidecar will be numbered, as shown on the Invoice. A member of the staff of "THE MOTOR CYCLE" has kindly consented to select, by drawing, one of these numbers. To the purchaser of the Sidecar sold under the number so drawn, we will refund the whole of the amount paid by him. Should the whole of the 40 Sidecars not be sold within a reasonable time, in order not to spin out a settlement unduly, we undertake to refund an amount in equal proportion to the number sold, i.e. if 30 (75%) of the cars only are sold the winner will receive 75% of his money back; if 10 only (25%) are sold, 25% of the purchase price will be returned.

Make and Description.	List Price £ s.	Offered at £ s.

Modernisation.

NEVER before has there been brought to our notice such a number of examples of painstaking modernisation of old machines as during the last six months or so. This is understandable, especially in the case of those owners who possess pre-war mounts, bought at pre-war prices.

But does it pay? It depends upon the viewpoint to which the question refers. Financially, the answer must, all too often, be in the negative; actually and mentally, in the affirmative. For one's very own handiwork, however valueless in a monetary sense, retains a niche in the affections to which the newest and finest purchased article can never reach.

Modernisation of a motor cycle usually presents unforeseen difficulties undreamt of by those who have not attempted the task; but in the conquest of these problems—when and if accomplished—lies the real joy of the work.

Straining the Courtesy of the Road.

RETURNING recently to London from a holiday trip to North Wales, an acquaintance of ours was hailed by two apparently able-bodied and intelligent young men and asked if he would repair a puncture in the rear cover of their lightweight machine; they did not "know much about removing tyres." He complied with the request, but even now, our friend complains, he is not quite sure whether or not he was imposed upon.

This, we are afraid, is not an exceptionally uncommon occurrence on the road nowadays, when the motor cycle is adopted by so many who know little more than the effects of control lever movement. For the motor cycle has passed that stage when it was necessary to have a fairly extensive technical knowledge before venturing far afield. At the same time, punctures, broken belts, and the like are still a source of potential trouble

to all; and we do not think it too much to ask that every rider should be equipped for, and capable of effecting, such minor repairs himself, without straining the unequalled fraternity of the road that at present exists between all good motor cyclists.

The Size of Number-plates.

AN anomalous position with regard to the registration and taxation of motor cycles has existed for some time, and occasionally the fact is brought home to some unwitting rider.

The regulations affecting taxation limit the weight of vehicles of the motor cycle type to 8 cwt.; this ruling came into force on January 1st this year, but so far as registration is concerned, a motor cycle is a vehicle which has less than four wheels and does not exceed 3 cwt.

It will be seen by the first regulation that a motor cycle is clearly defined as a vehicle which does not exceed 8 cwt., while the second regulation seems to be a direct contradiction. The authorities, however, take the view that this is not the case, but affirm that a concession has been made in the first regulation, but the second remains as it was when first introduced in 1903.

Since this is so, it is not surprising that the police are taking action against owners of three-wheeled vehicles which weigh more than 3 cwt. for using motor cycle instead of car size number plates, and this is certainly a matter which our motoring organisations might tackle; a wholesale insistence on the strict letter of the law would involve the owners of existing machines in expense and inconvenience, and seems absurd when one considers that light cars may be run under trade numbers of motor cycle size. These "concessions" are apparently impossible unless they involve a mass of inconsistency, which may easily put the average motor cyclist all unwittingly in the wrong.

OCCASIONAL COMMENTS

by "IXION"

In the lovely district of Brass Knocker Hill, near Bath. Scott riders in the Six Days Trials.

They Must Come.

THE spring frame is by no means as moribund as some authorities imagine. Here are a few sidelights which shone into the office last week, for example. One of our road staff was prevented by a series of misfortunes from accompanying the Six Days on two wheels, as is the rule. He got lifts on a variety of fully-sprung vehicles from the Scott Sociable upwards; and on his return he reported that he had only once previously completed a Six Days without on ache or a pain in his body, the other exception being a year in which he rode a spring frame. Another of our men encountered Mr. Draper (part designer of the W. and D. motor bicycle) at Brooklands, and found him very busy with a new spring frame, embodying shock absorbers. A third member of the staff struck a small workshop near Bath, where another new frame is under development; the last-named probably came nearer the ideal of sheer lateral rigidity than any previous sample, but, owing to limited funds, the inventor is at present confining his energies to conversion jobs.

The Challenger Self-sealing Tube.

FOR six months or so I have run a Challenger tube in the very thin rear cover of my baby two-stroke over very flinty roads, and the incidence of punctures has been reduced from one per week to none per month. Simultaneously a colleague on *The Autocar* staff has been testing a 710 x 90 mm. pattern in a rear wheel of his fast car, and has never had a tyre stop with the wheel in question, though the tread is down to the canvas. Two friends of mine fitted these tubes to their rear wheels for their annual Alpine tour, and for the first time in their experience returned home

without having suffered one puncture in their back wheels. In previous summers they have usually mended a round dozen, for, as the Swiss trials showed, nails are far more prevalent on Continental roads than they are here. Sooner or later one generally strikes some snag in any anti-puncture tube, but I have yet to find a defect in the Challenger, and without committing myself to any rash optimism I intend to specify Challenger tubes on all my 'buses for the present.

A Brake Test.

ACCORDING to the poet, the heart of man is desperately wicked; and I begin to wonder whether we ought not to charter the Big Four from Scotland Yard to assist in running our big trials. A little bird tells me how certain cute spirits managed to emerge from the brake test in the Six Days with every credit. Their rear brakes were all right, but their front brakes were by no means calculated to hold a machine on the test-hill; and their callous employer refused to fit special brakes for the occasion. Ingenuity will always find a way. They adjusted their brakes to the "always on" position. They roughened up the shoes with a tyre rasp. They applied powdered resin in quantities. They chartered kind friends to assist them in the short push to the brow of the test-hill. After the test they restored their brakes to normal; and they wisely refrained from overmuch chaff of those unfortunates who had failed to secure full marks. As an ancient sage remarked, the children of this world are in their generation wiser than the children of light. Nevertheless, the children of this world are occasionally tripped up. One sportsman thought it wise to go through the trial with a fish tail on the tip of his long

Occasional Comments.—

exhaust pipe, and a whole chicken pen of wire netting stuffed into the bore; this was because he did not know Dr. Low by sight, and feared he might not spot him by the roadside in time to shut the throttle. He removed these obstructions prior to the speed test, but, as he drew an inside position at the start, an occupant of the timekeeper's box got ear ache, and vengeance descended.

Why Not Tyre Consumption?

THE A.C.U. turned a sympathetic eye on our riding costs this year when they went to the pains of measuring everybody's oil and fuel consumption through the Six Days. Their neglect of tyre costs is quite illogical. The average rider uses the following value of "consumable stores" in 3,000 miles:

Petrol	£4	10s.
Oil	£1	1s.
Tyres	£5	0s.

It follows that tyre wear interests the ordinary user at least as urgently as his fuel and oil costs. But in the big trials tyres serve the same purpose as the schoolboy's "Please, sir, it wasn't me." If your engine seizes, you wire Mr. Loughborough, "No. 999 retired at Puddleton with tyre trouble." If you are late at a control because your magneto fell off, you roll in with all your spare tubes swathed round your neck, and a few dabs of rubber solution smeared upon your person. Tyres excuse everything, and nobody expects a tyre to go through a Six Days without trouble, though a few of them do. This is all very

well for a trade rider, who gets his tyres for nothing, and who must do all he can to endow his machine with a reputation like Mrs. Julius Caesar—I have forgotten her name. [Calpurnia.—ED.] But if you are a village postman, daily conveying 2 cwt. of mail over twenty miles of rough road on a $3\frac{1}{2}$ h.p. sidecar, and no back tyre will last you longer than 2,000 miles, why! you naturally wonder why the A.C.U. ignores tyre costs. The recording of tyre costs would materially add to the technical data obtained from the trial, and there would be no particular inducement to wangle tyre consumption figures on the part of the drivers.

Makes One Think.

THE usual fleet of cars accompanied the Six Days, ranging from the Dunlop Rolls-Royce down to the humble Chevrolet, which dyed itself with blue woad like the ancient Britons in its efforts to mark the course. To the best of my belief, none of these dozen odd cars were stayed on the road by a puncture. But most of the motor cyclists had punctures—some of them quite a lot. The tiny O.K. sidecarette used two covers, and most of the entry found it judicious to fit a new back tyre for the speed test after a paltry 700 miles on good and easy roads. The moral is obvious. Cars are not undertyred. Their covers are stout enough to defy the insinuating nail and the lacerating flint. But the average motor cycle cover is as vulnerable as my chin would be if I stood up to Georges Carpentier for ten seconds. Obvious remedy—much thicker covers. Obvious difficulty—loss of resilience and general riding discomfort. Obvious solution—the spring frame.

A CHARMING "SIX DAYS" SCENE.
A fine panorama for the top bend of Brass Knocker Hill, which was ascended by competitors on the fourth day. P. W. White (8 Sunbeam sidecar) making light of the hill.

The "6 DAYS"— DEDUCTIONS & IMPRESSIONS

Lessons to be Learned. An Opportunity that Half the Industry Neglected.

MUCH petrol will flow through our carburettors before the keen men have finished discussing the 1921 Six Days. When the village drunkard turns local preacher, no such transformation is recorded as Messrs. Loughborough, Low and Co. have undergone during the last twelve months. In 1920 they staged a regular machine-smasher of a trial. They compounded a prescription in which the Alps and the devastated Somme area were the principal ingredients. They stopped us all on Summer Lodge. They made us sport for gods and men up Park Rash. They caused the sturdy tykes to guffaw by washing out these failures and cutting Rosedale Abbey Bank out of the trial when the procession had nearly reached the foot of that supergully. Their final mood of 1920 was enduring, for it dictated the 1921 course, which consisted of four short joy-rides over flattish roads on Monday, Tuesday, Thursday, and Friday; a hilly tour on Wednesday, which might have been Waterloo for many if rain had fallen in sheets, but was actually less arduous than fifteen of my pleasure runs this season; and on Saturday they subjected the survivors to seventy-five miles of two-thirds throttle on Brooklands bumps. By a perfectly comic series of contretemps, many leading firms abstained, and so robbed themselves of the easiest gold medals which the A.C.U. ever awarded. And now discussion is hot and fierce as to what form the 1922 Six Days should assume.

The Pros.

Let us examine the merits of such a trial first. The machines were subjected to just the kind of test to which nine private owners out of ten put their mounts. There were no freak tasks. Nothing was exaggerated. The trial reproduced with considerable accuracy the riding conditions of private

ownership—easy roads, short distances, moderate speed, and fair weather. Even the concluding speed burst on Brooklands was not excessive; in a year the average commercial machine does a greater distance at similar speeds, with an inexperienced driver up, without special tuning, and often with a far greater load on board (e.g., a pillion flapper, an extra passenger or passengers in the sidecar, a good weight of extra luggage, and over inferior surfaces).

The Propaganda Value.

Secondly, the machines were demonstrated to thousands of potential motor cyclists in the southern counties. They were displayed toying with tasks which are their routine work. The exhibition can have done no harm, and may have done lots of good. All the petty little local hills—mostly top and second gear climbs—were crowded with spectators. Some suppose that these spectators regard their local hills as terrors, and were vastly impressed by the easy climbing. Others hold that the public recognises the real calibre of these hills, and merely selected them as vantage points because nothing better was available. By contrast, the crowds at the 1920 hills consisted chiefly of people who were already motor cyclists, and who came to see acrobatics and obtain thrills; while such non-riders as were present were frightened, or shocked, or disgusted. 1920 was certainly bad propaganda; the quality of the 1921 propaganda is questionable—no sensible man found it impressive.

Thirdly, it is stated with great emphasis that 1921 was the first trial to show the heavy sidecar in its true colours. In most Six Days events, Saturday reveals a shattered battalion in this class. Many of the entries have fallen by the way; and those who survive are alleged to be lashed together with copper wire. This year twenty-three big sidecar outfits

**EASY GOING
IN THE SIX
DAYS.**

(Top) F. S. Spouse (8 T.B.) followed by P. Cunningham (3½ P. & M. sidecar) in the village of Stockbridge. Both gained gold medals.

(Centre) W. A. Fell-Smith (8 Brough Superior sidecar) and F. J. Watson (5 Ariel sidecar) on the easy route of the first day's run. The latter gained a gold medal.

(Bottom) R. C. Winn (3½ Douglas) near Bidmore Hut.

not do, and what nobody outside the A.C.U. Competitions Committee ever wanted them to do.

Finally, it is urged, the ordinary buyer spends a lot of hard-earned cash on oil and petrol. Manufacturers are proverbially callous about these two items of expenditure. Therefore the A.C.U. displayed genuine sympathy with the common man in devoting enormous pains to registering the fuel and oil consumption.

The Cons.

Now let us look at the other side of the medal. The biggest blunder behind the outcry against goat tracks in 1920 and behind the novelties of the 1921 policy is that the A.C.U. has suddenly become parochial.

It has forgotten the British Empire. What possible value has last week's event to a buyer who resides in Australia or South Africa or Canada? Of course, if we despair of ever supplying our sons abroad with motor

were entered. One driver fell sick, another hit a lorry; and twenty-one arrived, intact and resplendent, at Brooklands. According to the enthusiast this is as it ought to be. The man who pays £200 or more for a big sidecar outfit does not bang it at Summer Lodge; he is not such a fool. He treats it, as his wife treats her second-best teapot, *i.e.*, he keeps it clean, and uses it with discretion. The sidecar entries were handled after this fashion for the first time in 1921, and they triumphantly showed what they could do; previous trials have only shown what they could

The Six Days Deductions and Impressions.—

cycles designed and built "at home," this criticism falls to the ground. But if we still hope to capture the overseas trade, we must develop motor cycles suitable for overseas conditions; and gentle ambles along the Portsmouth Road and similar highways will never do that.

Too Easy.

Secondly, the 1921 trial fails in its main purpose, which is to separate the sheep from the goats. The allotted task was so easy that almost any old 'bus could, and should, have earned a gold medal.

Most of the arguments put forward in praise of an easy trial are boomerangs, and return to wound the thrower. Grant that the trials reproduced ordinary riding conditions; but was the machine an ordinary machine, and was the rider an ordinary rider? You are dealing with picked riders and specially "readied" machines; you can only cancel these special factors by imposing a stiff task. Propaganda work? You do not demonstrate a razor by sharpening pencils with it. It is an insult to the modern motor cycle to pretend that Monday, Tuesday, Thursday, and Saturday tested its capacity in any real sense.

Perhaps the less said about the consumption tests the better. The idea was sound to the core. Very few roadster machines do a hundred miles on a gallon of petrol; very few do 2,000 miles on a gallon of oil. Both these figures might be standard. The A.C.U. desires to make them so. Let us back it up. But there were too many loopholes for camouflage this year. The officials took an infinity of pains, and subjected the competitors to a lot of fiddling replenishment business; but the resulting data are—I am sorry to say it—of no particular value. The first discount must be made for special tuning; some firms went so far as to jettison their intended carburettors in the interests of low consumption. The second discount must be made for riding methods. We all know how experts ride in a consumption trial; many men rode in that fashion over long patches of the road routes—they free-wheeled down grades at speed, and did not restart their engines until the machines were wobbling ready to fall over. The third discount must be made on the score of insufficient safeguards. Some of the sealing was futile. The seals could be pulled off and replaced after a secret replenishment. In other cases the stoppers could be opened without disturbing the seals at all. On quite a number of machines it was possible to introduce fresh supplies by methods which the official imagination had never foreseen, and did not cope with. If no rider availed himself of any of these facilities, the case is not altered. We cannot trust these records, either in the mass or in detail. Untrustworthy records are of very limited value. I suggest that another year the consumption tests should be incorporated in the track test. A few experiments with stock machines would show that Brooklands speed in each class entails the same consumption as an ordinary road tour at, say, 25 m.p.h. average. Such a method would relieve the officials of much useless labour, free the riders from irritating delays and routine, and whatever results were obtained would be above suspicion.

It will be gathered from the foregoing analysis of facts and arguments that I regard the 1921 Trial as unpardonably easy, and hope that the 1922 event will consist of "six Wednesdays," and that the weather will be uniformly bad. I ought to add that I am very sorry for the A.C.U. This sounds rather like "Do not shoot the pianist, he is doing his best." But nobody is independent in this world, and the A.C.U. is not strong enough to dictate to the trade or even to the professional riders who compose the bulk of a Six Days entry. It can only derive strength from the general mass of motor cyclists, who are actually a somewhat silent and lethargic body. They leave their chosen delegates on the A.C.U. Committee to play a lone hand against powerful vested interests, and the Committee occasionally loses heart. It lost heart this year, and the fine weather was grossly unkind; if Wednesday had been the third of three wet days, instead of the umpteenth of umpteenth fine days, the trial would not have been half so soft. Next year the pendulum will swing the other way. The trade are quite cute enough to see that an easy trial, which furnishes our best machines with no more credit than is earned by the Bugmobike, of which only three have ever been constructed, is of little use to anybody. Those obstreperous trade influences which smoothed down the 1921 event will be clamouring for something stiff, yet sane, next year. Public opinion will push in the same direction. The A.C.U. learnt in 1920 that it must not overdo the "colonial" stunt. After its 1921 experience, it will not be likely to underdo it.

Overwhelming Entries Not Desirable.

Taking the policy for granted, the administration of the Trial reflects great credit upon the officials. The event is an enormous business, and its cost runs into thousands of pounds. The only obvious blunders were the inefficiency of the tank sealing and the holding of the brake test on the first day instead of the last. For the rest, everything was beautifully organised. The next time tanks have to be sealed, the staff will be very wide awake; and it was admittedly difficult to squeeze the brake test into a very busy Saturday. Accommodation presented great problems, and some of the men grumbled at having to share beds with strangers in houses which were little more than cottages and situated considerable distances from the official garage. Under the circumstances it is well that the expected entry of 150 did not materialise, owing to the trade opposition.

If oil and petrol costs are to enter into a trial, is it logical to ignore tyres, which probably cost the average rider quite as much as his petrol? Any penalisation of tyre repairs and replacements would have instant results. It would induce manufacturers to try out the various puncture-preventives and nail-catchers, as well as to adopt thicker covers, which in turn might lead to better springing of forks and frames.

It is questionable whether the system of having two fixed checks per day (lunch and night stops), and not more than two movable or surprise checks (one in the morning and one in the afternoon), is as effective as the old system of having a timing station at least every twenty miles. The new system gives a rider who meets trouble a better chance of dodging all penalties.

MATCHLESS.

MILLFORD.

REX.

FEAR and trembling characterise the attitude in which one approaches the subject specified in this title.

Only in the matter of tyre and rim sizes is there so much lack of unanimity and demonstration of the workings of the illogical mind; and when, in addition to this, we run up against flagrant negations of accepted mechanical practice, the pen is taken up in the spiritless fashion of one who knows the meaning of the phrase regarding the stepping in of fools where the angels fear to tread.

Throughout the whole of the sidecar trade there seems to be an entire lack of any definite tendency; one manufacturer will adopt a more or less "ideal" straight-tube triangulated system, while another will purposely bend every one of his connecting tubes. The former looks askance at the product of the latter, dubbing it "unscientific," while the latter justifies his curved tubes by saying that they eliminate breakages, thanks to the spring and "whip" which they permit.

It is just on such everyday points that practice and theory often part company; there are many sidecars connected to machines by what, to the mechanical mind, are masses of comforted tubing applied in an unthinking manner; yet, strange to say, some of these are amongst the most successful on the road, and give a minimum of trouble, and are the cause of no serious frame breakages.

On the other hand, a rigid chassis, rigidly applied to the machine, may cause frame breakages in the latter, even though the chassis itself may remain in perfect order, and it seems, therefore, that the ideal is reached, so far as rigid-framed machines are concerned, if a certain amount of flexibility is permitted between the cycle frame and the sidecar chassis.

Where spring-framed machines are used, however, or where a spring wheel sidecar is fitted on a rigid machine, the connections need to be stiff and strong.

Flexibility may be obtained in a variety of ways; the connections themselves may be of some form incorporating springs, buffers or hinge joints, or they may be of tubes so curved that the usual stresses encountered tend to increase the curvature. In such a case it is essential that the tubing used be of the very best quality with a higher elastic limit than is usually used

in frame construction. A further help to the securing of a desirable amount of flexibility is the use of three connections only, thus avoiding torsional stresses on the sidecar chassis and cycle frame as far as possible; where a fourth point of attachment is introduced it should spring from the same point on the chassis as the connection which it supplements and terminate on the cycle frame in such a way as to form a triangle composed of (1) normal attachment; (2) cycle frame tube; and (3) fourth attachment; thus gaining the advantage of "four-point attachment" while retaining the flexibility derived from a three-point support.

In the matter of diagonal stays (*i.e.*, the connections which pass from sidecar axle to the upper part of cycle frame, locating the

Sidecar Attachments—

SCOTT.

latter in the vertical position) the ideal of a straight tube from the sidecar stub axle to the motor cycle seat post is seldom attained; indeed, actual practice has not shown it to be necessary and dropped axles and underslung bodies make it virtually impossible. Some designers have made efforts to keep as near the ideal as they can by carrying the diagonal stay in a long sweep from axle to seat lug—a deplorable waste of good tubing, since the stay can bend and will probably take a permanent set, resulting in the cycle leaning in. A much better job is made by taking a straight seat post stay from the axle, at a point as near to the body as possible. In this construction the axle tube, or cross member of the chassis (usually duplicated) becomes a beam possessing the characteristics of a cantilever, the loaded and supported ends of which are constantly changing places (except when traveling in a straight line on a practically uncambered road); in conjunction with the axle tube, the diagonal member forms an assembly having no tendency to permanent distortion, while, if the actual construction of the axle portion is of the correct design and material, an inherent flexibility in this portion of the chassis will be by no means an undesirable feature.

U.A.C.

SHEFFIELD-HENDERSON

CANOELET

One other detail may be criticised in the light of long experience with all types of sidecars; in many cases considerable pains have been taken to secure a certain amount of flexibility in the couplings, and yet the joint between sidecar axle and cycle fork-end is quite incapable of movement in a vertical plane. Examination of most sidecars will show a slight tendency to movement at this point and a perfectly rigid (vertically) connection here is not wanted; its presence may result in the breakage of the fork-end or chain stay. Where joints of the usual yoke and spigot variety are employed the jaws of the yoke should be arranged to take the spigot vertically and, preferably, should not be locked tightly with the yoke-end bolt. Chain-stay attachments clipped (not too tightly) to a round section tube are infinitely preferable to a rigid connection brazed or screwed horizontally into the cycle fork-end, for the latter is a potential source of

frame trouble. Yet, with extraordinary perversity, those who are responsible for the production of sidecar machines are so imbued with the fetish of integral

sidecar attachments that they frequently overlook the stresses involved and the most suitable method of mitigating their ill-effect.

WHARFEDALE.

AN EMPIRE, NOT AN ISLAND.

ONE of our contributors criticises the 1921 Six Days on the ground that it was too easy to develop a machine suitable for overseas work. In this connection, a letter just to hand from a tea-planter in India is to the point. He rides a 1913 Douglas, and, during the rains, he has to lay it up altogether. In the fine weather, his daily going is of the Park Rash type, for there is not a made road within thirty miles of his place. A legal limit average

is his ideal rather than his attainment, for mud-holes—dry or wet—compel him to dismount quite frequently; and every few hundred yards there is a bridge composed of a bamboo mat laid across poles; the poles settle, the matting sags, and, if the bridge does not go west altogether, the surface resembles a hammock. He is of the opinion that he could come home and earn a gold medal at the first essay in any freak trial over British roads.

IXION.

More Opinions on the Withdrawal of our Classic Races from their Time-honoured Course in the Isle of Man.

NOT only here, in the Isle of Man, and in Belgium is the A.C.U. decision to hold the 1922 T.T. Races at Spa arousing comment. In France, for instance, some followers of the sport ask why that country was not selected, and the opinion of the editor of *Mécano*, one of our French contemporaries, is worthy of comment. To him it is naturally a matter of sincere regret that, after the Auto Cycle Union had decided to abandon the Isle of Man, they did not at once turn to France, which is as accessible as, if not more so than, Belgium, and he gives a good reason as to why they did not do so, namely, that the Belgians were the first to offer their country for the race, and that is why it was chosen. Probably he is right, but he goes on to say: "It is perhaps a feeling of systematic disparagement which had caused preference to be given to Belgium. There has recently been a great tendency for Englishmen to run down French motor cycles and to consider them as bad imitations of their own. The exploits of French machines and the popularity they have enjoyed has proved the contrary to be the case, but people have none the less been only too happy on the other side of the Channel to blaze abroad the English victories at Le Mans and Francorchamps. If the T.T. were to be run in France next year, would it not create and foster competition which is already too keen and should be avoided at all costs? Yesterday it was only the tariffs protecting British industries; to-day there is as well the choice of a Belgian course, which oppose our interests and show the feelings the British cherish towards us. But what does it matter? We can succeed alone, even if they do not wish to bring a foreign event to our shores; and the task falls on the shoulders of the leaders of the French motor cycle industry of proving how much our trade is in a position to do."

Who Selected the New T.T. Course?

We hasten to assure our French critic that no such feelings exist in Great Britain towards the French motor cycle industry, and it is purely owing to the enterprise of the Belgian people that a course was chosen in that country.

The credit (if credit is due!) for the selection of the T.T. course in Belgium can be given entirely to one who has followed the races in the Isle of Man with close personal interest.

According to our Belgian contemporary, *La Moto-cycllette*, it appears that M. Paul Kelecom, chief designer at the F.N. factory, placed the matter before a recent committee meeting of the Fédération Moto-cycliste Belge, where it was received with enthusiasm, with the result that M. Kelecom at once communicated the decision of his colleagues to the Auto Cycle Union, and, on the arrival of Mr. Loughborough at Spa on the occasion of the Belgian Grand Prix, M. Kelecom was prepared with a blue print of the course and took him round it on the same afternoon that the race was held.

Below are given a selection from the many letters which we have received from readers; they have been chosen as typical of the various shades of opinion held on the subject.

Pros and Cons aptly put.

Sir,—On learning the decision of the A.C.U. to hold the T.T. races in Belgium, two main factors present themselves before us, viz.:

- (a) Suitability of course.
- (b) Money laid out and business accruing.

With regard to (a), the Belgian course offers long straight stretches at a high speed. The I.O.M. course does not; but both courses offer sudden acceleration and braking tests. Also, because of the car races, the T.T., if held in the Island, would be at an awkward time. Therefore the Belgian course gains one point. As to accessibility, the Belgian course is undoubtedly more get-at-able to foreigners and Londoners, but for the Midlands and north-country people the Island is easier. Now, seeing that one north-country Britisher equals six foreigners of any nation, this point is halved.

(b.) In these times the amount of money spent out of the country is a strong factor to be taken into consideration. But it is a speculation, and a good one, because we will conquer the foreign markets, and probably bring into the country double the amount spent out. The Belgian course here gains another point.

If one adds up the points, the odds are in favour of Belgium, but there is an extra which also favours the Belgian course, and of which few people have thought. It would be possible to organise in Belgium, where it is impossible in the I.O.M., a big twin race that would give us the opportunity of bringing out the British 1,000 c.c. 'bus.

Nevertheless, in spite of all this, I am going to watch the car races in the I.O.M. next year. It costs less.

New Brighton.

MERSEY.

A Well-considered Letter from the I.O.M.

Sir,—The arguments in favour of the change appear to be as follows:

- (a) Advantage to the British export trade;
- (b) International attention will be attracted;

On Holding the T.T. Abroad.—

(c) The bigger engine will have a chance to exert its speed and power; and

(d) Petty annoyances will be avoided.

I will deal with each of the points in turn.

At the present time three trials at least are held on the Continent which attract world-wide attention, namely, the French Grand Prix, the Belgian Grand Prix, and the International Six Days. One would think that the way to foster and encourage our export trade would be for the English manufacturers to compete in these events, show their worth, and the results will surely follow. The authorities who organise these races are killing "the goose that lays the golden eggs" by removing the venue from the British Isles, for they must bear in mind that they are taking it out of reach of the majority of the British public, and it is the British public to which both the A.C.U. and the trade owe their existence.

The point of International attention I view as mere camouflage, as the races, as held last year and for many previous years, were a topic of universal discussion. When our foreign rivals feel that they can place on the market a machine of the same standard of efficiency as many of the British machines they will give attention to the T.T. held in the British Isles.

Let us now go into the facts relating to the engines. Mr. C. Williams informs us that it is possible to ride the I.O.M. course at 60 m.p.h. The 2½ h.p. A.J.S. average speed in the last T.T. was 54.49 m.p.h., whilst the average speed of the 3½ h.p. Norton on the Belgian course was 56.91 m.p.h.—precisely 2.42 m.p.h. faster. So we see that the argument as to the greater speed falls to the ground, as the new course, with perhaps only three acute bends, in comparison with the I.O.M. course with its numerous corners and mountain climb, only allows an increase of speed of 2.42 m.p.h. over that attained by the machine with the smaller engine in the I.O.M.

I do not propose to go into the matter of annoyances, as I understand they are being, or will be, dealt with elsewhere in your columns.

T.T. stands for Tourist Trophy, and one would think that the A.C.U., in organising and promoting these races, was endeavouring to produce a machine suitable for the man in the street. The motor cyclist of England to-day not only wants speed, but also reliability. He must have confidence in his gears, transmission, brakes, and frame, and no hill must deter him. To evolve a machine with these qualities it must have a thorough test, and it is only a course similar to that found in the Isle of Man that can provide it. As one of your correspondents observes, "there is no comparison between the courses."

It is to be hoped that when the matter comes before the General Committee of the A.C.U. it will be fully discussed, and the real reasons discovered for this astonishing decision, and published to the members of the A.C.U. and the motoring public, so that they can consider them.

I would urge strongly every motor cycle club in the British Isles to oppose Britain's only road race being removed to a foreign country.

Being a resident in the I.O.M., I have endeavoured to omit reference to the undoubted advantages accruing to the Island, and have only dealt with the subject as a motor cyclist.

J. H. L. COWIN.

Taking it as a Holiday.

Sir,—The 1921 T.T. was the first I had ever witnessed, and I am more than enthusiastic about it; so much so, in fact, that I do not intend to miss another if I can help it. You see, therefore, that I am sufficiently keen and interested to make a special journey to see it.

Speaking entirely from my own (rather selfish) point of view, then, I have a fortnight's holiday each year, and in future shall reckon to spend it, or most of it, at the T.T. races. Consequently, I see hardly any other part of the country (metaphorically speaking, of course) except the route to and from the Isle of Man. In 1922, with luck, I am going either to Harwich or to one of the South Coast ports, then across Belgium to Spa—quite a nice little trip—and see the T.T. at the end of it.

On the other hand, if I take my bicycle across, I gather I have to keep to the "wrong" side of the road, obtain passports, pass the Customs officials, etc. But what about the Isle of Man? By the time I had filled in my form

(name, number, rank, religion, etc.), paid my 10s., and got the licence stuck in my holder, I was about fed up with it.

Still, the very letters I.O.M. seem to stand for motor cycle racing, and although I only toured round the course on a 2½ h.p. Douglas, it struck me as being absolutely magnificent (though I certainly thought the surface of the road was too loose in many parts).

Will the Belgian course be like this, only including more fast straight stretches if possible? If so, I am all for it. If not, the T.T. will be ruined—I mean it will become the Manx mountain course without Ballig Bridge, Ramsey hairpin, the "Gooseneck," and Hillberry Corner—positively unthinkable.

To finish, I am looking forward more than ever to the 1922 Tourist Trophy races, and shall be more than contented to journey anywhere to see them so long as the course resembles the Isle of Man.

DOUGLAS.

King's Lynn.

Private Owners' Race Wanted.

Sir,—As a private owner and visitor to the Isle of Man T.T. races, may I suggest that if Belgium is the site of the 1922 T.T., why not have a secondary edition for the Island—a sporting gallop for private owners?

OGWIN LEWIS.

A Common View in the North.

Sir,—From the reports you have published about the new course, it looks as though it will be faster and safer than the Isle of Man, but I do not think the machines will have to undergo the severe braking strains and violent acceleration as the Isle of Man course demands.

Regarding your remarks about easy to reach the new course, I think it is hard for the North of England man. With the T.T. held in the Isle of Man it is possible to go over Monday midnight, see the Junior race, and back again to the mainland Tuesday midnight, and doing a similar journey for the Senior race. If the races are held in Belgium it will mean a week away from business for ten hours racing.

I should favour the Belgian venue on account of the people, for, during the 1920 and 1921 races I ran up against lots of incivility, and also irritating ways such as paying 1s. to cross a field during the race and £5 for a taxi to Craig-na-Baa to see one race. It is this sort of thing that keeps people away from an event. As regards the cost of taking a machine over to the Island, well—once bitten, twice shy.

W. BANCROFT,

Hon. Sec. Accrington and District M.C.C.

Big Twins, Past Records, and Date Discussed.

Sir,—As an interested private owner and possible competitor in the 1922 T.T., I should like to give my opinion on the proposed change to a Belgian course.

We saw this year that the 500 c.c. machine has little or no advantage over the 350 c.c. on the Isle of Man course, while the 1,000 c.c. gets no chance at all.

Apparently, on the Belgian course, the extra power of the 500 c.c. can show its worth, and perhaps it would be possible to let George Brough give the Americans a run for their money in 80 m.p.h. laps.

I have never seen the Belgian course, but I gather it is far from flat and tests the brakes, etc., almost as much as the I.O.M., while the higher speeds obtained will surely put a greater test on reliability than ever.

With regard to the money taken out of England, the matter lies entirely in England's hands, and when it brings the motor laws up to date the A.C.U. will find a course on the mainland of Britain.

In accessibility the two courses are about the same, the passport trouble counteracting better steamer services, etc.

Once on the Continent, however, the courtesy of the police and officials will be a revelation to those who usually take their machines to the Isle of Man, and the Continent gives unlimited scope to the tourist, whereas the Island can be explored in a day or so.

The disadvantage, to my mind, is that all the Isle of Man records are wasted, and it will be a few years before the public realise that a lap of the new course at x or y m.p.h. is equivalent to one in the Isle of Man at 60 m.p.h. or 40 m.p.h.

Lastly, why must the race be run at the end of June? This is just when the University year is ending and the important examinations are on. All students are prevented from competing, and probably from seeing the race.

Fife.

UNIVERSITY.

The Anglo-Dutch Trial.

Constitution of the British Team and Details of the Visitors' Programme in England.

AS stated in our last issue, the programme for the entertainment of the visitors from Holland, who are coming over in connection with the Anglo-Dutch Trial on September 26th, is complete.

On Saturday, September 24th, the Dutch team will be met at Harwich and entertained to breakfast by the Essex M.C. They will then ride to Leamington, being escorted by club- of the Eastern Centre, A.C.U. At Towcester the party will meet representatives of the Midland Centre, who will then act as guides. A dinner in the evening, in the Town Hall, Leamington, will be given by the Midland Centre.

A Full Programme.

The next day will be occupied in a visit to Stratford-on-Avon and a run to Worcester, where entertainment will be provided by the Western Centre.

At eight o'clock on Monday morning the trial from Worcester to Brooklands takes place over a secret route, lunch being taken at Reading. The trial concludes with a speed test on Brooklands.

The British team will consist of the following:

CLASS I.—350 c.c.

PRIVATE OWNERS:

D. A. Atkin (2½ Hobarth).
E. A. Edwards (2½ Douglas).
O. Hayes (2½ A.J.S.).

TRADE:

K. Don (2½ A.J.S.).
W. B. Gibb (2½ Douglas).
H. Gibson (2½ Raleigh).

RESERVES:

A. G. Wall (2½ Cedros).
A. N. Oother (—).
H. R. Davies (2½ A.J.S.).
B. Kershaw (2½ New Imperial).

CLASS II.—500 c.c.

PRIVATE OWNERS:

F. Dover (3½ Triumph).
F. A. Hardy (3½ Zenith-Bradshaw).
G. Smith (3½ Sunbeam).

TRADE:

F. A. Applebre (3½ Scott Squirrel).
J. Moffat (3½ Douglas).
L. Newey (3½ Ariel).

RESERVES:

R. A. Green (3½ Norton).
J. Whalley (3½ Sunbeam).
G. Dance (3½ Sunbeam).
L. L. Sealey (3½ B.S.A.).

CLASS III.—1,000 c.c. Sidecars.

PRIVATE OWNERS:

R. Charlesworth (8 Zenith sc.).
J. A. Newman (7 A.J.S. sc.).
G. Nott (8 Matchless sc.).

TRADE:

H. Boynton (4 James sc.).
W. Pratt (8 Matchless sc.).
E. B. Ware (8 Matchless sc.).

RESERVES:

F. S. Ellis (8 Matchless sc.).
W. A. Fell-Smith (8 Brough Superior sc.).
F. Crosthwaite (3½ Duzmo sc.).
S. Wright (4½ Humber sc.).

Unfortunately, the constitution of the Dutch team cannot yet be announced, as, owing to the difficulty of finding suffi-

cient riders of 350 c.c. and 500 c.c. solo machines (big twins being the favourite mounts in Holland), the rules have had to be revised. The Dutch team will, therefore, be classified as last year, i.e., six machines under 350 c.c., and the remaining twelve of any capacity. The sub-classes of private and trade riders in the Dutch team have also been eliminated, but only genuine private owners will be eligible for the special prizes.

Routes.

The route to be followed by the Dutch competitors from Harwich is as follows: Harwich, Colchester, Bishop's Stortford, Hertford, St. Albans, Dunstable, Fenny Stratford, Towcester, Daventry, Southam, and Leamington.

On the Sunday the route will be: Leamington, Warwick, Stratford, Alcester, Dunnington, Spetchley, and Worcester.

After the trial on Monday (the 26th), the competitors will become the guests of the A.C.U. and the Surbiton M.C.C., a dinner being given at Thames Ditton.

On Tuesday the Dutch team returns from the last-mentioned place, via Kingston, Clapham, Kennington, Tottenham, Woodford, Ongar, Chelmsford, Colchester, and Manningtree to Harwich. They will visit the J.A.P. works at Tottenham, and will be entertained to lunch at Chingford by Messrs. J. A. Prestwich, Ltd.

Dynamo Driving from the Road Wheel.

A DIFFICULTY often experienced in equipping machines with dynamo lighting is the arrangement of a suitable drive to the generator, if such a fitting has not already been provided for in the original layout by the designer of the power unit.

An Easily Applied System of Running a Lighting Generator on Existing Machines.

Flexible shaft and speedometer type gearing on the back wheel for the drive of a dynamo lighting set.

In many cases it is impossible to attach a driving pulley or sprocket to any exposed rotating member of engine or transmission units, since all is completely enclosed; and to meet this difficulty the Wattalite dynamo and transmission, by means of flexible shaft and gearing from the back wheel, has been evolved, and it appears to be quite practical.

A gear wheel is attached to the spokes of the rear wheel, while the pinion on the flexible shaft is attached to the offside rear fork of the machine. The wheels are enclosed, so that the drive is adequately protected from mud and grit, and

the actual dynamo is driven by means of a speedometer pattern cable having an ample margin of strength. The generator, which is designed to give an output of 16 watts (4 volts 4 amps.), is situated on the top tube.

A switchboard can be fitted to the handle-bar, to the top of the tank, or on the connecting bar between the motor cycle and sidecar, when the latter is fitted.

The Wattalite generator is made by Messrs. Watts, Williams, and Co., Ltd., Leysfield Road Works, Shepherd's Bush, London, W.12.

Top tube mounting of the rear wheel-driven Wattalite dynamo; switch gear and charging meter are mounted on the handle-bars.

**Scarborough and District M.C.**

Speed trials will be held on the Albert Drive on the 24th inst., for which prizes to the value of £100 will be awarded.

Bristol M.C.C.

Starting at midnight to-morrow, the club is holding a twenty-four-hour trial in Wales for the Hutchinson Cup.

Northants M.C. and L.C.C.

This club is holding its annual speed trials in Castle Ashby Park on the 22nd inst. Ten classes are included, starting from 275 c.c. solo to unlimited cars. Entrance fee for each class is 5s., which should be sent to Mr. J. E. Capell, 8, St. George's Avenue, Northampton, not later than Monday next.

Levis Athletic Club (Motor Section).

Regulations and entry forms for the "single gear" trial for the Yardley Cup, to be held on the 24th inst., are now available from the secretary, Mr. W. S. Banner, Levis Works, Stechford, Birmingham. Honorary membership of the club costs 4s., and, as already stated in *The Motor Cycle*, the event is open to any make of direct belt drive machine (variable pulleys must be sealed in one position).

Worcester and District M.C.C.

There will be special classes for purely private owners at the closed hill-climb to be held on the 24th inst., the entrant with a standard machine having every chance to win an award.

Falmouth and District M.C. and L.C.C.

The first hill-climbing test under the auspices of the above organisation was held on Monday of last week. A large number of the general public were present, and keen interest was manifested. The fastest time was achieved by N. J. Easom, riding a 7-9 h.p. Indian, who accomplished his second attempt in 25s. The following are the results:

CLASS 1 (not exceeding 300 c.c.)—1. G. Blight (2½ O.K.), 49s.; 2. W. G. Easom (2½ Baby Triumph), 51s.; 3. A. F. McLeod (2½ Sun), 53s.; 4. J. M. Pearce (2½ Bown-Villiers), 53s.; 5. W. Pascoe (2½ Bown-Villiers), 64s.; 6. C. Rooke (2½ Alldays), failed.

CLASS 2 (not exceeding 500 c.c.)—1. E. H. Buckingham (3½ Triumph), 51s.; 2. (dead heat), D. J. Colvin (3½ N.U.T.) and A. J. Ferris (3½ Zenith), 52s.; 3. M. Row (3½ Lea-Francis), 42s.; 4. A. McLeod (3½ Hammer), 55s.

CLASS 3 (not exceeding 600 c.c.)—1. H. W. Jane (4 Triumph), 29s.; 2. S. Laity (4 Triumph), 32s.; 3. R. S. Easom (4 Triumph), 33s.; 4. J. S. Kneebone (5 Peugeot), 34s.

CLASS 4 (unlimited solos)—1. N. J. Easom (7-9 Indian), 28s.; 2. F. H. Young (6 Rover), 29s.; 3. L. Peterson (10 Henderson), failed.

UNLIMITED SIDECARS—1. N. J. Easom (7-9 Indian), 34s.; 2. G. Hamer Hunt (7 Matchless), 36s.; 3. H. Fernan (4¼ James), 47s.

Glasgow M.C.C.

This Scottish club held a successful non-stop reliability trial on Saturday, the 3rd inst., the course being through Lennoxtown, Fintry, Killearn, Blane-field, Cuilte Brae, and Kyber Pass, this thirty-three miles circuit being covered three times to a schedule of 20 m.p.h. The course proved an excellent test, the long ascent after Lennoxtown, the stiff climb of Cuilte Brae, and the bends of the Kyber Pass providing material for many failures. There were twenty-three entries, twenty-one starters, and fourteen finishers. The gold medal winners were as follows:

R. S. Brown (2½ Clyno), H. Goodwin (4 Triumph), D. B. Calder (2½ New Imperial), R. D. Robertson (8 Matchless sc.), G. Elliott (8 New Imperial sc.), G. C. Proctor (5-6 Ariel sc.), J. C. McFadyen (8 Sunbeam sc.), B. Gold (8 Blackburne sc.), and J. W. Morton (3½ Rover).

Week-end Club Events.

- Sept. 15.—Canterbury and District M.C.C. Hill-climb.
- Sept. 16.—Bristol M.C.C. Twenty-four Hour Welsh Trial.
- Sept. 17.—North London M.C.C. Inter-club Rally at Hendon.
- Sept. 17.—Ulster M.C.C. Championship of Ulster Race Meeting at Magillan.
- Sept. 17.—Taunton and District M.C. and L.C.C. Run to Weston.
- Sept. 17.—Bridgewater and District M.C. and L.C.C. Hill-climb on Puriton Hill.
- Sept. 17.—Harrogate and District M.C. Team Trials.
- Sept. 17.—Wolverhampton M.C.C. Evening Trial.
- Sept. 17.—Dewsbury and District M.C.C. Petrol Consumption Test.
- Sept. 17.—B.M.C.R.C. Sixth Members' Meeting at Whitby.
- Sept. 17.—Northern M.C. Week-end Run to Whitby.
- Sept. 17.—Edinburgh and District M.C.C. Two-day Open Trial.
- Sept. 18.—Ilkley M.C. and L.C.C. Social Run and Gymkhana.
- Sept. 18.—Leeds and District M.C. Reliability Trial for the Kirk Rose Bowl, etc.
- Sept. 18.—Manchester M.C. Speed Trials.
- Sept. 18.—Barrow and District M.C. Hill-climb.
- Sept. 18.—Corentry Triangle M.C. Circular Run.
- Sept. 18.—Doncaster and District M.C.C. Run to Castle Howard and Kirkham Abbey.
- Sept. 18.—Bury and District M.C. Competition.
- Sept. 18.—Leeds M.U. Run to Ripon.
- Sept. 18.—Sheffield M.C.C. Social Run.
- Sept. 18.—Burton and District M.C.C. Run to Woodhouse Eaves.
- Sept. 18.—Newcastle and District M.C. Flexibility Hill-climb.
- Sept. 18.—Brighton and Hove M.C.C. Gymkhana.
- Sept. 18.—Eastbourne and District M.C.C. Harold Day and Kett Competition.
- Sept. 18.—Halifax and District M.C.C. Run to Arncliffe.
- Sept. 18.—Worcester and District M.C.C. Run to Birdlip Hotel.
- Sept. 18.—Rochester, Chatham, and District M.C. and L.C.C. Mart Cup Trial.
- Sept. 18.—Central London M.C.C. Reconnaissance Run for Paperchase.
- Sept. 18.—Wakefield and District M.C.C. Run to Sykes.
- Sept. 18.—Liverpool M.C. Closing Picnic at Delamere Forest.
- Sept. 18.—Woolwich, Plumstead, and District M.C. Run to Westcliff.
- Sept. 21.—Sutton Coldfield and N. Birmingham A.C. Hill-climb.
- Sept. 22.—North Wales M.C.C. Hill-climb.

SUCCESSFUL LIGHTWEIGHTS Among the several amendments in the awards of the Six Days Trials is that of the New Imperial Team, which has now been given the team prize in Class A. The riders—B. Kershaw, D. Prentice, and L. Horton—are shown above with their machines.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

MORE EXTENDED PAYMENTS REQUESTED.

Sir,—Would it not be possible for motor cycle agents to lower the deposit required for the purchase of a motor cycle, and give extended terms of, say, eighteen or twenty months in which to pay the balance?

I am sure there would be hundreds of men, who, like myself, could then enjoy the delights of motor cycling, and, at the same time, increase the trade.

OLD READER.

Cockermouth.

BICYCLE OR "PUSH-BIKE"?

Sir,—“Ixion” says that “we cannot do without” the abominable word “push-bike.” But we can. Call things by their proper names, and there can be no confusion. The name “bicycle” applies to one machine, and to one machine alone. The other machine with which it is sometimes confused by people who have not the faculty of thinking coherently, or expressing themselves clearly, is a motor bicycle.

ANOTHER ANFIELDER.

Birkenhead.

DECARBONISING TOOLS FROM THE L.C.C.!

Sir,—When coming from Watford to London early this summer, I took the short cut from Stanmore to Edgware, in order to avoid the tramlines at Canons Park. When turning into the main road at Edgware, and going quite slowly in low gear, I crossed the tramlines almost at right angles, and when passing the second set of rails the machine skidded violently, nearly unseating both my passenger and myself.

The engine stopped dead. The machine slithered a few yards with the back wheel locked, and stopped dead.

On dismounting, I found, to my amazement, a slither of steel, about 9in. long, with a section of $\frac{1}{2}$ in., had passed through the tread, emerged near the head, and had jammed firmly in the carrier stays as the wheel revolved, locking both engine and wheel. On examination, the slither of metal proved to be a piece of steel tramline (apparently from the outside rail, which in places stands an inch or two above the road) which had worn thin, and had been detached by my wheel, peeling off much as a wooden splinter might have done. The piece of metal was tough steel, strong, and pliable as a fencing foil. I use it now as a decarbonising tool. The tyre was a Palmer cord and ran for many hundreds of miles after, despite a terrible rip in the fabric.

M. TOWNLEY.

COSTS OF SPARE PARTS AND COMPONENTS.

Sir,—Am I right in assuming that many makers either sell their machines at a loss or profiteer abominably on spares and renewals? It is apparent, in many cases, that if one bought parts piece by piece and erected one's own machine it would cost considerably more than buying the outfit complete, and this notwithstanding that the supplier in the latter instance has to bear the cost of assembling the various parts. It is obvious that every manufacturer must keep a record of the cost of every item that goes to make a complete machine to enable him to arrive at the figure at which he puts his production on the market; but does he supply his customers with spare parts on this basis? In most cases I fear not, judging by the disparity of prices charged by different firms for parts of a similar character. For instance, kick-starter springs for several well-known and popular

makes can be bought in London at 6d. each. I have paid, several times, 3s. 6d. each for springs *very little different* from those sold at 6d. Allowing for size or gauge, the difference in price is unwarranted. The same applies to most other components.

I have several friends whose incomes just make it a toss up whether they can go in for the sport, and who hesitate because of the uncertainty and fear of upkeep. There must be hundreds of men who hesitate for the same reason, and much trade must be lost to those who charge unreasonably.

The motor cyclist with a grievance airs his complaints to all and sundry, and takes care to warn them off the firms that fleece him for spares.

Why is the cost of parts when bought separately out of all proportion to the cost of a complete machine? What do other readers say?

—POURQUOI.

London, S.E.14.

WHICH IS THE MOST SILENT ENGINE?

Sir,—I desire to express my entire agreement with Mr. P. H. Rogers, in your issue of the 1st inst., regarding the silence and sweet running of the 1921 8 h.p. Enfield sidecar with Vickers engine. I consider it easily the most silent machine now on the road. When in Edinburgh recently I noticed one of these machines, and was interested to see that more than one pedestrian turned for a second to look at an outfit which ran with such freedom from noise.

FIFE.

Rosyth.

In the 1921 South African T.T., C. H. Young won both Junior and Intermediate classes on a $3\frac{1}{2}$ h.p. and 4 h.p. Triumph respectively. He also won the Intermediate event in 1920. Young's average speed over the 152½ miles course was over 40 m.p.h.

PLUGS FOR EASY STARTING.

Sir,—Seeing an easy starting tip in your "Ideas" page, perhaps it will be of interest to "E.S." and others to know that the M.A.P. plug is the goods for neither sooting nor oiling up. This is mainly owing to the position of the bar being directly over the centre electrode, which allows very easy starting indeed, as oil, etc., cannot get on the back of the bar.

Another item that I am sure has been noticed by other readers of the "Blue 'Un'" is the illustrations of the Enfield lightweight. *They even fitted band brakes to both wheels twenty years ago.* The trade must be making great strides nowadays in design. It has taken twenty years to perfect the motor cycle, yet we can see all the old ideas being worked up again and being called *new*. S.T.

Coventry.

"80 M.P.H." BRITISH BIG TWINS.

Sir,—I have followed the correspondence on "British Big Twins" with interest. The letters in your issue dated the 1st September, by "Big Twin" and "Observant," call for a reply from me as the designer and manufacturer of the Brough Superior. Both of your correspondents are labouring under a misapprehension, and they are not as conversant with their subject as they would have us believe. The catalogue published by me distinctly states the object of the design of the Brough Superior; it is a machine made to fill a long-felt want for a big twin capable of the highest speed that road conditions allow, yet fitted up with every convenience for touring purposes. That the Brough Superior fulfils all the claims made for it is proved by the dozens of letters I have received from riders all over the country—and, after all, they are the opinions that matter.

"Observant's" presumption that the Brough Superior engine is the type used by Brooklands racers in 1913 confirms his ignorance of the subject he is writing about.

GEORGE BROUGH.

SUNDAY COMPETITIONS.

Sir,—I was glad to see, in your issue of September 1st, a letter from the honorary secretary of the North-Western Centre of the A.C.U. adversely criticising your comments of August 18th, regarding Sunday competitions. I can endorse all the remarks of your critic, and would add that clubs (in the North) entirely (or nearly so) depend upon Sunday events for their very existence.

Provided that competitions are properly conducted and organised, I cannot for the life of me see where you can draw the line between Sunday touring (which you do not cavil at) and Sunday trials; and a man can be just as good a sportsman on the Sabbath as on the other six week days.

In the North we work five and a half days, and Saturday afternoons are not of sufficient length for big events—especially reliability trials—and what are these, anyway, but "touring"? Motor cyclists, numbered, controlled, and in order, are far safer on the road than a lot of irresponsible motor cyclists blinding along "on their own."

Lightweight riders who evidently appreciate the absolute independence that the use of the solo motor cycle affords. Mr. and Mrs. P. Barry, and Mr. and Mrs. G. Heath, of Hove, are all owners of Triumph Juniors, on which they are depicted.

BT2

No self-respecting club, or club member, would wilfully be a nuisance or inconvenience to the public, and I would further say that club riders, as a class, are very law-abiding.

The big Saturday events are well-supported by the "trade"—otherwise the big entry lists would soon dwindle. Your comments have not yet been brought before the Yorkshire Centre Board, but will be at the next meeting, and I have no doubt that your remarks were inspired by the allocation, to the Sheffield and Hallamshire Club, of Sunday, August 7th, for their Centre One Day Trial.

With all due deference to you, we shall, as long as the law permits, continue to hold all our events on Sundays—or other days—to suit the convenience of our members, conducting them with all respect and regard for law and order; and when Sunday competitions are forbidden (!) one "Centre" will be sufficient for all clubs north of the Trent.

This letter expresses my personal opinion, and is not written as honorary secretary of the Yorkshire Centre, but as

W. A. DOVENER.

[Mr. Dovener's views in support of Sunday competitions are at variance with the considered opinion of the governing body of which he is a member. Furthermore, he is wrong in surmising that our remarks were inspired by a Sheffield trial. (Mr. Place, of the North-Western Centre, imagined that our remarks deprecating Sunday contests applied to his centre.) They apply to all organised Sunday competitions, and *The Motor Cycle* has never wavered in its stand against them.—Ed.]

ILLEGAL SILENCING ARRANGEMENTS ON STANDARD MACHINES.

Sir,—Your correspondent Mr. V. O. Gretch seems to have replied to my former letter without appreciating the point at issue. As an experienced rider with a practical knowledge of motor cycles, I am fully aware of what can be done in regard to the fitting of a silencer, but my contention is that the Norton machine, as produced by the makers, does not comply with present legal requirements.

Has Mr. Gretch ever tried to ride a Norton machine (having no gears) up a steep hill with houses on each side? I have, and this accounts for my being

Kenilworth.

FED UP.

WHY BUY A POGO?

Sir,—I recently rode a motor cycle and sidecar from London to York, via Leicester, Derby, Sheffield, and Doncaster. As far as Sheffield, save for a few vile miles outside Leicester and the track between Derby and Sheffield, the road surface was reasonably good; but from Sheffield to Doncaster and Ferrybridge, and thence to Tadcaster, there are large portions which are little short of murderous.

Three months ago parts were under repair; now those parts alone stand out like oases along a real *Via Dolorosa*. Picture papers have just been showing some sort of queer new toy on which you stand and bounce heavenwards. Take a cycle from Doncaster to Tadcaster, and you have learned all there is to know about bouncing. Some of the pot-holes are like young bathing-pools, though here and there a cynical road-man was amusing himself by converting a hole into a mound. In one place for many yards you had to pass over a carpet of raw earth and jagged flints, the road having been riven asunder and left to repent of its sins.

In one or two places there are short stretches of perfect surface. One supposes these are put in as a temptation to the unwary.

Whether the wicked are punished in this world or another is open to discussion, perhaps, but I hope this dream I had comes true: for I beheld the Ultimate Man Concerned stand on trial before a demonic court, and the judge put on the black cap; amid the shudders of the spectators, he was condemned to ride for all eternity to and fro over the road from Sheffield to York. And, sir, I may tell you that the Wandering Jew and the Flying Dutchman will be kings to that U.M.C.

(Mrs.) CONSTANCE H. LINNEY.

POWER UNIT FOR AN INVALID MOTOR CHAIR.

Sir,—With reference to your correspondent "Workshop's" enquiry for a 3½ h.p. water-cooled engine to fit to his hand-propelled invalid's chair, we think your correspondent is greatly over-estimating the horse-power required even for hilly Wales, and also the capabilities of his chair to stand up to an engine of this size, especially with all the etceteras necessary for water-cooling, and, candidly, we do not know of any chair on the market to which it would be safe or advisable to fit an engine of this horse-power, or that would safely carry an engine of this size with all its necessary supplementary fittings for drive, etc.

We do not know what make of chair your correspondent's friend has, but if it should happen to be one of our make, may we ask him to communicate direct with us in two or three weeks' time, when we shall have a motor fitted and running which has been specially designed for the Argson back axles and could be readily fitted to his chair?

THE ARGSON ENGINEERING CO., LTD.

A. R. GARNETT, Director.

CLEANING A STAINED WATERPROOF.

Sir,—May I write a word in defence of the cleaner, whom our friend "Ixion" appears not to love.

The cleaning price for a heavy trench coat, though varying according to locality, should be no more than 9s. 6d.; less for a singly-lined coat, and still less for an unlined raincoat. Take the maximum 9s. 6d. (one need pay no more), if this is half the price of the new coat, then that coat is certainly not worth cleaning. It pays much better to buy a good coat, as it can then be cleaned repeatedly without injury.

The type of coat which is returned from the cleaner like a rag is rag, unless it is one with an oiled silk or linen inter-lining, when naturally dry cleaning (with spirit) will do it in. A good twill needs no dope to make it turn water, and can therefore be cleaned without injury. An umbrella or a canvas tent does not require a coat of paint, and a raincoat should not require doping, as it will no longer be rainproof when petrol has been spilled upon it.

Moreover, it can be cleaned without petrol—merely with soap and water. I do not advise sending it to the laundry with the weekly wash, but it can be "wet cleaned" by a responsible cleaner, provided it has not been used as an overalls during overhauls.

CLEANER.

Kingston-on-Thames.

Sir,—Referring to "Ixion's" remarks on "My Coat," it may be interesting to know that I have cleaned and re-proofed my coat at a cost of well under a shilling.

The coat is first thoroughly soaked in warm soapy water and then wrung out. It is next laid on a table and scrubbed with soap and warm water, the soap being rubbed on to the brush and not on to the coat. When done the coat is rinsed in a small quantity of warm water and hung up till nearly dry. Any spots of oil, etc., remaining may then be got off by means of a rag soaked in petrol. The coat is then dipped into the water-proofing solution, i.e., it is immersed and thumped for a few minutes in warm alum solution (two ounces to a gallon of warm water). After, it is taken out and hung up to dry. It must not be squeezed but simply let drip. When dry the job is done. A second dipping into the alum will do no harm, but it will be found that it is rather difficult to wet the coat, the solution simply rolling off like water off a duck's back.

There is only one drawback to this process, and that is that the coat assumes a slight whitish shade.

G. D. BARROW.

THE SUCCESS OF THE SIX DAYS.

Sir,—The A.C.U. has been severely criticised; it is only fair that it should be warmly congratulated. Everyone approved the regulations for the Six Days, though some apparently funk'd them. The only question in the minds of most was whether the A.C.U. might interpret the rules too severely—especially in regard to the "silence" and "final examination" tests. The A.C.U. has been fully justified. No one can possibly accuse the officials of undue severity. The trial has been a splendid demonstration of what the motor cycle and cycle car can accomplish.

This has undoubtedly been the object of the A.C.U. throughout in these trials. If freak hills were included it was not in order to "ride a machine to destruction," but

with the object of showing the power of some machines to surmount every obstacle. When freak hills became too freakish they have been dropped. The climbing power of machines had been demonstrated for all practical purposes, and it was useless to prove that a machine might accomplish what no sane rider would attempt. It remained to show (and the proof was not superfluous) that a machine could be driven without excessive noise—a point of the greatest importance in regard to popularity, to prove the extraordinary economy of most machines by a "consumption trial," and their endurance by a severe speed test. This last was not a race and gives no evidence of the speed which could be attained, but it has proved that the best machines can stand the severest possible strain and survive in a fit condition to pass the final "examination test." Possibly a timed hill-climb might have been added, but the objections which were raised (unfairly, I think) to the Lynton-Portlock test in another trial had to be considered.

On another point the A.C.U. is to be congratulated. It has obtained an excellent press. It is astonishing that, as a rule, so little notice is taken of motoring in the general press—apart from sensational reports of motor accidents. This year's Six Days, however, has been fully reported each day in quite a number of papers. For this there are two reasons. In the first place there is no doubt that the novelty of the conditions has aroused an unmistakable public interest. The same thing happened in regard to the "stock car" trial, which was also well reported—it is a pity that both these trials were less warmly supported than they should have been by some of the trade. In the second place the results have been officially published day by day with commendable promptitude. Too often one has to wait days, or even weeks, before the results of a competition are known, and daily newspapers naturally do not report things which happened the day before yesterday, or, it may be the week before last.

May I add a word of praise for the cycle cars? It is true that only three makers ventured to compete, three Morgans, one T.B., and two G.N.'s—the last the only starters of the four-wheelers, which were included for the first time since the war. But all cycle cars which started obtained gold medals. It was unfortunate, perhaps, that no team prize was awarded to this class; had this been offered possibly more entries would have been received. It was, however, a compliment to the cycle cars that they were required to accomplish more than the most powerful sidecars.

H. GEORGE MORGAN.

SUMMARY OF CORRESPONDENCE.

"J.B." (Chippenham) wishes to thank H. R. Harveyson for his thoughtfulness in carrying "Finis" on the day of the Six Days Trial, when he was at the tail end of the procession of competitors.

"Dug PH 2534" (Guildford) opines that, although the best British big twins may be slower than the corresponding American machines, they will wear longer and are considerably less complicated.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Price net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/3.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

Times to Light Lamps.

" 19th	...	8.6 "
" 21st	...	8.1 "

Ferry Charges Reduced.

The Firth of Forth ferry charges have been reduced by 50% as a result of the activities of the A.A. and the Royal Scottish A.C.

A Speed Limit for Lynmouth?

A speed limit for motor vehicles at Lynmouth is being urged by Lynton Urban District councillors, who state that on August 18th no fewer than 274 cars and motor cycles passed along Watersmeet Road, along which, it is stated, the school children had to pass. Were the schools open on August 18th?

Respite or Reprieve?

There is only one way whereby the solo motor cyclist can find out whether he may or may not dispense with a rear light. He must find out the attitude of the police in each district in which he proposes to ride. Old byelaws still abound; and, until some definite ruling in the way of new legislation is issued, only an optimist will unscrew his rear lamp clips!

The Six Days through Other Eyes.

From a Somerset paper: "In connection with the reliability trials extending over six days, which were arranged by a London company, a large number of interested spectators watched them go through the town; but, apart from the competitors' numbers, there was nothing to attract attention more than to an ordinary cyclist." Perhaps the reporter expected fancy dress. The italics are ours.

Current Chat

Imports and Exports.

Imports of motor cycles for August show a decline of £8,000 compared with the previous month of July, and a marked decline compared with August of last year, when we imported £65,884 worth of machines and "parts."

Imports.	July, 1921.	Aug., 1921.
Number of motor cycles ..	78	55
Value of machine and parts	£20,707	£12,756

BRITISH EXPORTS.

The Board of Trade figures for August do not denote a very rosy state of affairs in the export world. The same low level, however, is maintained that was registered for June and July, there being only a few thousand pounds difference in the figures. The most startling comparison is when last month's figures are compared with August of last year, when well over a quarter of a million pounds worth of machines and parts were exported.

Exports.	July, 1921.	Aug., 1921.
Number of motor cycles ..	646	539
Value of motor cycles only	£54,834	£44,366
Value of parts ..	£23,904	£30,848
Total value	£78,738	£75,214

Petrol Imports.

Up to the end of August this year the importation of petrol exceeded last year's figures for the same period by 45,021,064 gallons.

The Swing of the Pendulum.

Seventeen per day was the average number of motor cycles exported last month. Against the eighty-five per day of August, 1920, the number is ominous, but it is to be hoped that it is the zero figure.

Special Features.

THE "SIX DAYS"—DEDUCTIONS AND IMPRESSIONS.

SIDECAR ATTACHMENTS.

THE ANGLO-DUTCH TRIAL.

Appointments.

We are pleased to record that Mr. C. Walter Hyde has quite recovered from his illness, which forced him to resign his appointment with the B.S.A. Co., and has now joined the Dunlop concern.

A well-known Northern motor cyclist and honorary secretary of the Yorkshire Centre A.C.U. and the Bradford M.C. and L.C.C., Mr. W. A. Dovener, has accepted the post of district representative of the Scott Motor Cycle Co. for Yorkshire, Durham, and Northumberland. It will be recalled that Mr. Dovener severed his connection with the firm last Christmas, after having been secretary and cashier for ten years.

From Aosta up the Great St. Bernard.

Those who competed in the International Six Days Trials and our readers who followed the report of that event in these pages will be able to realise the nature of such a hill-climb as that recently held at Aosta in Italy.

To the top of the Great St. Bernard Pass constituted the course, and the competitors had to ride over a distance of practically twenty miles, ascending 5,580ft. between the starting and finishing points.

The fastest time of the day (35m. 11 $\frac{3}{4}$ s.) was made on a 7.9 h.p. Harley-Davidson sidecar in the 1,000 c.c. class. This time was only equalled by a 70 h.p. Mercedes car. The 350 c.c. class was won on a Maffei in 45m. 21 $\frac{3}{4}$ s., with a Douglas third in 46m. 36 $\frac{3}{4}$ s. The 500 c.c. class was won on a Ferrera in 37m. 54 $\frac{1}{2}$ s.

LOOKING
TOWARDS
AMESBURY—M. C.
Breese, a gold medal
winner, on his 6
h.p. B.S.A.

90 M.P.H. ON A COUNTRY ROAD.

2½ h.p. and 3½ h.p. Sunbeams secure Chief Honours at Norfolk Club's Open Speed Trials. Fourteen Firsts for Dance.

One of the official starters was somewhat of a hustler, but Le Vack (Indian) is too old a hand to be caught unprepared at the word "Go."

ALL the essentials of a most successful race meeting—glorious weather, a large and high quality entry, and good organisation—attended last Thursday's open speed trials, held on West Harling Heath by the Norfolk M.C. and L.C.C. Yet the event fell very flat.

This is hardly surprising, for five solid hours of timed speed trials on a safe but very dusty kilometre "straight" is long enough to damp the enthusiasm of most. There were eighteen distinct classes, sixteen of which were sub-divided into members' and open sections, thus making thirty-four in all, which is at least twice as many as should be!

George Dance literally swept the board in the open classes, winning fourteen firsts, making fastest time of the day—24½s. for the flying kilometre, a speed of over 90 m.p.h.—and provisionally gaining four silver cups. Both his 2½ h.p. and 3½ h.p. Sunbeams were o.h.v. models.

Le Vack—on his Indian—was obviously off colour, for he only succeeded in getting placed once, and he ran in eight classes.

80 m.p.h. Too Slow to Win!

Although G. W. Walker touched 80 m.p.h. on his Norton with great consistency, he was no match for the o.h.v. Sunbeam; but he was usually just a little too fast for two comparative newcomers to such events—E. Searle (¾ Sheffield Henderson) and C. P. Wood (Scott)—who were both well in the running for places. Searle's mount had an o.h.v. Blackburne engine, while C. P. Wood made his best speed—75 m.p.h.—on the ¾ h.p. Scott Squirrel.

There was little to choose between I. P. Riddoch's 2½ h.p. Blackburne and H. F. Mase's 2½ h.p. o.h.v. A.J.S. in the open classes; but in the members' section the latter rider secured 100% honours—six firsts from six attempts.

Two strokes scored in the open 250 c.c. classes, R. E. Pugh (2¼ Levis) winning both from a strong field; but in the closed events a local New Imperial beat a local Levis by 3s.

Although he competed in almost as many classes as his triumphantly successful colleague Dance, Bennett did not succeed in running his side-valve Sunbeam into a place.

J. G. Goodenough, R. M. Knowles, and J. G. Handworth on Nortons, C. J. W. Trendall on a Sports Sunbeam, and M. G. Bagshaw (7-9 Harley-Davidson) were others to make far more excellent per-

formances than any of the spectators realised. (No members' placings were posted during the event.)

Below are the full results (which, incidentally, took our representative nearly two hours to dissect and tabulate):

OPEN CLASSES (STANDING START).

250 c.c. SOLO.—1, R. E. Pugh (2¼ Levis), 42½s.; 1, J. V. Prestwich (2¼ J.A.P.), 45½s.; 3, N. A. Lowe (2¼ Diamond-Jap), 46s.
350 c.c. SOLO.—1, G. Dance (2¾ Sunbeam), 35½s.; 2, I. P. Riddoch (2¾ Blackburne), 40½s.; 3, H. F. Mase (2¾ A.J.S.), 41½s.
500 c.c. SOLO.—1, G. Dance (3½ Sunbeam), 30s.; 2, G. W. Walker (¾ Norton), 33½s.; 3, E. Searle (¾ Sheffield-Henderson), 35½s.

Nobody bothered to ask who won in the concluding dozen or so classes—the answer was always "Dance." He is shown here winning the 750 c.c. class at nearly 90 m.p.h.

90 m.p.h. on a Country Road.—

750 c.c. SOLO.—1, G. Dance (3½ Sunbeam), 31½s.; 2, G. W. Walker (3½ Norton), 34½s.; 3, E. Searle (3½ Sheffield-Henderson), 36½s.

UNLIMITED SOLO.—1, G. Dance (3½ Sunbeam), 31s.; 2, E. C. E. Baragwanath (8 Martin-M.A.G.), and E. Searle (3½ Sheffield-Henderson) tied, 35½s.; 4, G. W. Walker (3½ Norton), 35½s.

600 c.c. SIDECARS.—1, G. Dance (3½ Sunbeam sc.), 39s.; 2, G. W. Walker (3½ Norton sc.), 42s.; 3, G. P. Wood (3½ Scott sc.), 44½s.

750 c.c. SIDECARS.—1, G. Dance (3½ Sunbeam sc.), 39½s.; 2, G. W. Walker (3½ Norton sc.), 42s.; 3, E. Searle (3½ Sheffield-Henderson sc.), 45s.

BUILT FOR
SPRINTS.

E. Searle made a very successful debut on a 3½ h.p. Sheffield-Henderson fitted with an o.h.v. Blackburne engine.

PETROL CONSUMPTION AND SPEED OF THE "SIX DAYS" MACHINES.

SOME very interesting data are available by the publication of the speeds and fuel consumption figures in the recent Six Days Trials. It should be noted, however, that the speed test was not a race; and, although bonus marks were awarded for times that bettered the class minimums, several competitors did not make any attempt to take advantage of this.

CLASS A.—Up to 250 c.c.

Rider and Machine.	Speed on Brook-lands.	Petrol.	Oil.

CURRENT CHAT (Continued from p. 326).

Winding-up a Speed Event.

At the conclusion of the open speed trials of the Norfolk M.C. and L.C.C. (described on another page of this issue) a highly successful dinner took place at the Maid's Head Hotel, Norwich. Many of the competitors were present.

Lighting-up Time.

An all-the-year-round "one hour after sunset" lighting-up regulation is by no means ideal. During the summer one and a half hour after would not be too long. In spring and autumn one hour is about right, but in the depths of winter the interval between sunset and lighting-up might well be shorter. It must be remembered that the average speed of vehicles is much greater now than it was when the regulation was first ordained.

Pedestrians' Rule of the Road.

The London Safety First Council has obtained official sanction for a campaign to make familiar to pedestrians the rule that foot passengers shall keep to the left. By so doing, people on the outside edge of the footpaths will be meeting the stream of road traffic, and thus the danger of accidents, due to persons stepping into the road with their backs to oncoming vehicles, will be obviated. In the interests of general safety, motor cyclists should adopt the familiar "rule of the road" when walking, and advise their friends of its obvious advantage.

A.C.U. Six Days Amendments.

We have now received from the Auto Cycle Union a list of amendments to the list of provisional results of the Six Days Trials already published. These are as follows:

R. Elliott (3½ Rover), gold medal with certificate.
A. J. Wilkes (3½ Rover), gold medal with certificate. Both these riders were formerly announced as having been awarded certificates only.
E. H. Gifford (6 Martinsyde sc.), gold medal with certificate, formerly announced as having won a silver medal.

Class A Team Prize (it was announced that no team qualified for this prize).—New Imperial riders: B. Kershaw, D. Prentice, and L. Horton; total marks, 1,727.

OTHER CORRECTIONS.

E. Searle (4 Sheffield-Henderson) completed the speed test at an average speed of 39.38 m.p.h., and was awarded a gold medal.
Best Petrol Consumption in Class C.—A. J. Wilkes (3½ Rover), 111.2 m.p.g.
Best Petrol Consumption in Cycle Car Class.—H. F. S. Morgan (8 Morgan), 67.1 m.p.g.
Best Oil Consumption in Class B.—G. F. Mason (2½ Connaught), 3,114 m.p.g.

Provincial Tour of Trade Commissioner.

Mr. W. G. Wickham, His Majesty's Senior Trade Commissioner in South Africa, is engaged on an official tour of this country for the purpose of discussing with firms the possibilities and conditions of United Kingdom trade with the Union of South Africa. The first part of his tour includes the following towns:

Leicester, on September 19th to 21st.
Nottingham, on September 22nd to 23rd.
Sheffield, on September 28th to 30th.
Leeds, on October 3rd to 5th.
Bradford, on October 6th to 11th.

Firms in these centres desiring to interview Mr. Wickham should communicate immediately with the secretary of their local chamber of commerce.

Arrangements to visit other industrial centres are being made.

To Caterham and Sevenoaks Motorists.

Observers are required for the M.C.C. sporting trial, which will be held over a course in the Caterham and Sevenoaks district on the 24th inst. Local motor cyclists who are willing to help should communicate as soon as possible with Mr. E. A. Bridgman, 366, Euston Road, London, N.W.1, or report to Mr. L. A. Baddeley, the chief observer, at the start of the trial, 9 a.m., at the Railway Hotel, Caterham.

Motor Traffic through Markets.

Following representations by the Automobile Association regarding the congested state, on market days, of main roads adjacent and leading into Aylesbury Market Place, which is crossed by main road traffic, the Chief Constable has kindly arranged to place an additional constable on duty on market days, in order to prevent, as far as possible, obstruction to through traffic. It is hoped that farmers and others attending market, also motorists, will co-operate in this endeavour to avoid inconvenience to vehicle users and pedestrians.

Autumn.

Summer time ceases for this year on October 2nd. Motor cyclists will be well advised to overhaul their lamps.

Next Saturday's Big Midland Climb.

As was expected, the first 1921 open hill-climb of the Midland Centre A.C.U. has attracted a very representative entry. The event, which will be held on Penkridge Bank, commences at twelve noon on Saturday next.

North London Rally.

Although the chief award at the North London M.C.C. rally at Hendon next Saturday is a challenge shield for the best club attendance, there are numerous prizes for which unattached motor cyclists are eligible.

Cause and Effect.

For riding for a distance of from fifty to sixty yards on the footpath, a Southport motor cyclist has been fined 40s. The defendant alleged that the road was so bad that the last time he traversed it, it cost him 17s. 6d. for repairs.

Ffrith Hill, a new terror for trials riders in North Wales. It is a little known gradient near Caergwile, and is crossed by the picturesque viaduct of the railway between Wrexham and Mold. A Norton rider in last Saturday's Reliance Cup Trial is shown commencing the ascent. (See pages 330-332.)

OFF THE BEATEN TRACK IN NORTH WALES.

A Day amid Lanes, Watersplashes, and Hills for the Liverpool M.C. Reliance Cup.

The hairpin at the foot of Conquering Hero. G. Dance (3½ Sunbeam) after overtaking S. V. Banner (7-9 Harley-Davidson) on the bend.

THERE are two ways only of describing the Liverpool M.C. Open Trial for the Reliance Cup on Saturday last; it was either an easy difficult trial or a difficult easy one.

Such an apparently contradictory statement may easily be reconciled if we refer a moment to past history. The Reliance Cup event is usually held rather late in the year, when the weather is bad; and the contest has a reputation which it

clearly all day, and the rain of the previous night had left no trace;—therefore, the difficult became easy—so to

speak, and with qualifications—and a high percentage of the fifty-one starters finished to time.

Extended upturned exhaust pipe on Miss Cottle's 4 h.p. Triumph to obviate back pressure in the watersplashes.

shares with the city of Manchester—"always raining." With such well-known hills as Alt-y-Bady and Conquering Hero, not to mention the new finds at Ffrith (the *sol-disant* Horsman's Ladder) and Bodfari Station, a trial which included seven watersplashes, five other observed hills, one hairpin, and half its mileage over rough lanes of barely sidecar width, would be the height of difficulty. As it was, the sun shone

Alt-y-Bady, thanks to its dry surface, was easy last Saturday, but the sidecars needed extra weight on the back wheel, as G. W. Shepherd's 8 h.p. Excelsior sidecar here shown.

Off the Beaten Track in North Wales—

At the start (the Hawarden Castle Hotel, Queensferry, near Chester) it was evident that much nervousness existed as to the watersplashes. Magnetos were plastered with grease; indeed, G. W. Shepherd (8 Excelsior sc.) had about 2 lb. of it smeared round the contact breaker and the brush holders, while the Norton contingent favoured sponge bags, and

A flexible extension pipe fitted to W. S. Madon's 8 h.p. Zenith silencer.

quite a number of special silencing arrangements were fitted. W. S. Madon (8 Zenith) had a flexible extension pipe from the silencer outlet to the carrier top, as had S. H. Beard (6 Excelsior sc.), and one or two of the Sunbeam riders. Miss F. Cottle (4 Triumph) not only had a permanent exhaust pipe directed high up behind the machine, but beside the tank had a Stauffer screw-greaser with a pipe down to the flanges of the countershaft pulley. This apparatus was charged with belt dressing, so that the effects of the watersplashes could be counteracted.

As it transpired, all these elaborate precautions were unnecessary, for there was scarcely a splash with enough water in it to wet the rims of the machines.

The first thirty miles involved no special difficulties, Cilcain hill being easy, but the roads (or lanes more properly) were narrow and twisting, and the legal limit average was faster than was absolutely safe; in many places there was only sufficient width for a sidecar, and had one stopped for any reason, the whole trial would have been held up until it had been pushed a mile or more to a wider space.

At Cwmman the fifth and most difficult watersplash was encountered; it was not deep, but the flow of the stream was treacherous, and caused the solo men to flounder about, the most surprising thing being Eric Williams's failure, for his Sunbeam stopped just as he reached the far side.

Where Chain Drive Scored.

On the steep hill, with an acute S bend immediately following, J. Lee (4½ B.S.A.) came to a standstill through belt slip, while several footed round the hairpin at the top, where the main road was reached.

A time check was taken at Efrith; immediately after leaving the village the "new" hill was climbed. It is exceedingly rough and loose, about half a mile long, and only wide enough for a sidecar.

Wheel slip was the passenger drivers' difficulty, while solo men had to go warily to keep a straight path.

V. N. Wilkinson (3½ Sunbeam sc.) found the hill too much for his power, while W. Edwards (4 Powell) likewise came to a standstill.

Most of the lightweights climbed slowly but well, and L. Judge (2½ Velocette) was the only unsuccessful one. H. Greaves made a wonderfully good ascent on his 2½ h.p. Beardmore, but his *confrère*, L. A. Bees, was not nearly so fast; his rear mudguard was also approaching a state of decrepitude. S. V. Banner (7-9 Harley-Davidson) fell, and was

W. Edwards's exhaust pipe (4 Powell). A spare plug was also carried in the exhaust valve cap.

pinned down by his machine, and H. Arkley (6 L.M.C.) followed a wobblesome course, but did not stop. For excellent climbs, consult all the names in the list of survivors not mentioned here!

Alt-y-Bady after Lunch.

Fifty of the fifty-five starters reached the lunch check at Llangollen.

One wonders if the committee had any consideration for the fact that Alt-y-Bady was to be climbed almost immediately after lunch, when they selected a temperance establishment for that meal; neither courage nor comfort was to be had, in liquid form at any rate.

Probably Alt-y-Bady has never been in better, or should we say easier, condi-

Solo machines made light work of Alt-y-Bady A. Hewitson (3½ Scott) making a sure and steady ascent

Off the Beaten Track in North Wales—

tion, and the majority made light work of it. Ovarations were earned by Miss Cottle (4 Triumph) and Miss Pickering (4 Powell), who handled their machines in masterly fashion. Westwood Wills (4 Powell), all out to win his "middle gear" sixpenny sweepstake, almost reached the summit before changing down to low.

Bennett (3½ Sunbeam) evidently thought he was still in the Grand Prix, and his stable companion Dance made a similarly fast ascent, of the "rough" order—leaping into the air and righting his machine in a wonderful fashion, entirely calculated to deter the average non-motor cyclist from purchasing such a terrifically dangerous vehicle. In reliability trials' riding it is a pity that makers cannot persuade some of their men, at any rate, to show the public just how docile and gentle an ascent can be made—without heroics, without perspiration. Scott machines have this power, and, despite their limitations of gear ratio, the climbs made by A. Hewitson and C. P. Wood were very convincing. H. S. Barton (3 A.B.C.) also made a pleasing climb; and J. Lee, on a rather ancient chain-cum-belt B.S.A., made quite a steady ascent. Eric Williams (3½ Sunbeam) stripped his rear sprocket. Of the sidecars, all those still running made good ascents, except R. Edwards (4 Triumph sc.) and H. Roberts (4 Dunell sc.).

Sidecar Ascents.

V. Horsman (4 Norton sc.) was exceptionally fast, and R. Brown (3½ Sunbeam sc.) showed that the hill is not too much for a 500 c.c. sidecar.

G. W. Shepherd's lady passenger sat on the carrier of his 8 h.p. Excelsior sidecar, bumping violently—admittedly almost a necessary thing to do on such a hill, but, again, neither good propaganda

nor particularly pleasing to see. A clever piece of driving was shown by J. H. Green (8 Excelsior sc.) in avoiding the wild plunging of C. Fox's 4½ h.p. B.S.A.; both succeeded.

More and Still More.

Thereafter the story must be summarised. Main roads, mountain roads, by-roads and no roads, and competitors' adjectival roads led northwards, *via* Conquering Hero and a new rough riding track near Bodfari Station, thence to Holywell, where a timed climb up Pen-y-Ball was made; there was some doubt as to the finish of the timed section of this test.

To the finish at Queensferry was main road going, and the under-mentioned survived the course, although many of them suffered stops and loss of time.

On the whole, the trial was a thoroughly sporting one. The weather conditions favoured the competitors to a remarkable degree, and the organisation, except at the lunch stop, was excellent.

A SCOTTISH "TWO DAYS."

FIFTY-TWO motor cycle and sidecar entries have been received, up to the time of writing, for the Scottish Two Days Open Trial, which takes place on Saturday and Monday next.

Described as "a Scottish Six Days in Miniature," this event will be run on exactly the same lines as regards checking, etc., as the popular whole week trial, also organised by the Edinburgh Club.

The route will be as follows:

SATURDAY.—Edinburgh, Broughton, Talla, St. Mary's Loch, Selkirk, Moffat, Thornhill, Moniaive, Dalry, Newton-Stewart, Glenluce, Stranraer: 196½ miles.

SUNDAY.—At Stranraer.

MONDAY.—Stranraer, Cairn Ryan, Barrhill, Barr, Dalmellington, Sanquhar, Abington, Biggar, Edinburgh: 145½ miles.

There will be three observed hills on Saturday (Talla Linn, Auld Brig Road and Chairley's Brae, and Tynron Hill), and three on Monday (Laird's Hill, Pinmore Mains Hill, and Final Hill).

The start takes place at Liberton Car Terminus, Edinburgh, at 7.30 a.m.

For the convenience of those who wish to observe the competitors at any point on the course, a list of entrants with their official numbers is appended:

A Representative Entry.

1. J. B. Sanderson (2½ Hawker).
2. W. B. T. Sanderson (3½ Scott).
3. J. A. Porter (2½ Massey-Arran).
4. J. W. Morton (3½ Rover).
5. D. M. Galloway (5 N.U.T.).
6. T. Michie (3½ Norton).
7. A. Brown (3½ Sunbeam).
8. S. Milne (3½ Sunbeam).
9. J. F. Dykes (3½ Sunbeam).
10. W. B. Anderson (4 A.J.S.).
11. G. Rae-Arnot (3½ Scott).
12. D. Wright, jun. (4 Indian Scott).
13. R. Matheson (3½ Norton).
14. J. Hendrie (3½ Sunbeam).
15. D. Ogilvie (2½ Starley).
16. Neville Hall (2½ O.K. Junior).
17. W. L. Fincher (4 Triumph).
18. R. L. Williamson (3½ Norton).
19. R. Watson (4½ Humber).
20. A. K. James (3½ N.U.T.).
21. T. Laing (3½ Sunbeam).
22. A. L. Downie (5-6 Raleigh).
23. S. B. Waldie (3½ Blackburne).
24. L. P. Waldie (3½ N.U.T.).
25. J. J. A. Dias (3½ Sunbeam).
26. J. W. Burton (3½ Norton).
27. W. T. Tiffen (2½ Velocette).
28. R. M. Wilson (2½ Hobart).
29. J. C. M. Guy (4 Triumph).
30. Tom Gilles (3½ Sunbeam).
31. A. W. Welsb (4 Triumph).
32. Jesse Baker (3½ Scott).
33. R. K. Morrison (7 A.J.S. sc.).
34. J. Shepherd (8 Chater-Lea sc.).
35. D. S. Alexander (8 Matchless sc.).
36. R. S. Macrae (7-9 Harley-Davidson sc.).
37. A. F. Sidford (8 Matchless sc.).
38. Geo. Grinton (7-9 Harley-Davidson sc.).
39. C. R. Logan (6 Campion-Jap sc.).
40. W. C. Donaldson (5 Rover sc.).
41. A. Grant (5 Rover sc.).
42. G. Stokes (5 Rover sc.).
43. K. W. B. Sanderson (3 Brough Superior sc.).
44. J. W. McKeand (8 Blackburne sc.).
45. R. Spence (8 Chater-Lea sc.).
46. J. Oswald Turnbull (7 American X sc.).
47. D. S. Anderson (8 Enfield sc.).
48. A. F. Downie (7 A.J.S. sc.).
49. H. M. Batten (5 Scott Sociable).
50. A. Ure, jun. (7-9 Harley-Davidson sc.).
51. H. E. Fairley (2½ Hawker sc.).

CLUB COLOURS.

All Yacht Clubs have their Flags—Why not Motor Cycle Clubs?

The red and white pennant of the Public Schools M.C.C.

Yellow and black are the Worcester and District M.C.C. colours.

The black and white pennant of the Edinburgh and District M.C.C.

The white cross of St. Andrew on a blue field adopted by the Glasgow M.C.C.

THE motor cycle is the landsman's yacht—a cruising craft or a racer, as the case may be—and it is rather surprising that the adoption of colours, à la yacht clubs, has not become universal. Many clubs have adopted a badge for the handle-bar or the front number plate, but that represents something more to clean and to catch the dust. Other clubs—very few, indeed—have their flags. Among these are the Public Schools M.C.C., the Worcester and District M.C.C., the Glasgow M.C.C., and the Edinburgh and District M.C.C.

Living nearer yachting water than most of their contemporaries, it is not surprising to find that the two Scottish clubs mentioned have their flags made for them by bunting experts. The Glasgow club went so far as to have a pennant designed by Mr. Graham Johnston, herald painter to the Lyon Court.

As will be seen, the pennant consists of the silver or white cross of St. Andrew on a blue field (the national flag of Scotland and the foundation of the Union Jack of Britain), the white cross being charged with the red triangle. The device may be taken to symbolise Scottish motoring with caution. In the quaint language of heralds, the pennant is blazoned: azure, on a saltire argent a triangle gules voided of the second. Some other Scottish motor cycle clubs may adopt the same flag, but with a dif-

ferent badge in the centre of the white cross. The standard form of the pennant is of silk stencilled in fast colour, and it is usually carried on a pole on the front number plate. Favoured members may have their pennant embroidered by the lady passenger. The president of the club is entitled to display the flag in rectangular form, 4×5in., and a method of distinguishing other officials of the club, say, by double-tailed pennons, could be devised.

Yellow. Red. Blue. Green. Purple. Black.

The recognised method of indicating colours used in heraldic or other colour work.

As the advantages of having a club flag are many, English clubs might consider the question more seriously. A pennant of St. George with a club device in the first quarter or on the red cross would look very well. The

nationality and locality of the club would thus be indicated. Welsh and Irish clubs might also adopt club flags; and clubs with a British jurisdiction might have flags based on the three blended crosses of the Union. Yacht clubs have their burgees, and the Caravan Club its pennant; motor cycle clubs should also display their colours. Black and white have been

chosen for the pennant of the Edinburgh and District M.C.C., and English visitors to this very hospitable club may regard the choice as significant! It is of handsome design, and includes a silhouette of Edinburgh Castle.

What do clubmen think of a general adoption of the idea? We shall be pleased to illustrate any other club flags.

The president, captain, and secretary of a club may be distinguished by his flag. It is suggested that the first-named displays a rectangular flag, the captain, say, a double-tailed pennant, and the secretary a flag of another distinctive shape.

UNAUTHORISED WARNING SIGNS.

A WRITER in *The Autocar* draws attention to the haughty selfishness with which owners of carriage drives abutting on to public roads attempt to decelerate general traffic and insult motorists by erecting private boards bearing some such legend as "Private Drive—Danger." Most motorists resent such boards for two reasons. The first is that the onus of avoiding collision rests primarily on the people who construct and use such petty side tracks. The second is the implication that motorists fail to see or wholly to ignore gates in the road fences.

Within the last month or two these haughty people have begun to change their tune. Some of the boards now exhibit an alternative reading which is intended to deceive strangers to the district—"Concealed Turning." Local authorities ought to see to it that in their areas no unauthorised road signs are erected, but often the elected representatives of the people connive at these signs. In such cases our motoring organisations could find an opportunity to demonstrate their usefulness by making suitable representations to the proper quarters.

A Hundred Miles of Surrey Lanes.

A Sporting Trial arranged by the Surbiton and District M.C.C. for the Ballard Cup.

C. D. Michaelis (7-9 Harley-Davidson) passing through the gate on Leith Hill He was awarded a silver medal after a good performance.

ONE hundred miles of Surrey lanes, favoured with much sunshine and a few spots of rain, a sprinkling of stiff gradients with a fair percentage of loose stones thrown in, all went to form the ingredients of a pleasant trial organised by the Surbiton and District M.C.C. on Saturday last.

The Ballard Cup was the premier award, which attracted an entry of thirty-five riders. The start was promptly made at the Angel Hotel, Thames Ditton, at 10 a.m., and for about ten miles the course led the competitors over the popular tourists' route *via* Ripley and Guildford up to Newlands Corner—a favourite rendezvous.

From the long descent into the sleepy village of Shere, the route lay *via* Coombe Bottom, a moderate climb, and White Downs to Dorking. The Downs section, consisting of a track difficult to negotiate by reason of the loose boulders and gully ways, formed an excellent brake test for the machines. No one, however, failed to control the rear wheel. A circular route round Dorking then brought the riders to the lunch stop at Ewhurst.

More Difficult Reversed.

The afternoon run was the morning's course taken in the reverse direction. An appreciable difference was witnessed at White Downs, when, this time, the competitors were required to climb the hill.

A sharp hairpin at the beginning of the ascent, rising steeply to a 1 in 6 bend, necessitated very careful handling; yet, with the exception of the big sidecar outfits, speed had to be maintained in order to negotiate the last bend.

Vivian Olsson (3½ Sunbeam), with the accuracy of an expert, rounded the bend at a fair speed. R. C. Charlesworth (8 Zenith and sidecar) also made a splendid climb.

A striking contrast of speed, however, was provided when L. Peaty (2½ Hawker

sc.) arrived. His game little machine behaved well.

R. A. Green (3½ Norton) climbed well as also did R. G. Spikins (3 A.B.C.). W. Julian's Harley-Davidson sidecar sent the loose stones flying in all directions. Well may he fit oversize tyres.

A little 2½ h.p. two-stroke which showed considerable merit was the Vasco, fitted with an Orbit engine and a Burman gear box. C. E. Taylor handled it well.

L. G. Bachelier (A.J.S. sc.) and H. F. Edwards (Matchless sc.) simply toyed with the gradients.

In all, the trial was well organised, and, though not boasting any freak hills, it was the enjoyable type of run of a dis-

tinctly sporting character of the type so popular as local club events. Results:

THE BALLARD CUP AND CLUB GOLD MEDAL.—R. C. Charlesworth (8 Zenith sc.), time error 2m. 25s.

CLUB GOLD MEDAL.—E. L. Showell (6 Martinsyde), time error 2m. 50s.

CLUB SILVER MEDALS.—R. C. Charlesworth (8 Zenith sc.), time error 2m. 25s.; E. L. Showell (6 Martinsyde), 2m. 50s.; R. C. Staunton (Triumph), 3m. 15s.; W. Julian (7-9 Harley-Davidson sc.), 3m. 15s.; D. H. Davidson (4 India Scout), 3m. 20s.; J. W. Wilson (3½ Sunbeam), 3m. 45s.; C. H. Mocatta (2½ Conson), 3m. 45s.; C. E. Taylor (2½ Vasco), 4m. 4s.; H. W. Steer (8 Zenith sc.), 4m. 47s.; R. B. Clark (2½ New Imperial), 5m. 1s.; C. D. Michaelis (7-9 Harley-Davidson sc.), 4m. 50s.; and A. O. Gruzeller (3 Zenith-Bradshaw), 5m. 17s.

TEAM PRIZE AND CLUB SILVER MEDAL.—R. C. Charlesworth (8 Zenith sc.), R. C. Staunton (4 Triumph), and C. H. Mocatta (2½ Conson)

Competitors on Leith Hill during the Surbiton M.C.C. trial for the Ballard Cup. H. F. Edwards (8 Matchless), followed by H. R. Harveyson (4 Harley-Davidson), at the bottom of the hill

LONDON-BALA-DUNSTABLE.

Essex M.C. 24 Hour Trial. Dinas Mawddwy Climbed on the Run.

HELD under ideal weather conditions, with perfect arrangements and excellent organisation, can aptly sum up impressions of the Essex Motor Club's twenty-four hours reliability trial from London to Bala and back, which took place on Friday and Saturday last. The event was open to members only, and included solo and sidecar machines, in addition to cars.

Narrow Time Limits.

In order to qualify for a gold "milestone," competitors were not allowed more than five minutes early or late, and to make non-stop runs over two observed hills en route. The event attracted forty-eight entrants, and there were twenty-five motor cycles.

In order to gain one of the premier awards, it was absolutely necessary, not only to have a good machine, but to be an expert driver.

The start took place from Ye Olde Gatehouse, Highgate, the first competitor being sent on his long journey (420 miles) at 7 p.m., followed by the others at one-minute intervals.

The first man to encounter difficulties was J. Wallis (6 Bradbury sc.), who had picked up a large nail in his back tyre near St. Albans. After a hasty repair, he proceeded; and, by the time Dunstable was reached, many of the riders were lighting their lamps, although some of the more fortunate ones carried electric.

Passing Dunstable, A. W. Graham-Martin (8 Zenith) decided to retire owing to belt troubles, having forgotten to carry a "spare." Another competitor collided with a dog, but, fortunately, without any serious results, excepting a bent footrest. J. Wallis (8 Bradbury sc.) stopped in Stony Stratford with a broken throttle wire.

Between High Cross and Tamworth the roads were excellent, but very dusty, and the competitors welcomed the well-prepared supper which awaited their arrival at the Castle Hotel, Tamworth.

It was here that four of the drivers had taken the wrong turning (although the route was excellently arrowed), and checked in late at the control. The two O.K.-Juniors, driven by W. L. Handley and Neville Hall, both appeared to have a good turn of speed, and they ran with the greatest regularity.

Trouble in the Night.

The third check was at Cook's Garage, Welshpool, 175 miles from the start, and shortly afterwards there was a loose patch of metal which proved the undoing of T. V. Davies (2½ Douglas) and G. A. Lovegrove (2½ Radco), who, in addition to damaging his lamp and front mud-guard, lost his gold watch and chain somewhere near the same spot.

Dinas Mawddwy proved no terror to the modern machines, but it gave the dusty drivers food for thought. The following

riders made good climbs: W. G. Grabb (4 Triumph), A. C. Rhodes (4 Triumph), J. G. L. Boorer (3½ N.U.T.), S. M. Greening (2½ Verus-Jap), Noel C. Dear (3½ Sunbeam), and W. L. Handley and Neville Hall, both on O.K.-Juniors. Amongst the higher-powered machines, W. C. Hemy (6 A.J.S. sc.) was the only sidecar driver to make a perfectly clean ascent.

One and a half hours were allowed at Bala before the return journey was commenced. The observed hill on the return run was Rhosgwalian, but it proved no obstacle to the riders.

Leaving the lunch stop at Tamworth, the competitors undertook the last stage of the journey, and were favoured with good roads and machines in excellent fettle to the finishing point, Dunstable, where the following riders were checked in by Mr. A. E. Edwards.

THE MANX M.C.C. AND THE T.T.

WE have received from the hon. secretary of the Manx Motor Cycle Club a copy of a letter sent to the secretary of the Auto Cycle Union anent the decision to hold the 1922 Tourist Trophy Races in Belgium:

"Eastfield,"

"Douglas, Isle of Man,
"51st August, 1921.

"Dear Mr. Loughborough,—At a meeting of the committee of the Manx Motor Cycle Club, held yesterday evening, the following resolutions were unanimously passed, and I was requested to forward them to you, with the hope that you would bring them, as early as possible, to the notice of both the Competitions Committee of the A.C.U. and the General Committee:

"1.—That this club learns with regret the decision of the A.C.U. to hold the T.T. races next year in a foreign country.

"2.—That this club is of the opinion that the holding of this, the greatest British motor cycle road race, in a foreign country, is not in the best interests of the British motor cycle trade.

"3.—That both the Competitions Committee and the General Committee of the A.C.U. be asked to receive at the earliest possible moment a deputation from this club, who would lay the case before them for the retention of the T.T. races,

if not in Great Britain, then in the Isle of Man.

"My committee have read certain statements in the press by you, purporting to be the reasons which have moved your committee to make this change. In the issue of *The Motor Cycle* of August 25th, you are reported to have stated, 'We were somewhat bled by the Manxmen.' My committee feel that such a statement as this is a serious charge to make, and would like you to substantiate that charge, giving instances wherein you consider you were bled. You also state, 'We were not our own masters; you know as well as I do the difficulties of transport, and the absence of any concessions by the Isle of Man Steam Packet Co.' We do not know what you mean by the statement, 'We were not our own masters,' and perhaps you will more thoroughly particularise what has induced you to make that statement.

"With regard to the absence of transport facilities and concessions, my committee feel that you should state exactly what you mean, so that, if there are any transport facilities or concessions which you consider should be granted, we would be able to do our utmost to see that you obtain them.

"Thirdly, you refer to the difficulty of the proposed car races. We would be pleased to use whatever influence we have both in this island and with the R.A.C. with the object of arranging dates for both the cycle and car races next year,

which would mutually be of advantage to both the A.C.U. and R.A.C. We do not anticipate, at this end at all events, there will be any difficulty.

"My committee feel that the proposed change in the T.T. races is of such importance that you should be asked to specify what other charges or complaints you have to make with regard to your treatment in the Isle of Man, being of opinion that the greater bulk of public opinion within this island would be determined that your complaints would receive fair treatment here, and that you could rest assured of receiving at the hands of the insular authorities every possible advantage and assistance; but it is necessary to specify your complaints, so that they can be enquired into and removed.

"In conclusion, we would point out that motor racing on the Continent, in the future as in the past, must be conducted under greater difficulties than have hitherto existed within this island, and we would instance the treatment meted out to competitors in the recent Grand Prix in France.

"We trust that your committee will give this letter your earnest consideration, and that we will hear from you at an early date fixing the appointment we have asked for. I was further instructed to send a copy of this letter to the members of your committee, the officials of the Association of Motor Manufacturers and Traders, and to the press.

"H. M. Rogers."

CLUB NEWS. (Continued from
page 322.)**Durham and District M.C.C.**

Speed trials, open to members of the North Eastern Centre A.C.U., will be held on Legs Cross Flat (eight miles north-west of Darlington and sixteen south of Durham) on Saturday, September 24th. There will be ten classes.

Coventry and Warwickshire M.C.

On Saturday, October 1st, the fifth annual trial for the Manville Trophy will be held over a stiff secret course, it is expected, in the Cotswolds. Entries, which should be sent to Mr. J. F. Spencer, 27, Priory Street, Coventry, close definitely on Saturday next.

Public Schools M.C.C.

Those successful in completing the 120 miles night trial to time, held on the 3rd inst., were: R. C. Charlesworth (5 Zenith), L. Yeowell (3½ Rudge), H. B. Browning (3½ Scott), W. E. Bishop (5 Zenith), and C. Keith Robinson (Ner-a-Car).

Evesham M.C.C.

At the recent speed trials in the Cotswolds, fastest time of the day was made by E. Smith (3½ Norton), who covered the 500 yards course in 13½s. (approx. 76 m.p.h.). Full results:

LIGHTWEIGHTS UP TO 350 c.c.—R. T. Bent (2½ Edmund), 23½s.; J. Bacon (2½ Douglas), 26½s.

SOLO MACHINES UP TO 600 c.c.—F. G. Byrd (3½ Norton), 18s.; F. P. Andrews (4¼ B.S.A.), 18½s.; F. G. Phillips (4 Triumph), 19½s.

UNLIMITED SOLO.—E. Smith (3½ Norton), 13½s.; F. G. Byrd (3½ Norton), 17½s.; P. F. Andrews (4¼ B.S.A.), 18s.

OPEN CLASS FOR SOLO OR SIDECAR MACHINES (on Formula).—F. B. Bent (6 Bat), 17½s.; E. Smith (3½ Norton), 14½s.; F. Byrd (3½ Norton), 17½s.

SIDECARS OR CYCLE CARS NOT EXCEEDING 10 h.p.—S. Bright (8 Enfield sc.), 22½s.; J. N. Bacon (6 Enfield sc.), 23½s.; E. Chidzey (4¼ B.S.A. sc.), 24s.

The start of the recent Hartlepool M.C. reliability trial, which included Boltby Bank on which 30% only of the competitors made clean ascents. O. M. Adlard, who secured second place on his 4 h.p. Indian Scout, waiting the signal "Go."

Hartlepool M.C.

Only about 30% of the entry in the reliability trial on the 4th inst. made clean ascents of Boltby Bank. A. J. Gardener (6 B.S.A.), O. M. Adlard (4 Indian), and R. Raine (4 Douglas) were, in the order given, the leading three, with losses of one, two, and three marks respectively.

Westoe M.C.

G. Heath (3½ N.U.T.) gained first place in the recent reliability trial, winning the President's Cup and a gold medal. Next in order of merit were T. S. Braid (4 Indian Scout) and W. Ellis (3½ Norton).

A dinner will be held on October 21st at the Regent Hotel, Ocean Road, South Shields.

Bristol M.C.C.

Although it had been announced that there would be "no freak hills, colonial sections, or bad roads," the course for the recent Carter Cup trial was as stiff as the most hardened trials rider could desire. Results:

THE CARTER CUP (presented by Mr. W. B. Carter, president of the club).—H. Walker (3½ Norton sc.); second prize, H. Spencer (4 Omega); third prize, E. G. Fery (6 Douglas sc.); fourth prize, P. Burchill (8 Rover); fifth prize (tie), P. Bonnett (8 Matchless sc.) and J. Waycott (4 Harley-Davidson).

SILVER MEDALS.—A. J. Woods (3½ Sunbeam sc.), A. J. Dyer (3 A.B.C. sc.), E. L. Smith (4 Triumph), Chugg (7 James sc.), F. G. Mann (7-9 Harley-Davidson sc.), and Austice (3 A.B.C.).

Aberdare and District M.C.C.

Held on Brecon Beacons in somewhat unfavourable weather, the recent speed trials were, nevertheless, very successfully carried out. Results:

250 c.c. (Closed).—1. A. J. Sheen (2½ Levis), 59½s.; 2. H. Harris (2½ New Imperial), 62½s.

250 c.c. (Open).—1. A. J. Sheen (2½ Levis), 63s.; 2. T. Parry (2½ New Hudson), 64s.

350 c.c. (Open).—1. Handel Davies (2½ Coulson B), 61s.; 2. R. J. Brace (2½ Francis-Barnett), 66s.

350 c.c. (Closed).—1. Handel Davies (2½ Coulson B), 62½s.; 2. R. J. Brace (2½ Francis-Barnett), 63½s.

600 c.c. (Open).—1. Ivor Thomas (3½ Sunbeam), 47½s.; 2. Ienan Parker (3½ Sunbeam), 49s.

UNLIMITED.—1. Ivor Thomas (3½ Sunbeam), 46½s. (fastest time); 2. I. Parker (3½ Sunbeam), 48s.

PASSENGER MACHINES (Open).—1. Handel Davies (8 Brough Superior sc.), 59s.; 2. Ivor Thomas (Sunbeam sc.), 61½s.

ABERDARE M.C.C. NOVICE CLASS.—1. A. J. Sheen (2½ Levis); 2. S. Gregor (3½ Norton).

Accrington and District M.C.C.

Successful competitors in the sporting trial held on the 4th inst. were:

SOLO.—H. Smith (3½ Rudge), gold medal.

SIDECARS.—S. Park (8 Enfield sc.), gold medal and cup for best performance.

ENDURANCE PRIZES.—Miss Smith (4 Blackburne sc.) and C. Riley (2¼ Enfield).

Reigate, Redhill, and District M.C.C.

Results of the hill-climb held on the 3rd inst. were as follows:

250 c.c. CLASS.—1. G. Symonds (2¼ Levis).

350 c.c. CLASS.—1. A. Gruzelier (3 Ivy).

600 c.c. CLASS.—1. W. H. Sheraton (3½ Norton); 2. Reg. Green (3½ Norton).

UNLIMITED CLASS.—1. Reg. Green (3½ Norton)*; 2. A. W. Gruzelier (3 Ivy); 3. W. H. Sheraton (3½ Norton).

* Fastest time of the day.

On Wednesday of last week a freak hill-climb was arranged, A. G. Harris winning the premier award for the best performance, riding a 4 h.p. Douglas sc.

NORTON AND HARLEY-DAVIDSON RECORDS.

TWO consistent record breakers, R. N. Judd and C. F. Temple, were very busy at Brooklands on Monday and Tuesday of last week, and both were successful, the former on a 3½ h.p. Norton breaking two, and the latter on a 7-9 h.p. Harley-Davidson, with and without sidecar, beating eight in all, and, incidentally, raising the British flying mile to 100 m.p.h. (exactly) for the first time.

CLASSES C AND D (500 c.c. and 750 c.c.).
FLYING FIVE MILES.—R. N. Judd (3½ Norton), 3m. 40.8s., 81.52 m.p.h. (131.19 k.p.h.).
STANDING START TEN MILES.—R. N. Judd (3½ Norton), 7m. 40.2s., 78.23 m.p.h. (125.69 k.p.h.).

CLASS E (1,000 c.c.).
FLYING KILOMETRE.—C. F. Temple (7-9 Harley-Davidson), 22.4s., 99.86 m.p.h. (160.71 k.p.h.).
FLYING MILE.—C. F. Temple (7-9 Harley-Davidson), 37s., 97.50 m.p.h. (156.57 k.p.h.).
FLYING MILE (ONE WAY).—C. F. Temple (7-9 Harley-Davidson), 36s., 100 m.p.h. (160.93 k.p.h.).

CLASS G (1,000 c.c., SIDECARS).
FLYING KILOMETRE.—C. F. Temple (7-9 Harley-Davidson sc.), 29s., 77.14 m.p.h. (124.13 k.p.h.).
FLYING MILE.—C. F. Temple (7-9 Harley-Davidson sc.), 49.1s., 73.32 m.p.h. (118 k.p.h.).
FLYING KILOMETRE (ONE WAY).—C. F. Temple (7-9 Harley-Davidson sc.), 27.8s., 80.47 m.p.h. (129.50 k.p.h.).
FLYING MILE (ONE WAY).—C. F. Temple (7-9 Harley-Davidson sc.), 47s., 76.60 m.p.h. (123.26 k.p.h.).

STANDING START, TEN MILES.—C. F. Temple (7-9 Harley-Davidson sc.), 42.8s., 68.86 m.p.h. (110.82 k.p.h.).

* Mean speed records.

**IN THE BALLARD CUP TRIAL.**

The lowest powered sidecar in the trial was the 2½ h.p. Hawker, piloted by L. Peatty.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

WHERE ARE THE FORECARS?

? Is there on the market a three-wheeler on the principle of a bicycle with the car in front, as an alternative to the sidecar? It would seem that two passengers might be carried without making the combination wider than the usual plan. The expense should be little or no greater. This plan would obviate the fault of bad distribution of weight and strain involved in the sidecar construction and provide better mud protection. It is possible, of course, that the steering presents difficulties which I do not understand. The machine would be something on the lines of the common tradesman's pedal tricycle.—W.G.B.

The arrangement you describe was used to a large extent in the early days of the motor cycle movement; but all the original tricycles and tricars have ceased to exist, as they were not very safe at speed and frequently overturned on corners; at the same time, a successful modern design on these lines should be possible.

ERRATIC RUNNING OF A.I.V. TWIN.

? I have just bought a 1911 2½ h.p. Douglas, and have overhauled it, but now find that on starting it fires on one cylinder only for about twenty yards and then on both pretty regularly. This appears to be the fault of the magneto. The points break equally for each cylinder, the cables have been changed, but not the brushes, for they seem to be all right. Can you suggest anything? The spark occurs on top centre, two-thirds retarded. After the throttle has been opened half-way no more power can be obtained. Is this the fault of the jet being too small? What m.p.g. and m.p.h. should this engine attain?—H.Q.

If the machine runs perfectly on both cylinders after covering about twenty yards it would appear that the magneto is in quite good order, and we are inclined to believe that the trouble is due to an air leak in the induction system of the cylinder concerned. Make sure that the induction pipe union is tight. We assume that both inlet valve springs are of equal tension. One stiff spring might cause the trouble. Probably a slightly larger jet would allow the engine to respond to wider throttle openings. 80 to 100 m.p.g. If in ordinarily good condition, the machine should be capable of doing 40 m.p.h.

FITTING AUTOMATIC DRIP FEED

? With a Best and Lloyd drip feed, is it necessary to fit a non-return valve on the bottom of the front cylinder where the oil is led in? If not, how is the oil prevented from being blown back into the sight glass?—J.P.B.

It is unnecessary to fit a non-return valve where the oil pipe enters the crank case, as there is a small check valve at the base of the sight feed chamber. When this valve is working correctly there will be no blow-back into the sight feed chamber.

POSITION OF LICENCE HOLDER.

? Will it be in order for me to attach the licence holder to the top tube of my motor cycle, over the tank, with the glass facing to the rear side? My handle-bars are already crowded, and I have an A.A. badge on the front number plate; and, anyhow, I prefer to be modest about having paid the tax, so would choose an inconspicuous position for the licence, provided it complies with the law.—F.G.H.

There is no objection to your fitting the licence holder on the top tube of your machine, provided that it can be seen readily from the rear side of the road. A better position would be on the side of the front forks.

A LIGHTWEIGHT FOR TOURING.

? I am proposing to get a motor cycle, and find a difficulty in deciding whether a 2½ h.p. or 2½ h.p. engine would suit my requirements best. I am a lightweight (under 10 st.), and I shall use the machine chiefly for short journeys, but twice a year I shall require the machine to do a journey of 350 miles in three days. I shall not want to go very fast, and shall be quite content to average 20 m.p.h. Is a 2½ h.p. lightweight capable of this, or would I have to get a 2½ h.p. machine? I want reliability, economy of upkeep, only moderate speed (35-40 m.p.h.) is the most I should want to go, and simplicity.—P.K.W.

Any modern machine from 2½ h.p. upwards should be capable of doing a 350-mile journey in three days. Incidentally, you will no doubt have to be content with a 20 m.p.h. average with any lightweight machine, as this is quite a reasonable speed, and probably requires a machine capable of a 35 m.p.h. maximum.

OIL SPRAY THROUGH PULLEY.

? A few weeks ago I bought a 1912 Rover, which is going very well, except for oil leaking out of a hole in the pulley side of the crankshaft. This hole, I think, is for crank case release; but I am not sure whether it should have a ball valve, or some such fitting. The cylinder bore, piston, and rings are all in good order.—W.J.A.

A ball valve is not fitted in the crankshaft release, and if oil blows through the shaft it would be advisable to fit some shield which would prevent it spraying over the footrests.

TWO-STROKE MATTERS.

? (1.) What are the maximum revs. of the 350 c.c. two-stroke Precision engine on a level road geared 5 to 1 and carrying a rider weighing twelve stone? (2.) What are the maximum revs. geared 8 to 1? (3.) When driving, the engine suddenly gives a violent jerk, as though caused by a too early spark; this often occurs when having run only a few minutes. I know, for a fact, the magneto timing is absolutely correct. (4.) When driving, and attempting to drive hard, the engine will not respond to full throttle, even along the level. This may continue for perhaps a mile, when quite suddenly it will pick up and go away with a burst; this occurs with a clean engine. The feeling is that pre-ignition is happening. (5.) What, in your opinion, is the mileage covered before it is necessary to decarbonise? and why should the top piston ring carbonise up very quickly?—S.P.

(1 and 2.) These are questions which should be referred to the makers, as they will supply you with definite figures. We should imagine, however, that the engine should be capable of reaching 3,500 r.p.m. when running on the level under the given load. (3.) This appears to be a case of plug pre-ignition. (4.) This may be due either to temporary stoppage in the oil supply or to the flow of petrol to the carburettor being partly obstructed. (5.) Probably 800 to 1,000 miles. The carbonising of the top piston ring is a very usual trouble with air-cooled two-stroke engines. It may be prevented to some degree by using a ring which is a comparatively loose fit in its groove. We should strongly recommend you to use a plug specially made for two-stroke engines.

LOW PETROL CONSUMPTION.

Having read the book "Two-stroke Motor Cycles" compiled by the staff of your excellent paper, I gather that 100 m.p.g. is good for a small two-stroke machine, but that one make you know of would do somewhere around 130 m.p.g. I want to know if you can disclose the name of the machine, as petrol consumption is a big thing to watch nowadays.—H.R.H.

Connaught, Levis, and Velocette machines have recorded figures such as those mentioned in various petrol consumption trials; indeed, we believe that the makers of the Levis machines would guarantee from 100 to 120 m.p.g. with their single gear models.

"EARTHING" THE SPARKING PLUG.

I find I get a much "fatter" spark from the plug placed on top of the engine if I connect up from one of the (Dixie) magneto holding bolts and one of the engine bolts. Can this injure the magneto if run at speed? My magneto is mounted on an aluminium base, and I conclude that the current cannot return to the magneto as readily through the engine and frame as it does when connected up as above.—J.F.H.

The direct "earth" connection between the magneto and plug cannot do harm, as in any case there must be a return circuit, otherwise there would be no spark at the plug.

DYNAMO EXPERIMENTS.

I have been contemplating converting a spare magneto into a dynamo for accumulator charging for electric lighting, as I understand that this is possible, provided the necessary alterations are made, i.e., rewinding the armature with suitable wire and replacing the slip ring by a commutator; but, in referring to a book on dynamo winding, I learn that the H type armature is unsuitable for accumulator charging, as when it is in a certain position it would short circuit the accumulator. I should therefore be much obliged if you would tell me: (1.) If this is correct? (2.) If it is at all possible to charge an accumulator in this way? (3.) If so, what would be the voltage and amps. required to charge two 4 volt 20 amp. accumulators? (4.) Should they be connected up with the dynamo in a circuit or each be connected direct? (5.) If it would charge quicker and better to have one accumulator of 6 volts 30 amps.—L.W.

(1.) The H section armature is not the most efficient variety for accumulator charging; but the short circuiting of the batteries can be avoided if there is a sufficient gap between the commutator segments in order to prevent the latter from being bridged at any position by the brushes. (2.) It is certainly possible to charge an accumulator this way. H section armatures for lighting generators are actually used for motor cycle lighting by more than one prominent firm. (3.) The output should be about 3 amps. at 4 volts. (4.) The accumulator and lamps should all be connected in parallel and not in series. (5.) It is very doubtful if you could get a pressure of 6 volts with a generator of this type.

Important Dates.

Sat., Sept. 17th—
Grand Prix Race for Cycle Cars.
Sat., Sept. 17th—Midland Centre A.C.U.
Open Hill Climb.
Fri., Sept. 23rd to Tues., Sept. 27th—
Anglo-Dutch Reliability Trial.
Sat., Sept. 24th—M.C.C. Sporting Trial.
Sat., Oct. 1st—Doncaster and District
M.C.C. Open Speed Trial's.
Mon., Nov. 28th to Sat., Dec. 3rd—
The Olympia Motor Cycle Show.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—
Scottish Car and Motor Cycle Show.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"T.D." (Durham).—Chain guards instead of standard cases on P. and M.: Do chains wear badly, and is gear affected in any way?

"E. B. McL." (Helensburgh).—3½ h.p. 1921 Rudge Multi: Speed, reliability, efficacy of gear on hills, and consumption compared with previous models.

"J.T.G." (Shipley).—3½ h.p. or 7-9 h.p. Rudge Multi: Reliability, wear on belt, and slip in wet weather.

"B.W." (Birmingham).—Economic power unit: Attachment for cycle, all-weather use, climbing, reliability, etc.

"A.H." (Leicester).—P.V.-Villiers: Reliability, climbing, comfort of spring frame, pillion riding.

"R.B.S." (Keighley).—American-Excelsior and Henderson: Speed, reliability, and petrol consumption.

"F.W.W." (Liverpool).—A.V. Monocar: Climbing, braking, reliability, and oil and petrol consumption.

"K.H.B." (Weybridge).—1921 2½ h.p. A.J.S.: Reliability, climbing, speed, consumption (oil and petrol), gear box, and transmission.

A Programme Amendment.

In the recent Midland Centre hill-climb at Penkridge Bank, already reported in our columns, A. R. Evans, who achieved some remarkably fast times, was mounted on a 2½ h.p. New Imperial-Jap. His mount was specified in the programme as a 2½ h.p. J.A.P.

Catalogues Received.

Taw Manufacturing Co., Ltd., Campsbourne Works, High Street, Hornsey, London, N.8: A folder describing several varieties of side lamps suitable for fitting to sidecar wings or lamp-brackets; also three excellent forms of tail lamps and a handsome head light.

Found on the Road.

A motor cyclist, who was recently obliged by a supply of petrol at the roadside near East Grinstead from Mr. C. J. Crawford, left some of his property in the latter's sidecar. The articles are awaiting him at 20, Sportsbank Street, Catford, London, S.E.6.

A sidecar cover off a (?) Royal Enfield machine, driven by a lady, was picked up, on the 4th inst., by Mr. J. W. Britton, of Glenroyde, 71, Holly Lane, Erdington, Birmingham, on the Stratford-Birmingham road.

A Note for Traders.

An attractive showcard illustrating Schrader tyre valve specialities is available, and may be obtained on application to A. Schrader's Son, Inc., Victoria Road, Willesden, London, N.W.10.

The new chain-driven Rudge singles in the A.C.U. Six Days Trials. R.B. Ewens and F.T. Sibley on a typical stretch of good going in the West Country. The latter rider gained a gold medal.

APOLLO ^{REGD}

tubular box spanners.

The motor cycle set No. M.C. 23.

This handy little set, ready for immediate use, makes small adjustments a pleasure. Consisting of three spanners to fit six sizes of nuts, a screwdriver, and a telescopic tommy-bar; the set, when fitted into its neat little case, is a model of compactness

Prices again reduced:

Price per set (including inland postage) 3/1½; or in leather case, 4/1½.

Obtainable from all agents

FOX'S PUTTEES

—unquestionably the ideal leg-covering for the Motor Cyclist.

They give full weather protection; they are dust-proof; they provide perfect ventilation, and thus, whilst retaining the natural warmth, do not create heat.

Hygienic, comfortable, and always smart.

Regulation Heavy-weight, 9/- per pair.
Extra Fine Light-weight, 11/- per pair. Extra Fine Light Shade, 12/- per pair.

CAUTION.—See that the name 'FOX' is on the metal discs (right and left), attached to every genuine pair of FOX'S New Non-Fray Spiral Puttees.

Patentees and Sole Manufacturers:
FOX BROS. & Co., Ltd. (Dept. N), Wellington, Somerset.
"F.I.P."—Fox's Improved Puttees. "Non-Fray Spiral"

FOX'S F.I.P. PUTTEES

Made in various weights and shades.

In answering these advertisements it is desirable to mention "The Motor Cycle."

ALLEN-BENNETT MOTOR CO., LTD.

THREE MONTHS' GUARANTEE.

Every second-hand machine sold by us, whether it be a 1914 or 1921 model, carries our guarantee of mechanical fitness for 3 months from date of purchase, i.e., to replace any faulty parts. Any machines sent on 24 hours' approval or on "The Motor Cycle" deposit system. We control our own Extended Payment System, and machines may be purchased by paying a quarter down, THE BALANCE PLUS 7½% payable in 12 monthly instalments. Please note we do NOT charge interest on the total. All payments are made direct WITH US. We give below a selection from our stock, and should be pleased to send full list of new and second-hand machines, post free on request

DOUGLAS, 1916-17, 2½ h.p., 2-speed, semi-T.T. bars, re-enamelled and plated, all lamps, horn, tools, etc. New condition	£57 10
ALLON, 1920, 2½ h.p., 2-speed, clutch and kick-starter, Cowey speedometer, lamps, horn, legshields. As new throughout ...	£55 0
RUDGE, 1914, 3½ h.p., T.T. long exhaust, re-enamelled, in perfect condition, very fast. Bargain	£40 0
HARLEY-DAVIDSON 1919 Combination, 7-9 h.p., 3-speed, clutch and kick-starter, re-enamelled, all lamps, horn, etc., thoroughly overhauled. End-of-season bargain	£110 0
HARLEY-DAVIDSON 1920 de Luxe Combination, Splitdorf dynamo lighting, de Luxe Sidecar, owned by one of our staff, perfect outfit in every respect	£180 0
DOUGLAS, 1916, reconstructed, 2½ h.p., 2-speed, all lamps, horn, tools, etc., run very few miles since left our reconstruction shops. Tax paid	£57 10
DOUGLAS, 1917-18, 2½ h.p., overhauled, re-enamelled, and plated, exceptionally smart and very fast, fully equipped with all lamps, horn, tools, etc. Tax paid	£60 0
TRIUMPH, 1914, Mabon gear and clutch, coachbuilt Sidecar, screen, lamps, horn, speedometer, splendid condition both mechanically and in appearance. Snip	£55 0
CALTHORPE, 1921, J.A.P. 2½ h.p., 2-speed, clutch, all lamp, horn, as new, run under 500 miles	£55 0
TRIUMPH, 1919 (late), 4 h.p., 3-speed, clutch and kick-starter, Whiteley Sidecar to match, Easting screen, all lamps, horn, etc., new condition throughout	£115 0
RADCO, 1920, 2½ h.p., 2-speed, Lucas lamps, horn, run under 700 miles	£42 13
1920 NEW HUDSON, 2½ h.p., 2-speed, lamps, horn, tools, etc., practically new. Snip	£55 0

1918 ROYAL RUBY 8 h.p. Combination, re-enamelled and plated as new	£120 0

READ THIS—

Alconby's Hotel, Exeter, 13, & 21.

Dear Sirs,

Will you please send me to the above address a 0.0 English 28 x 2½ for my passenger tyre. I purchased a similar tyre from you on the 17th or 18th June last, which has proved wonderfully in every way. I fitted it to the back wheel of my motor bike, and it has run 3,000 miles since then without a puncture.

I have been on some of the worst roads in Southern England, and am immensely pleased with it.

Yours faithfully,
C.C.P.

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the best out of them.

ACTUALLY AT HALF PRICE.

Size.	Pattern.	Our Price.	List Price.
26 x 2	Touring 3-ply Rubber Studded	23/-	46/-
"	Passenger 4-ply Rubber Studded	26/6	53/-
26 x 2½	Touring 3-ply Rubber Studded	24/6	49/-
"	Passenger 4-ply Rubber Studded	27/9	55/6
28 x 3	Racing, Rubber Bars and Studs	50/6	100/6

Whatever tyre mileage you are satisfied with these tyres are "good for more."

We guarantee these Covers to give a minimum mileage of 3,000 miles and will replace any proving faulty on this basis. These goods are sent on 7 days' approval against remittance. Carriage paid. For particulars of our "sporting offer," see opposite column.

FREE To all purchasers of goods from this and opposite column, we are prepared to give with every order a pair of our *Usihon* Solepieces. Please mention size required for fitting to boots.

"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate. Complete Outfit, List No. 30/1, Price £5 5 (If tail lamp is not required, deduct 12/6).

"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. All our Accumulators are specially made to stand vibration. Ordinary accumulators are never satisfactory for motor cycle work. The hardwood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc. Complete Outfit, List No. 30/2, £7 7 0.

DYNAMO & SWITCH BOX

(Write for List No. 7.)
4.6 volts 20 watts. List No. 30/8, Price £7 10 0

CAMEO WINDSCREENS.

Complete with Side Valance £60/-
Or without Valance, 55/- Carriage 2/-

EASTING WINDSCREENS - £4 10 0

Carriage and Packag 4/- extra.

TAYLOR THIEF - PROOF LOCK.
QUICKLY FIXED, SIMPLE, SECURE.

Consists of a flat piece of steel bent into the shape of a hook with a hole at the opposite end. The hook is passed round one member of the front forks, while the other end is secured to the opposite side by means of an ordinary padlock, the hasp of which is slipped through the hole. In that position the motor cycle cannot be wheeled, and it would take an expert thief some time to cut through the steel bar with a hacksaw. Price 7/6. Carriage 6d.

When ordering, state make of machine.

MOTOR CYCLES FOR SALE.

Zenith.

DON'T Read This!

IT won't interest you unless you have a Zenith, or wish to purchase.

MY advice to owners is, "Prepare for the winter now, by sending your Zenith to Allan Gruzelier."

FOR a small sum I will examine your machine, de-carbonise, etc., and make it roadworthy for the bad weather, and save you hours of worry.

MY advice to prospective purchasers is to read the following: 1922 Zenith-Bradshaw, £118; 1921 8h.p. sports model, £128; 1921 5h.p. sports, £118; 1921 5h.p. countershaft, £131; 1921 8h.p. combination, £177; these are all new; the following are second-hand; immediate delivery of all. 1921 90 bore o.h.v., very small mileage, £130; 1921 8h.p. Magdyno set, all on, £135; 1921 standard combination, all on, £135; 1921 5h.p. sports, all on, 3 weeks old, £110; 1920 5h.p. sports, all on, £85.

ALL these machines are in excellent order, and you may be assured of the right article when you purchase from the Zenith Expert: Allan Gruzelier, Ulster Chambers, 166, Regent St., W.1. Regent 205. [8495]

ZENITH 2½h.p. Flat Twin; 69 gus.—Below.

ZENITH 8h.p. Sporting; £108.—Below.

ZENITH 8h.p. Countershaft; £116.

ZENITH 6h.p. Countershaft; £110.

ZENITH 8h.p. Combination, complete with hood and screen; £140. All machines 1920 models, just received from works and fully guaranteed.

M.A.A. Ltd., Zenith Service Depot, 89, Wigmore St., W. Zenith Bradshaw, 1922 models; early deliveries from the authorised Zenith agents, M.A.A. Ltd., 89, Wigmore St., W. 'Phone: Mayfair 5598. THIS WEEK'S ATTRACTIVE OFFERS

EXTRA LARGE TOOL BAGS,

Metal Armoured, two straps, first quality for 4 h.p. Douglas machines. Usual price, 20/- My price 12/6.

SMALLER SIZE BUT SAME QUALITY for 2½ h.p. Douglas machines. Usual price 11/- My price 9/- There is room in the large bag for all spares. Guaranteed to fit Douglas Carriers.

AIR - COOLED LODGE PLUGS

suitable for high speed, high compression engines. Every Plug guaranteed. The best Plug for your Touring engine or Sports Model Douglas. Only a limited number. Usual price 8/6. Price now 5/-

SPECIAL BARREL VALVE SPRINGS

for 2½ h.p. DOUGLAS, unbreakable, and very flexible, giving increase in power. Touring, 1/6 per pair. Racing or Hill-climbing—much stronger—2/- per pair.

1,500 of these SPECIAL VALVE CAPS

have already been sold. Customers write, "They are the goods." Prevent knocking, drying up, and lets your engine retain its power on long hills. The T.T. riders used them, also the Grand Prix winners. They are made for 4 h.p. and 2½ h.p. DOUGLAS engines and add to the appearance and efficiency. For the sake of a few shillings you should not be without them. Only 4/- each.

TWIN RINGS.

Do you appreciate the extra power, oil economy, greater compression, longer life and better cylinder surface you get by fitting these rings? They are made under a patented process. Users say "the difference is remarkable." 2½ h.p. size 1/6 each. 4 h.p. size 1/8 each. In the 4 h.p. engine the power increase is wonderful, and the reduction in oil consumption very pronounced.

THE NEW DESIGN SADDLE.

My offer of these wonderful saddles can only last for a short time. They give a natural seat, low riding position, and do not foul the side-car stay on the 4 h.p. Douglas. Made of solid leather, and have adjustable springing. Only 25/- Compare this price with similar offers.

13/- per Cover and 2/-

per tube saved by buying this wonderful Extra Heavy Passenger Type Super Studded Hutchinsonson from me. They are new stock and guaranteed—money refunded if not satisfied—only a few left. H.S. writes—"The finest tyre value I have ever had"—NOT W.D. Stock. 1921 Douglas Latest Instruction Books, 1/6, by return of post.

2½ h.p. Exhaust Valves made of the finest nickel steel, guaranteed. My price only, 3/.

4 h.p. Valves of nickel steel alloy (not mild steel like most cheap ones on the market). My price 4/- only. E. I. C. Magneto. Service Depot for West of England. Any part for an E.I.C. in stock.

REPAIRS.—If you want repairs executed reasonably, quickly, and efficiently, it will pay you to write me.

SPARES.—Any Douglas Spare part by return of post.

W. G. CORAM,

Official Douglas Agent,

140, Victoria Street, BRISTOL.

TRADE:—Write me about machines, repairs, or accessories; my discounts are right.

BODIES.

Cycle Cars and Sidecars.

IT has become a habit in some quarters to regard the high-powered sidecar as doomed, and that in the near future cycle cars will materialise to take its place. For ten years this subject has been discussed, and during the present year there has been evidence that it has interested manufacturers of both cars and sidecars.

Production plans for 1922 are now well forward, and from an intimate knowledge of manufacturers' intentions we can say that the demands of those who await the advent of a small four-wheeler at the price of a sidecar outfit will again remain unfulfilled.

The reason for this is not hard to seek. Despite all that has been said to the contrary, the effort, material, and labour that produces a sidecar outfit will not produce a miniature four-wheeler of the same standard of quality and performance. Therefore, motor cycle manufacturers are not justified in abandoning a proved proposition in order to produce an almost entirely new type of vehicle.

It should be remembered that, even in pre-war days, the cycle car's place in the world of wheels was not as a sidecar substitute, but rather as a bridge between the sidecar and the car. The development of the cycle car is now history, for, as was prophesied by *The Motor-Cycle* ten years ago would be the case, only those following accepted car practice with weatherproof transmissions have survived. The *post bellum* costs of these light cars rose to nearly three times the amount for which they could be obtained before the great upheaval. Motor cycles, too, have increased in cost, although not to the same extent, which fact is responsible for the price gap between sidecar and light car being every whit as wide as was the case in 1912 between the sidecars and the large cars. Therefore, the position remains practically the same as it did a decade ago. Obviously there is still a large potential market for a type of runabout between the two types of vehicles now in greatest use, and, to cater for this demand, auto-

mobile manufacturers in 1922 are producing miniature cars which will be obtainable at figures ranging from two to three hundred pounds. These vehicles will not be cycle cars, however, even if we interpret the term in its very broadest sense. According to the governing bodies, a cycle car is a vehicle with an engine not exceeding 1,100 c.c. capacity and a maximum weight of 772 lb., and few, indeed, of the new miniatures will come into the latter limit. For another year at least, the sidecar's position as the most economical form of motoring for two or more persons will be unassailed.

Quality of Finish.

NOW that it becomes increasingly evident that an all-round reduction of the cost of commodities is taking place, we may well ask if the production of motor cycles could be rendered any less expensive.

During the war innumerable machines were produced with "W.D. finish," i.e., no plating, and no decoration; a drab enamel being spread over all parts of the machine. This coating of paint was not particularly pretty, but it served its purpose, giving a reasonably hard wearing and weatherproof finish suited for rough conditions.

Supposing that a maker decided to eliminate expensive finish and, instead, treat his completed machines with an all-over coating of black, grey, or green paint in place of the more usual plated and stoved machine, with its lined and decorated tank, a very considerable saving would be effected, for, apart from the economy of the method itself, a number of expensive labour charges on the machines would be eliminated.

That section of riders which favours the motor cycle as a sporting luxury may well prefer the highly finished type of machine in which pride of ownership may be taken, but the average user of the hack machine might well regard with favour the saving of several pounds of the initial cost represented by the finishing methods suggested.

Paternity.

I KNOW now what the lady novelists mean when they describe the ineffable pride with which the young papa surveys his first offspring as the nurse lays it in his timid arms. For have I not actually received a sample prop stand—the first of many in preparation—after years of clamouring for this useful accessory. It weighs 2 lb. 4 oz., and is made by Taylor's Garage, of Forest Road, Southport. Mechanically, it is quite simple—a telescopic leg, horizontally hinged to a split lug, which is bolted to the near side chain stay of the bicycle. A collar on the head of the leg contains three notches, any of which can be locked by a tiny spring pedal. One notch is located so as to hold the leg vertically upwards out of the way; the remaining notches give you a choice of angles in the active position. The only criticism which I can make is that dirt and dust may cause the hinge and the pedal to work stiffly, and that I rather fancy certain alternative designs may weigh less. Meanwhile, I am using the stand with considerable gusto.

A New Sturmey Gear Box.

LOTS of cycle car builders—both amateur and professional—are sitting up on their hind legs begging for early deliveries of a new gear box which the Sturmey-Archer people are bringing towards the production point. It will embody three speeds and a reverse, and should prove invaluable to the motor cycle trade. Cycle car folk naturally have the first claim on it, as it will save them having to carry their tails round when they want to reverse in a narrow lane; sales managers always say that it is child's play to lift a cycle car round, but personally I would as soon drag a fainting woman out of the gallery of a theatre, for most of the grips which a cycle car tail provides are extremely sharp, and liberally smeared with dirt and oil. But I suppose the sidecar people will also be after the new gear box, and that our 1922 motor cycle gymkhanas will list a novelty on the programme—racing backwards on sidecars.

Possibly two-wheelerists of the Albert Milner type will even want the new box on their solo mounts. I remember reading years ago—in the *Yorkshire Post*, I think—that some tyke was open to challenge the world at riding a motor bicycle backwards from Ilkley to Keighley. Sooner him than me, as the poets say.

Two Machines for One Tax?

ONE or two readers have lately dipped their nibs in mingled gall and wormwood to complain to me that an unpaternal Government insists on their paying two taxes if they own two machines at the same time, even though anatomical considerations prevent their riding the pair simultaneously. I refuse them any sympathy. We have millions of unemployed, and as a nation we are tolerably insolvent. Ought not a heavy burden of taxation to plunk on those few individuals who can afford to keep more than one 'bus? I trow so. If the complainants had asked me why they should pay double insurance premiums, I should have felt more tenderly towards them. But I presume that insurance societies find it difficult to believe that one of the machines will always rust in its shed, whilst the other takes the road; and possibly they find such instances even more difficult to prove.

That Opprobrious Word, "Pushbike."

I HAVE received several more letters from pukka cyclists anent their furious objection to the word "pushbike," imploring my aid to keep it out of our columns, and to whittle down its use amongst motor cyclists in general. None of the writers furnish any reasons for this quite irrational prejudice, though I notice it is strongly reflected in the columns of the cycling press. I can only presume that as the pedal cycle preceded the motor cycle, its devotees consider that it has the prior claim to the plain and unadorned name of "bicycle," and that they further consider the term "pushbike" is derisive. Commonsense compels me to deny both implications. No doubt the first and original pudding was compounded of nuts and berries, but this does not put Mrs. Ixion in the wrong when she

Occasional Comments.—

invites me to eat "pudding" on Christmas Day. Moreover, we rightly attach prefixes to the word pudding, now—there are thousands of different sorts of pudding; and why should we not do the same to "bicycle"? That "pushbike" is derisive, I entirely deny. If it has any emotional implications, they are of an admiring character; for it is undoubtedly heftier and more manly to rely on one's muscles than on an engine. There is not an atom of doubt that, when the veteran cyclists have died out, the term "pushbike" will be freed from the false associations with which a few survivors of the early motoring days have invested it; it will be added to the national vocabulary with such terms as stunt, camouflage, garage, chauffeur, and the like, some of which have already changed their meaning ("chauffeur" used to mean a wealthy owner-driver twenty-five years ago). For the present, since I have many cyclist friends, I will try to avoid the word; but I warn cyclists that they may as well try to suspend the action of gravity as to rob the language of such an innocent and handy abbreviation.

With a Silent Hooter.

I HAVE been defying the law of the land in quite a new direction lately, for an item of my electric equipment gave out, and forced me to drive for a day or two with the hooter out of action. I felt extremely uncomfortable at first, but gradually

came to two conclusions, viz, that my normal driving methods are a shade too rash, and that the main utility of a hooter lies in overtaking other traffic. At most blind spots the utility of a hooter is minimised by two obvious factors, first that it is seldom audible to other traffic (being blanketed by walls, drowned by engine noises, etc.), and second that many motorists omit the hoot, so that even if hoots were always audible, silence does not mean that the road is clear.

It is usually stated—even in text books—that the foundation principle of safe driving is to go so slowly that you can pull up within the limits of vision. This is not quite good enough. Consider the sketch in question. If both cars were driven on this plan, the road being too narrow for passing, a mild collision must result. If either car is driven a little faster the collision will be more serious. If both cars are driven on the liberal side a hefty smash may result.

The meditations inspired by my silent hooter have led me to revise the ancient rule. I now drive at a speed which permits me to pull up *within half the distance covered by my vision* at any moment.

Labouring the Obvious.

THE fact is that we escape many accidents by sheer luck. For under the circumstances suggested in my last paragraph, everything depends on whether the oncoming traffic be fast or slow. If it takes the form of sheep or a horsed-trap or perhaps even a cyclist we shall have room to stop safely; but if the oncoming traffic be engined, the odds are all in favour of a collision. Now that the number of motors of all kinds is growing so rapidly, the odds in favour of our leaving too small a margin for an emergency pull-up are vastly increased. *The driving methods which spell safety in 1914 spell danger to-day.* I have increased my safety margins quite appreciably during the past year, and I recommend most of my readers to do likewise.

Overtaking on Corners.

THE worst and the commonest form of bad driving observable on the roads consists of overtaking other traffic on a corner. The A.C.U. since the beginning has included in the Six Days rules a threat to disqualify any rider who commits this crime, but in practice the rule is a dead letter, and I am sorry to say that it is also a dead letter with thousands of the new generation of motorists, and also with the less intelligent people who drive horsed-vehicles. If anti-motorists had more sense they would recognise that this offence is a thousand times more dangerous than express train speeds on the open road. For example, last week I was negotiating an easy bend along a road where there is comfortable space for two cars to pass each other. Luckily I took it very gently. For just when my machine was making a tangent to the arc of the corner, I found the road blocked from hedge to hedge by Madame driving a pony cart, with assorted off-spring riding miniature pedal cycles on either side of her equipage. No doubt had I been travelling too fast I should have made the only reparation in my power by ramming a stone wall in lieu of committing wholesale kidslaughter. As it was, I pulled up with yards to spare. Madame, as you will all guess, scowled at me as if I had been Jack the Ripper; whereas my part in the affair was that of a sane individual, and hers that of a criminally reckless fool.

Music Hath Charms?

A WAGGISH friend of mine has reached the age at which slumber is no longer automatic. He has—perhaps foolishly—purchased a house on a mainish kind of road. It is infested by baby two-strokes. He sends me the following score of the kind of lullaby with which our fraternity annoy him:

Not unnaturally, he thinks that Dr. Low ought to be given the O.M. for inventing the audiometer, and he is quite savage with the trade for criticising the A.C.U. penalties on noisy exhausts in the Six Days. His postscript remarks pettishly that he once had an Indian, which did not decelerate very perceptibly when its cut-out was shut.

THE 2 $\frac{3}{4}$ h.p. FRANCIS-BARNETT.

SPECIFICATION.

ENGINE: 2 $\frac{3}{4}$ h.p. single cylinder

J.A.P. (70×76 mm.=292 c.c.).

LUBRICATION: Hand pump.

CARBURETTER: Brown and Barlow.

MAGNETO: C.A.V.

GEAR BOX: Sturmey-Archer two-speed and kick-starter.

TRANSMISSION: Coventry chain and Dunlop belt.

WHEELS: 26×2 $\frac{1}{2}$ in., Dunlop tyres

FORKS: Brampton Biflex.

FRAME: Rigid.

WEIGHT: 188 lb. Tax 30/-

PRICE: £85.

ALTHOUGH the 3 $\frac{1}{2}$ h.p. single is still perhaps the most popular type of solo mount in this country, it is being run a close second by the 2 $\frac{3}{4}$ h.p. machines.

During the last year or two this type has indeed proved itself to be both speedy and thoroughly reliable, as witness the excellent performance made by the tiny J.A.P. engine in the T.T. and recent 500 Miles Race; these successes, coupled with the economical running of the type, will undoubtedly continue to gain for it the favour of many riders.

Glancing over the features of a dozen well-known lightweights, the similarity of the specification is striking, although to the average eye the machines look quite different. The 2 $\frac{3}{4}$ h.p. J.A.P. engine, Sturmey-Archer two-speed gear box, chain-cum-belt drive, wheel sizes, etc., convey the idea that such machines must be exactly similar in performance, and true, it is often difficult, when testing a variety of makes, to find any outstanding characteristic which would make one lean toward any particular one.

It was with this problem in mind that the writer recently took a standard 2 $\frac{3}{4}$ h.p. Francis-Barnett for

There are several commendable features about the 2 $\frac{3}{4}$ h.p. two-speed Francis-Barnett, among them being the saddle tank, a quickly adjustable rear brake, and a particularly neat chain cover.

Road Tests of New Models.

a test run over the Cotswold Hills one very hot Sunday afternoon. This little mount, which is a typical example of the sturdy British lightweight, is familiar to most readers, so that a detailed specification is unnecessary—the chief characteristics being the saddle tank, short leg shields, and easily adjustable rear brake.

Leaving the garage at noon, the main road was followed to Broadway *via* Stratford, prior to trying the machine on the well-known trials hills of Saintbury, Willersey, and Rising Sun. The Francis-Barnett behaved

very well, and it was not long before one realised that its real charm lay in its general handiness and controllability—the riding position, distribution of weight, and wheelbase length all combining to give the rider a sense of perfect security and comfort.

One becomes accustomed to any type of machine, but there are some mounts upon which one immediately feels "at home." The Francis-Barnett is one of them.

Turning off the main road at the familiar stone cross, we were soon humming up Saintbury, bottom gear being engaged about half-way up, the engine pulling well thereafter with plenty in hand. Willersey, the corresponding descent, provided an excellent opportunity for testing the brakes, and it was found possible to bring the machine to a dead stop on the steepest portion, the rear brake being exceedingly powerful.

The riding position of the Francis-Barnett is particularly comfortable, and one immediately feels at home on the mount.

testing the steering that the machine pulls to one side, and in some cases starts to wobble immediately the bars are released. This form of riding should not ordinarily be indulged in for obvious reasons, but it served to prove that the machine in question steers perfectly without the slightest wobble even when passing over a bad section of the road. The wide and smooth tank forms a very comfortable grip for the rider's knees.

It is after using such machines as this, after the heavier type, that one appreciates the vast strides made in lightweights in recent years.

Summing up, the Francis-Barnett is a well-made, speedy, and thoroughly reliable little solo mount, but undoubtedly that which appeals to one most is its perfect controllability, a quality bringing it into the front rank of British lightweights.

On the way to Cheltenham a stop was made to run down the Rising Sun Hill (Gambles Lane), and attempt to reascend it, back to the main road again, over the steep and loose gradient, a clean ascent being made without any fuss.

In spite of the fine weather very little traffic was encountered between Stratford and Cheltenham on both outward and return journeys, and with a clear road it was found possible to ride mile after mile without touching the bars; this is, of course, possible on other types, but how often does one find when

GRAPHITE FOR CHAIN LUBRICATION.

MUCH interest is shown from time to time in the correct lubrication of bearings, and there are different types of oil recommended for the various engines, gears, and axle bearings on the market, but very little has been authoritatively put forward for chains, except total enclosure in an oil bath or cleaning with paraffin and soaking in grease.

The former method is, of course, the best, but, having a machine with open chains, I have been led to investigate a few samples of graphite.

First, I tried ordinary powdered graphite, and on analysis found that it contained no less than 24% of silica or sand. Ordinary domestic blacklead was then tested, and found to have 18% sand; flake graphite, recommended by a local garage, had 4.5% sand in it.

Still unsatisfied, samples of special advertised graphite chain lubricants were obtained. One, a fairly hard substance, contained 74.7% carbon, only 0.14% sand, and 25.1% grease. On the carbon content the percentage of sand is practically 0.2%. The other, a soft paste, was still better. It had only 0.025% sand in it, the grease was about 82.37%, and the carbon or graphite 17.6%.

Graphite is a mineral, and those who have seen the old blacklead mines near Keswick will appreciate that it may contain dirt, silica, or quartz; obviously, unless purified, it is far from an ideal lubricant, and our readers are recommended to obtain their supplies from firms of repute who evidently employ scientific control in their factories. G. J. DENBIGH, M.Sc., A.I.C.

TWO-STROKE SILENCING SYSTEMS.

Details of Various Methods of Dealing with the Exhaust Gases on Typical Two-stroke Engines.

VELOCETTE.

ALLDAYS-ALLON.

FREE exhaust, with a moderate degree of silence and absence of back pressure, is difficult to obtain on any motor cycle power unit, chiefly on account of space limitations.

On two-stroke engines the problem is complicated by the peculiarities of the type, from the fact that there is no other means of ejecting the burnt gases other than by virtue of their own tendency to expand, and the slight pressure of the incoming charge, makes it very necessary that the exhaust arrangements should be as free as they can be made. Apart from the fact that the three-port type of two-stroke engine, as used on the majority of motor cycles, has no positive scavenging action, the short time available for the expulsion of the expanded charge makes it doubly necessary that the exhaust system should be such that the gases not only have a free outward flow, but that their initial velocity shall be used to advantage in setting up a condition conducive to the complete exhaustion of the cylinder.

Considerations of frame design frequently impose limitations on the engine design, and an obtrusive front down tube may result either in the exhaust pipe being contorted to avoid it or the employment of a duplicated or branched pipe. It would certainly appear that the latter method is to be preferred; its employment, as evidenced in the accompanying illustrations, is a feature of the Dunelt and R.W. Scout machines, while duplex frame constructions permit a central, forwardly projecting pipe to leave the exhaust port on the Ivy and Scott; while long forked engine bearers allow the same freedom on such machines as the Levis and Radco. In other cases the exhaust port is rather to the side of the cylinder, or the port

CONNAUGHT.

DUNELT.

VILLIERS.

RADCO.

flange is inclined so that the pipe leaves at an angle, thus avoiding the frame tubes; this obtains in one form or the other on the Triumph, Beardmore, Allon, Villiers, and Enfield engines in particular. One unit worthy of note is the Velocette, which has its cylinder well outside the centre line of the frame, a position at once favourable for cooling and for the freedom permitted to its exhaust arrangements.

In some cases a duplex frame permits a central pipe, in others the pipe leaves at an angle. In certain instances the layout of the machine permits a large silencer to be used near the cylinder, while in other cases

the expansion chamber is connected up by an appreciable length of tubing.

Whether it is desirable that the expansion chamber should be directly connected to the cylinder or not is rather open to discussion. One or two designers appear to favour a sudden expansion of the gases, either into the silencer proper or into an auxiliary chamber; the New Scale silencer fitted to the Precision unit of the machine bearing that name is an example of the first, while the Cedros, with its bulbous exhaust port cover is in the second category.

WHARFEDALE.

CLUB COLOURS.

IT was suggested by *The Motor Cycle* last week that all motor cycle clubs should have distinctive club colours. The pennants of some of the clubs that have already adopted the idea were illustrated; and from the following letter, from Mr. J. Norman Longfield, chairman of the Yorkshire Centre A.C.U., it is apparent that the idea is shortly to be adopted by many more. Mr. Longfield writes:

"I was very pleased to see your article on 'Club Colours,' and it may interest you to know that at the last Board meeting of the Yorkshire Centre of

the Auto-Cycle Union, which was held in Leeds on August 15th, it was unanimously decided that each club affiliated to the Union in Yorkshire should have its own registered club colours.

"The club secretaries were instructed to send in to a committee appointed by the Board an application for the colours his club desire.

"The colours allotted to a club may be used in any way that club may desire, but it is considered that the great majority will carry their colours in the form of a small flag or pennant."

An Aid to Clutch Repairs.

TO facilitate dismantling the clutch on the 4 h.p. Douglas, the Cromwell Engineering Co., of 327, Putney Bridge Road, Putney, London, S.W.15, has introduced a special tool consisting of a steel disc suitably threaded and with a hexagon top, and a screw provided with a short tommy bar. To make use of the tool, the clutch release arm is removed, the low gear is engaged, and the

To aid Douglas clutch removal—the Cromwell tool.

ratchet nut, provided with a left-hand thread, is unscrewed from the clutch body. The clutch tool may now be screwed into place by means of a valve cap spanner. The centre screw is then screwed up, releasing the clutch spring pressure on the adjusting ring for the anchor plate, which can then be removed with ease after lifting the locking catch. The anchor plate and clutch plate can now be withdrawn without difficulty. To assemble the clutch the operation is reversed.

An Anti-dazzle Lamp.

IT is claimed that no light is "wasted" in the Morris anti-dazzle head lamp, which, by an arrangement of mirrors, clearly shown in the right-hand drawing, deflects all the rays forward and downwards. Provision is made for focal adjustment and for regulating the angle and length of the beam; and the reflectors hinge away from the body for cleaning purposes. The designer is F. H. Morris, 20, Gladstone Road, Sparkbrook, Birmingham.

(Left) An exterior view of the Morris lamp. (Right) A sectional drawing, showing the arrangement of reflectors and mirror, and the path taken by the rays of light.

Transmission Shock Absorbers.

WHILE the majority of firms embody some means of absorbing engine shocks on the transmission by means of some description of shock absorber, there are still several which rely upon clutch slip. To overcome these defects, Mr. J. Holroyd, of Holroyd Motors, 6, Warwick Street London, W.1, whose name has so long been associated with Blackburne engines, is marketing a transmission shock absorbing

(Left) The Holroyd auxiliary shock absorber fitted to a Norton engine. (Right) A special model for Blackburne engines (drawn on a smaller scale).

device, which is applicable to Blackburne, J.A.P., or Norton engines. His device consists of insulating the engine-shaft from the sprocket by means of rubber buffers. In the case of the Norton device, the sprocket is screwed upon the portion shown in black in the illustration, to which three pegs are screwed. These pegs are embedded in rubber buffers recessed in a disc keyed on to the engine-shaft. The whole is protected by means of a plated dust-cap, which is a push-on fit.

In the case of the Blackburne engine, the sprocket is mounted on a plate possessing three pegs, which engage with rubber buffers recessed in the flywheel.

Ventilating the Sparking Plug.

AS its name aptly implies, the special feature of the Northwind sparking plug is that the points are kept cool and clean by from 500 to 1,500 blasts of cold air per minute. This is obtained

Part sectional view of the Northwind sparking plug.

by means of a disc valve (on the top of a hollow central electrode), which is opened by the suction of each downward stroke of the piston. Big claims are made for this plug, which is sold at 7s. 6d. each by the Northwind Spark Plug Corporation, 25, Victoria Street, Westminster, London, S.W.1. The plug seems to promise certain advantages, especially when used on hot running two-stroke engines.

FOR WINTER RIDING.

An ordinary household pin may be used if necessary for extending the h.t. wire when the Sphinx universal waterproof plug terminal is used. (The Sphinx Mfg. Co., Ltd., Bradford Street, Birmingham.)

Two Formidable Welsh Hills.

Although taken on two of the worst hills in Wales, each of these pictures (of competitors in the Liverpool M.C. Reliance Cup Trial) gives an impression of fast, easy ascents; had the day been wet the camera might have told a different tale! Nos. 1, 2, and 4 depict W. J. Astley (3½ Sunbeam), J. Lee (4½ B.S.A.), and O. Wade (2½ A.J.S.) respectively on Conquering Hero. No. 3 shows H. S. E. Barton (3 A.B.C.) on Alt-y-Bady.

PASSENGER MACHINE TOPICS

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Colated by "Ve'l'ets."

IT is not, perhaps, generally realised that we run grave risks in haphazard buying of lubricating oil. Recently a colleague ruined his bearings by consenting to test a certain oil which enjoys the best of reputations. Now the trouble was caused through not draining the tank and crank case of the oil previously in use. Used separately, both these oils are eminently suitable for the machine in question, but together they quarrelled violently to the detriment of the bearings. Mineral and vegetable oils will not mix, and before refilling with one oil it is very desirable that the other should be cleared out. Another colleague had trouble with his bearings through purchasing "loose oil" of an unknown quality while on the road. It is a long tour that requires more than a tank full of oil plus two quarts; but two-quart tins are usually messy things to have lying about. So Prices Co., Ltd., has introduced a tourist's tin, which, holding half-a-gallon, is fitted with a screw filler and spout. What is more important is the cap, which encloses all parts likely to be greasy. It sells at 4s. 6d.

Prices' "Tourist" oil tin.

AN interesting development of the vacuum flask idea is the Aladdin jar, illustrated on this page. It is sold by Dunhills, Ltd., 359-361, Euston Road,

A vacuum flask for either liquid or solid food.

N.W.1, and should appeal to all sidecarists who desire to be independent of hotels and cafés during their week-end jaunts. The jar has a 4in. mouth, holds a gallon of liquid or solid foods, and keeps the contents hot or cold, as required. The price is £5 5s., and a smaller size, with half the capacity, costs £4 4s. Now, we

may expect to see some of the London-Exeter competitors providing themselves with a full course breakfast in case of an enforced stop on Salisbury Plain.

F. C. NORTH'S performance in the Six Days Trials with his O.K. miniature sidecar may be said to have dissipated any doubts as to the capabilities of the small two-stroke sidecar outfit. Quite recently I was aboard one of these little machines, and was very favourably impressed with its power and speed. According to the official figures upon which the awards were based, North lost sixty-eight marks on "Deviation from schedule," which means time errors, but lost no marks on hill-climbing. One would have thought that it would have been the other way about. No marks were lost on silence or brakes,

F. C. North and his little O.K. sidecar outfit, the capabilities of which he demonstrated so successfully during the Six Days Trials. He made clean ascents of Porlock and Lynton.

but twenty-five were forfeited in his speed test, because he was scheduled to average 32 m.p.h. ! He was also "down" a little on oil consumption, but was decidedly "up" on petrol, his consumption being 87.7 m.p.g. Undoubtedly, the diminutive O.K. is a wonder, and its demonstration on Porlock and Lynton was the talk of the day. It will be observed that the sidecar is not one of the eight-slipper type usually fitted to low-powered machines. It has a side door and ample locker space.

Passenger Machine Topics.—

WITH so many good sidecar performances in the Six Days, one cannot very well instance any outstanding sidecar performance other than that of the little O.K. There was, however, another exception worthy of mention, and it supports a view often advanced by critics of the big trials, i.e., that any experienced motor cyclist, without any special preparation to his machine, could emerge with the same honours as those who had a special machine resplendent with all kinds of gadgets to ensure success. I refer to T. F. Blumfield's demonstration of a privately-owned 6-7 h.p. Ariel outfit, with which he won a gold medal. Blumfield was run into by a car on entering Brooklands, and after obtaining permission to postpone the preliminary examination, he returned to the Midlands, borrowed a friend's Ariel and rode it to Brooklands in time to start and to win a "gold." The most remarkable feature of the episode is that this machine was about to be overhauled. In fact, it started the trial with a broken mudguard. The outfit is illustrated here, and it will be seen that the sidecar is fitted with a new type of windscreen, which is the production of

An Ariel sidecar, although awaiting an overhaul, obtained a gold medal in the Six Days Trials. (Inset) A neat V windscreen which opens with the door.

An A.J.S. sidecar of light construction, specially designed for the 2½ h.p. model.

The new A.J.S. tandem sidecar. (Inset) Disposition of additional seat, backrest, and screen.

Messrs. A. J. Homer and Sons, of Gooch Street, Birmingham. It is quite a neat affair, effectively screening the passenger and opens with the door, thus obviating the nuisance of having to unscrew butterfly nuts.

ALMOST every 2½ h.p. machine on the market is capable of light sidecar work. It is, therefore, not surprising that Messrs. A. J. Stevens have introduced a little passenger attachment to fit to their roadster model of the famous mount that won both Junior and Senior T.T. races this year. The A.J.S. firm, however, as usual, have gone a little further than the maker of the average lightweight sidecar outfits. The sidecar is on touring lines, with a side door and high back; in fact, the outfit is in keeping with the high standing of the 7 h.p. machine. This Wolverhampton firm has also introduced a tandem sidecar for the twin machine. It has

a length of 6ft. 6in., and is fitted with two hinged dashes complete with screens.

WHEN I purchase my next year's sidecar, I shall insist that the specification includes a hood cover of some material that can be easily washed down. A hood gets dusty when carried exposed, and it is not an easy job to clean it; further, when travelling without a passenger and with the screen down, wind gets under the folded hood and turns it into a form of parachute. A combined apron and hood cover, such as fitted on Gloria sidecars, will serve my purpose.

"SAFETY FIRST."

Some Hints and Golden Rules for Motor Cyclists issued by the London Safety First Council.

Two illustrations issued by the London Safety First Council, graphically depicting the dangers motor cyclists run if the rules of the road are not strictly followed.

"At cross roads, slow up and give warning."

"Don't pass traffic on the near side."

THE work of any body which tends to remind drivers of all classes of vehicles of their obligations must be to the good of motor cyclists; and in this connection the activities of the London Safety First Council are now well known to riders in the Metropolis. For some time the Council has been prominently displaying posters which give hints to all classes of road users, including motor cyclists, to whom a variety of appeals are made. The hints contained in them are intended for London riders and drivers in most cases, but most of the rules apply all over the kingdom.

The "Hints to Motor Cyclists" poster No. 1 contains the following six simple hints, obvious to everyone, but so frequently overlooked:

- 1.—When overtaking other traffic, pass on the off side. Passing on the near side may be dangerous.
- 2.—Be on the alert for sideslips on tram rails and greasy roads. A low saddle adjustment is a safe precaution.
- 3.—When turning corners, reduce speed and take correct sweep.
- 4.—Slow up and give warning before entering or crossing main roads.
- 5.—Keep an eye on the vehicle in front.
- 6.—Keep lamps well trimmed, and beware of obstructions at night, such as:

Meandering market waggons.
Vans delivering coal.
Road excavations.
Broken down vehicles.
Careless pedestrians.
Straying cattle.

Further accident prevention hints are given in the "Hints to Motor Cyclists" poster No. 2. These are:

- 1.—Before starting out, go over machine with spanner and oilcan. Smashes have resulted from loose brakes and seized bearings.
- 2.—Learn to change speed without looking at your feet or hands.

3.—Do not carry loads which obstruct your view of the roadway. Overloading causes loss of control.

4.—On no account allow "pillion riding" on solo machines.

5.—Be sure your brakes are in order. It is more important to be able to stop than start your machine. Be prepared to stop.

6.—If possible, have all controls mounted on the handle-bar of your motor cycle.

One of the posters published by the London Safety First Council showing drivers' signals.

Very few of our readers will agree with the preceding hint, No. 4; and, as we do not wish to reopen a heated correspondence on the question of pillion riding, we would remind motor cyclists that the hints have been framed with London traffic in mind. Everything considered, however, we think the majority of our readers will agree that pillion riding on solo machines in London traffic, although quite common practice, is rather risky. After all, the London Safety First Council is in existence to discourage risk-taking in all its forms.

Hand Signals and their Observance.

Some of the hints to taxi drivers apply equally to motor cyclists, and among them may be mentioned the following:

Give hand signals and slow down when approaching from side streets into main thoroughfares. To cut corners limits your observation and that of approaching drivers.

Before turning into the roadway, show hand signal, and give traffic following time to slow down.

Another poster, which we reproduce in miniature, deals with drivers' signals. It is most necessary that the novice thoroughly understands these signals, since the drivers of large hooded vehicles, being unable to look backward, rely upon their observance. Such reliance on the observation of following drivers would not be so necessary if the frequent urgings of *The Motor Cycle* and *The Autocar* had been heeded, and reflector mirrors were fitted to heavy transport vehicles.

Appended are a few additional hints derived from experience and observation:

Ascertain whether full steering lock can be easily obtained when the hood of the sidecar is up. Sometimes stiff gauntlets will foul the screen when the arm is being returned to normal position.

Safety First."

If your hat blows off, do not (1) stand on the brakes, which may cause a skid; or (2) pull up suddenly and turn before ascertaining whether the road is clear. Safety is the first consideration. Never mind the hat for the time being.

If your lamps require attention, (1) pull up under a street lamp; or (2), if in the country, find a convenient spot off the highway.

To mend a puncture, place the machine so that you will be working on the near side of the road. You may become so absorbed in your work that you may not remember the possibility of passing traffic each time you stoop.

Make sure carbide tin lids are secure. Loose carbide lying about in a sidecar may escape notice until a wet ride, when dampness will generate gas, which might be ignited by the passenger lighting a cigarette.

Do not start your engine under the nose of a horse. Think of the likely consequences if it takes fright.

From the "Hints to Motor Cyclists" poster: "When taking corners reduce speed and take the correct sweep."

Keep your eyes open for the unexpected on the part of pedestrians. The pavement rule usually is to keep to the right, which means that pedestrians on the kerb are travelling in the same direction as the traffic, and may step off into the roadway without looking round.

When passing through a roadway in which children are playing, look out for the unexpected. Children at play forget everything else.

Heed all warning signs. Some of them are futile, but others indicate real danger spots.

A golden rule: Travel cautiously on roads you do not know.

Do not take risks in overtaking slower traffic on the open road, especially with an empty sidecar. Remember that a sudden swerve to the left in front of an overtaken vehicle, to avoid one travelling in the opposite direction, may cause the sidecar wheel to lift.

AMERICA NEEDS A T.T.

American and British Motor Cycle Racing Contrasted, with a Plea for the Adoption of a Road Race for Stock Machines in America, similar to the British T.T.

An American dirt racing track apparently located where ground space is no object. The scene depicts a tussle between five Harley-Davidson motor cycles.

AMERICAN dirt track racing is thrilling and exciting; but, beyond annihilating time and gambling with the undertaker, it means nothing, and is not getting us anywhere. U.S.A. racing machines are of very special design—fragile, delicate, short-lived, and altogether impracticable for ordinary road use. They have been over-developed, compressions have been raised, pre-ignition has been conquered, and the general overall efficiency raised until the machines are capable of speeds far in excess of the limits of safety of the tracks, with the exception of the few two-mile dirt speedways and the board tracks. Indeed, the only similarity between the special racing machines and those sold to the public is the nameplate. It is a case of racing one type of machine and selling another, and racing resolves itself into a battle of nameplates, for the general public does not differentiate between the special racing mounts and 'be stocks, principally because we have never seriously featured stock machine competition. The nett result of the present scheme of dirt track racing is to put a premium on recklessness, for the winner is usually the rider who has least use for the magneto cut-out.

Our correspondent, who holds a responsible position with the makers of Henderson and American X motor-cycles, is in close touch with the sporting side of the motor cycle movement in America, and makes a strong plea for genuine road racing events in the U.S.A. His article reveals the great difference between the dirt track racing in America and our own racing at Brooklands, and road contests such as the T.T.

American factories spend a lot of money supporting race meetings. Machines are being speeded up from year to year, while the dirt tracks are deteriorating. Really, we are exploiting hazards and risks, and have already sacrificed many valuable lives in the quest of speed. On August 14th, Albert "Shrimp" Burns met an untimely end in a race meeting on a mile dirt track at Toledo, Ohio.

Burns was the mainstay of the Indian racing team, and just three weeks before he had met on a mile dirt track at Kenosha, Wisconsin, the cream of the Harley-Davidson racing men on eight-valve machines, and, single-handed, he outrode and vanquished them in three events.

The long list of victims in American track racing bears out the statement that

we are paying an awful price for our sport (?), and getting nowhere.

The effect of this latest fatality in American racing will be far-reaching, for Burns was known and liked by all. There is a strong agitation now for a race patterned after the British T.T.—a road race for strictly stock machines which will be a real index of the performance capabilities of the kind of

machines the riders buy, under actual road conditions. Such a contest would also emphasise the skill of the rider, rather than the chances he is willing to take. And it would teach us a lot of things which could be built into our stock machines. It is a fact that our dirt track racing teaches us practically nothing which can be utilised in improving machines for the public. A T.T. race would really "improve the breed," and would attract the attention of the public, because it would be a true sporting event, and it would attract many private owners, who are barred from track racing because of the danger, and because they cannot afford special racing machines, which are altogether unsuitable for anything but these events.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

MYSTERIOUS LACK OF POWER.

Sir,—Referring to the letter headed as above, I take it that the engine is fitted with an automatic inlet valve. The fitting of a very weak spring on it will cause "Constant Reader's" trouble to cease. Hoping to hear the result,

G. J. McCANN.

Sir,—If "Constant Reader," who complains of a lack of power in his De Dion machine, is quite sure that the timing of the machine, etc., is correct, the only possible cause would seem to be lack of a sufficient petrol supply.

Let him examine the fine wire gauze at the bottom of the Amac float chamber by unscrewing the coupling nut between it and the supply pipe from the tank. The gauze is probably choked up with fluff and dust filtered out of the petrol. If this gauze gets clogged, the petrol only filters slowly into the float chamber, and as soon as the machine has run a few yards it pulls up through lack of fuel. By the time the rider has dismounted and had a look round the float chamber has filled again, and the machine will start off again for another few yards.

L.V.A.

Liverpool.

WEIGHTS—CATALOGUE AND RUNNING.

Sir,—Would someone please explain to a novice the glaring discrepancies in the weight of similar machines in your A.C.U. report? In one 2½ h.p. model the highest and lowest vary by 40 lb.; in a 2½ h.p. model, by 31 lb.; in a 3½ h.p. model, by 37 lb.; and in a 3½ h.p. model, by 52 lb.

My new machine will have to be dragged up two awkward steps to get home; hence a lively interest in the dead weight—the real weight. It is clear that a very substantial addition has to be made to the catalogue estimate.

G.L.D.

SUNDAY COMPETITIONS.

Sir,—As one of that vast body of men who come under the heading of "Public Opinion" or "The Man in the Street," will you accept my hearty thanks for your spirited reply upon the above subject? When one has been away from home on business all the week, the return to home and loved ones is valuable indeed. I may be unfortunate in residing upon the main road from York to Harrogate, but I can say that my Sabbath is disturbed by the pleasurable-going fraternity *via* char-à-banc, motor car, motor cycle, etc. Whatever men and women may think about it nowadays, it is still true that "a Sabbath well spent brings a week of content."

F. RAYNER.

NEXT YEAR'S T.T.

Sir,—With regard to the many and varied pros and cons raised on this question, may I, as an ordinary John Citizen, interested, it is true, in the pastime, briefly as possible put forward my opinion of the change.

I am entirely in agreement with Mr. Gelder's remarks on the desirability of changing the course of the T.T., provided that the main objects of the races are not lost to view in so doing, which, as I understand them, are the evolution of a reliable machine, with really efficient control and design, plus, of course, a certain degree of sheer speed, and, of course, stamina, though it is only natural, as an Englishman, to prefer the race to be held in our own borders.

May I ask if it is intended to make the change to Belgium a permanent one, and so displace the Island as a course? This I should strongly deprecate. Generally speaking, I should like to see the race held one year in Belgium, another

in England, another in Scotland, as this would effectually prevent any stereotyping of a machine for a special course.

Surely it is not impossible for the A.C.U., well backed by the motoring and motor cycling public, to get the required permission to hold the race in England and Scotland, especially as it only entails the closing of a very small portion of the public highways for a comparatively short period.

The matter of spending so much money in a foreign country is indisputably worth the vast advertisement it will give to the British motor manufacturers, when foreign trade is to them becoming more and more a *sine qua non* (provided, of course, that they are prepared to manufacture their goods at a price that will not be prohibitive to the foreign market).

The transport formalities, etc., to Belgium, will most probably be found to be less worrying than those to the Island, which is in favour of deciding the change.

Whether the welcome and the absence of irritating restrictions and fabulous prices, etc., will be all that is claimed for them remains to be seen.

It is to be hoped that the loss of profit from the races will induce the thoughtless Manxmen to remove those several causes of friction mentioned here and elsewhere in your columns, and so permit the races to be held there again from time to time in the future.

Staines.

JOHN CITIZEN.

Sir,—I have read with much interest the various points of view from which the motor cyclists of Great Britain regard the proposed venue for next year's T.T. races. I say Great Britain advisedly, as Ireland does not seem to be considered at all, and although many people regard Ireland as a mere nonentity, yet from whatever aspect we view her, she must be reckoned with, and cannot be overlooked. I would like to give you at least one Irishman's unprejudiced views on the 1922 Tourist Trophy races.

Belgium is in many respects an admirable ground for the races, inasmuch as, from what one can hear, the transport facilities, the enthusiasm displayed by both the Belgian authorities and people, and the legal requirements are all that could

SERVICE, A.D. 1921.

A smart and up-to-date messenger boy who, using a Kingsbury commercial scooter, ran errands for Six Days Trials competitors at Taunton.

reasonably be desired, and the roads on the whole are admittedly fine and fairly wide and straight. So much can be said in favour of the Competitions Committee decision.

I will now look at the other side of the question, and speak as one who has personal experience of Belgium. If the T.T. is promoted purely as a speed contest, then there is no better place to hold it than Belgium; but, if it is promoted as a contest combining speed with efficiency and reliability in other directions, as seen from the tourists' point of view, then the new venue is of little or no service. I cannot remember having seen a mountain road in Belgium which could even remotely approach the gruelling ascent of Snaefell—in fact, as we regard mountains, the country has practically none. There are no descents which are severe enough to test braking efficiency thoroughly; and, with the exception of slowing for a corner, brakes would be of very little value. This would mean that in a year or two our braking systems would be matters of secondary consideration. This state of affairs would hardly please the tourist, and yet the race is supposed to be run in his interests.

Again, it has been urged that the race is an international one, and to have such a race in Belgium would stimulate our overseas trade. Now this is a very plausible argument; but the majority of us know how weak a one it is in reality. We often ask our friends in other countries why they do not ride British machines, and almost invariably they tell us that machines of British manufacture are too dear, while American machines are sold at a fairly reasonable price—in fact, the average British solo mount of 3½-4 h.p. is nearly as dear as a high-powered American sidecar. If such is the case, changing the racecourse to Belgium will not assist us in the least, as long as British prices are what they are to-day. The race has always been essentially our own, and should it be turned into a Continental one 50% of this country's active interest in it would die.

It is of no use talking of the distance between London and the Spa v. London and the Isle of Man. London is not, and never was, and never will be the centre of the British motor cycle industry. Wolverhampton, Coventry, and Birmingham are where we must start, and not London. To take London as a centre means that those Scottish cyclists north of the Tweed, not to speak of Irish cyclists, would have a long and expensive journey to Belgium.

And now I come to my suggestion, which, if considered, might assist us out of the mess we have got into. If the Isle of Man authorities are putting obstacles in the way, and if the question of Belgium raises new difficulties with the British motor cyclists, why not make at least an effort to hold it in Ireland, not in the disturbed areas of the South and West, but in Ulster? If it cannot be held in 1922, it may perhaps be held the next year. With wise and careful handling, this may be done. Here we have a new Parliament, new laws in respect of Ulster will be made, and a new era is opening up for the North of Ireland. The steamers from Liverpool, Fleetwood, Heysham, Glasgow, and Ardrossan run every night to Belfast in conjunction with the English and Scottish trains, so there should be plenty of transport facilities. The A.C.U. has the whole raw material in its hands, if it only uses it wisely.

On the 3rd inst. we had a twenty-five miles road race near Belfast over a triangular course. The utmost enthusiasm was shown by both motorists and the ordinary public. As far as the eye could see the grass banks on the roadside were crowded with spectators. I was at one of the corners, and at this point alone there were about three or four hundred people. Not too bad for one of the first displays of its kind in Ireland! The police, assisted by the stewards of the club, kept the roads clear, and everything seemed well organised. We had three riders taking part who were entered for this year's T.T., and I heard one who rode for his trade team in June say that he never saw the roads kept clearer even in the Isle of Man. Surely this should act as a spur to the Northern Cabinet on a matter of such importance to our A.C.U. to send a deputation to meet the members of the British motor cycling public.

SPORTSMAN.

Belfast.

WHICH IS THE FASTEST NORTON MODEL?

Sir.—As an intending purchaser of a Model 16H Norton, the following information would be of interest, provided, of course, it is not prying into manufacturers' secrets too much.

In all speed contests, races, etc.—to mention only two outstanding events: Mr. Horsman's remarkable ride when he finished first in his class and fourth irrespective of class in the five hundred mile race at Brooklands, and Mr. Hassell's well-deserved win in the Belgian Grand Prix—the machine used is a standard Model 16H.

Perhaps I am rather "splitting hairs," but what I should like to know is what type of engine is used: the B.S., B.R.S., or the ordinary 16H catalogued at £132 and expertly tuned for the event, and which appears to be the same thing, judging by a recent advertisement in *The Motor Cycle*, wherein a well-known rider and agent in the North offers to tune up a T.T. three-speed model to 75 m.p.h.—the speed guaranteed by the B.S. alone.

This seems strange to my lay mind, and I wonder why pay the extra for the B.S.

THE
MOTOR CYCLE
IN CARNIVAL
DRESS.

A B.S.A. enthusiast's highly decorated sidecar, which took part in the Campaha Floral Pageant at Colombo, Ceylon. The letters B.S.A. were picked out in flowers and fastened on the front of the machine.

(Right) A clever decoration of a sidecar by Mr. H. Scott, of Winchmore Hill, N., used at a charity fête in aid of the London Hospital. Query: What make is the sidecar?

PLAYING WITH FIRE?

Sir,—In his letter to *The Motor Cycle* of September 8th, Mr. C. E. Baines says that he hopes to get a spark gap across each burner of his acetylene lamps. I presume his intention is to light up without stopping by means of a switch and water control worked from the saddle. Surely when the water is turned on with the lamp glass closed there is considerable danger of an explosive mixture being formed in the lamp? The result when the spark gap is brought into action may be amusing to all except the owner.

A. S. LYNNE WILLIAMS.

COLLECTING FRICTIONAL ELECTRICITY!

Sir,—I believe that I voice the opinion of a large number of the motor cycling fraternity when I say that it is about time that we had a definite opinion from some "No. 8 hat" in the electrical world as to the validity of the claims of the makers of spark intensifiers, which consist of extra spark gaps to be connected in series with the plug points.

The makers of these devices naturally make great claims for them, but the retailers of one of these devices actually stated (amongst other things) that the device collected the "frictional electricity" (inverted commas are mine) generated by the engine, and supplied it to the plug, thus augmenting the sparking current from the magneto.

I ask you, all ye legions of motor cyclists, why not scrap your magneto and fit a spark intensifier?

I have had quite extensive experience in various kinds of electrical work, and am not at sea on the theory; but I must confess that all the theory and practice of electricity which has come my way fails to account for any benefit to be obtained by fitting an extra spark gap.

Perhaps some expert will pass an opinion.

L. W. E. HARTLEY.

COMMENT OR CRITICISM?

Sir,—I have much debated the advisability of daring to reply to "Ixion," knowing full well his skill and also much respecting his writings, which I have happily followed for very many years.

It is, I seriously suggest, a fact that the A.C.U. has not criticised design, although when a large number of machines go wrong on one particular point the markings are deducted for failure of that part. It is the markings that have not been deducted for design, but in commenting upon loss of marks for a particular cause it is impossible to avoid indicating that the design would appear to be *responsible*!

I have in mind the case of front wheel brakes, which, I think everyone will admit, have been improved by the trials of the A.C.U.

"Ixion" says that the judges came near to advising the trade to scrap air-cooling. The only comment on this matter that I can trace is a remark by the judges that many air-cooled engines, after long climbs on low gear, as regards smell, noise, heat, and liability to knock, are not impressive. Anyone who saw performances in 1919 on such hills as Bwlch-y-groes would agree that this remark was justified.

There is no need for air-cooled engines in the ordinary way to suffer from overheating.

A. M. LOW, D.Sc., A.G.C.I.

"NEVER SAID IT."

Sir,—Under the above heading, "Ixion," in a very condescending style, pats the small two-strokes on the head, saying that he always tries to keep one for pottering about, but that it would have no value for him unless he had a larger cycle for general use. I have had extensive motor experience for the past eighteen years. Two months ago I bought a 2½ h.p. New Hudson. Recently I took a trip of 650 miles round the Midlands on it, and never experienced the lack of speed that "Ixion" refers to. Forty miles per hour is quite quick enough, and a faster pace only gathers up enemies for motor cyclists generally. These little motors take all ordinary hills on top gear, and as for rough roads I have yet to find a motor car or cycle which does not jolt one in passing over them.

The light machines give little trouble as regards punctures, and I never experienced one on the little tour I have referred to, whereas on a heavier machine I should probably have had two or three, especially on the worst roads.

Although I am not possessed of money to throw away, still, impecuniosity did not force me to the purchase of a lightweight, but commonsense will make me retain it.

R. Y. THOMAS.

"SKILFUL DRIVING" THAT SHOULD HAVE BEEN UNNECESSARY.

Sir,—A letter headed "Skilful Driving by an Unknown Rider," and signed "Novice," appeared in your issue of September 1st.

According to the writer, he was giving his wife instructions how to drive a sidecar on, of all places, the Snake Hill, above Glossop. During the lesson, with the turnout apparently across the road, a solo rider flashes round a turn, and finds himself with a second or two in which to decide whether to collide with the sidecar or take off the road up a grass bank strewn with boulders. This latter course he elects to follow, thereby avoiding the sidecar turnout and owner, and, according to "Novice," by marvellous judgment and magnificent driving, he negotiates the boulders safely, and vanishes out of sight as rapidly as he appeared.

"Novice" concludes by paying a tribute to the unknown rider, whose iron nerve, if emulated by other riders, would go far to rendering the roads generally safer for amateurs; beginners, etc. The moral from this episode is very clear. "Novice" should have known better than to choose a stiff hill on a main road as a suitable place to teach a lady how to drive a sidecar.

If the "unknown rider" had failed to negotiate the grass bank and boulders and had crashed he would have received a reminder as to the recklessness of coming down a steep hill at high speed, and rounding a turn without being able to know whether the road beyond was obstructed.

It is motorists like "Novice" and "unknown rider" that I hope to keep clear of.

R. G. LINDSAY.

SUMMARY OF CORRESPONDENCE.

Mr. S. J. Caswell warns motor cyclists, who are in the habit of going through the ford in Kenilworth, that there are at present a number of large boulders, bricks, and broken bottles in the bed of the stream.

Mr. R. G. Knight considers that a word of thanks is due to Mr. Durant, who gave demonstrations of the L.A.D. cycle car on Crooksbury Hill during the recent Six Days Trials. Mr. Durant was the means of preventing several competitors from completely losing their way.

Recently, when driving his 6-7 h.p. Ariel sidecar near Hartford Bridge Flat, Mr. James Burr fainted, and was found unconscious by passers-by. He writes to thank those who helped him, particularly an A.A. patrol, although Mr. Burr is not a member of that organisation.

The riders of a sidecar, XD 902, are thanked by Mr. G. T. Davies for their help on a recent Sunday morning on the Sevenoaks-Farnborough road.

A Swedish correspondent complains that he very often receives replies from advertisers in *The Motor Cycle* that are insufficiently stamped.

Referring to "Ixion's" recent "Comment," headed "My Coat," the Sumtache Co., 2, Cross Street, St. Albans, call attention to their special preparation for "dry-cleaning" all kinds of clothing.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

Club News

Essex County and Southend A.C.

Commencing at 2.30 p.m., a gymkhana will be held next Saturday in the meadow opposite Solbys, Hadleigh.

Barnsley and District M.C.C.

As a result of the recent well-supported and successful gymkhana, the St. Dunstan's Home benefited to the extent of £32 10s.

South-eastern Centre A.C.U.

Next Saturday the Brighton and Hove M.C.C., on behalf of the Centre, will hold a hill-climb on the by-road from the main Dyke Road to Saddlescombe, about three miles from Brighton. The start is at 2 p.m.

Essex M.C.

An extraordinarily small percentage of "golds" went to the motor cyclist competitors in the recent London-Bala-Dunstable run, described in *The Motor Cycle* last week. Results:

GOLD MEDALS.—W. L. Handley (2½ O.K. Junior), N. Hall (2¼ O.K. Junior), and W. C. Henry (7 A.J.S. sc.).

SILVER MEDALS.—W. G. Crabb (4 Triumph), A. C. Rhodes (4 Triumph), J. G. L. Boorer (5 N.U.T.), S. M. Greening (2¼ Crus-Jap), Neel C. Dear (3¼ Sunbeam), E. A. Bridgman (7 Indian sc.), and P. L. Wright (6-9 Carden).

BRONZE MEDALS.—H. W. Harrington (2¼ Douglas), J. McBirnie (7 Indian), G. A. Lovegrove (2¼ Rado), G. E. Cuffe (2¼ Metro-Tyler), W. Simpson (7 Indian sc.), J. Wallis (6 Bradbury sc.), W. H. Glendinning (8 Rex sc.), A. W. Daniel (8 Matchless sc.), and G. C. Formilli (6-9 Carden).

Kilmore Sports Club (Motor Section).

At a hill-climb, open to solo machines of any capacity, held under the auspices of the Kilmore Sports Committee, the Hobson Cup was carried off by R. Hughes (3½ Rudge). The fastest times were: R. Hughes (3½ Rudge) and W. Weir (4 Triumph), 18s., tied; M. Walker (4 Triumph), 18½s.; W. J. Hughes (3½ Rudge), 18½s. The tie was decided by another race, in which the winner put up the same time as in the previous case.

Falmouth and District M.C. and L.C.C.

Fastest time of the day at the hill-climb at Waterhill, Bissoe Valley, was made by A. Richards on a 4 h.p. Triumph, his time, over the course of approximately half a mile, being 33½s. Full results follow:

NOT EXCEEDING 300 c.c.—1, W. L. Thomas (2¼ New Imperial-Jap), 35½s.; equal 2, W. Pascoe (2¼ Bown-Villiers) and W. Williams (2¼ Omega), 62s.

NOT EXCEEDING 500 c.c.—1, R. Johns (3½ P. and M.), 42s.; 2, G. Enson (3½ Triumph), 45½s.; 3, E. Buckingham (3½ Triumph), 45½s.

NOT EXCEEDING 600 c.c.—1, A. Richards (4 Triumph), 35s.; 2, P. A. Bishop (4 Triumph), 36½s.; 3, H. W. Jane (4 Triumph), 38s.

UNLIMITED SOLO.—1, A. Richards (4 Triumph), 33½s.; 2, W. L. Thomas (2¼ New Imperial-Jap), 36s.; equal 3, H. W. Jane (4 Triumph) and P. A. Bishop (4 Triumph), 38½s.

UNLIMITED SIDECARS.—1, J. Fry (8 Enfield), 39½s.; 2, H. Richards (6 James), 47½s.; 3, E. Toms (6 Enfield), 55s.

SIDECARS NOT EXCEEDING 650 c.c.—1, P. Pryor (3½ Scott), 61s.; 2, H. Fernau (4 James), 65½s.; 3, W. O. Pearce (3½ Scott), 71½s.

Week-end Club Events.

Sept. 22.—Doncaster and District M.C.C. Quarterly Rally.

Sept. 22.—Taunton and District M.C. and L.C.C. Traders' Cup Trial.

Sept. 22.—Woodwich, Plumstead and District M.C. Run to Knockholt.

Sept. 22.—Western M.C.C. (Glasgow). Open Hill-climb.

Sept. 22.—Berwick and District M.C.C. Gymkhana.

Sept. 22.—York and District M.C.C. Novices' Trial.

Sept. 22.—Tunworth M.C. and L.C.C. Gymkhana.

Sept. 22.—North Wales M.C.C. Fault-finding Competition.

North-western Centre A.C.U.

The first event of its kind in Blackpool, a very successful motor cycle gymkhana, was held recently by the local club on behalf of the Centre.

Ilkley M.C. and L.C.C.

With a route of about 140 miles divided into four circuits, the trial organised by the above club on September 11th, for the trophy presented by Capt. S. S. English, proved to be a complete success. At the beginning of each circuit, each competitor was given a card bearing the name of a destination, and telling him that he had to reach it by passing through one place and returning by another. There were some trying hills introduced, especially along the moorland trip through East Morton, which threw most of the competitors late at the checks; but W. Moore (on a 3½ Scott) lost only three marks throughout the trip, thus capturing the trophy. W. Scott (3½ Scott) came in second with a loss of 16½ marks, and A. Sutcliffe (4½ B.S.A.) was third with a loss of 30½ marks.

Western M.C.C. (Glasgow).

There were thirty-two starters for the closed team trial at Strathblane on the 10th inst. With only two checks, well arrowed and marked off at intervals of a mile, the course was just sufficiently difficult to find a winning team and provide an enjoyable, as well as sporting, afternoon for the competitors.

M. Fraser (7 A.J.S. sc.) burst his side-car tyre when sixteen miles from the start, and rode the remaining fifty-one miles on the wheel rim, finishing with less than one minute time error and not a loose spoke in his wheel. Results:

FIRST TEAM.—J. Johnston (6 A.J.S. sc.), time error 2m. 10½s.; A. R. Robertson (6 Enfield sc.), 34s.; J. M. Cowan (3½ Reven), 5s. Total error, 2m. 49½s.

SECOND TEAM.—R. Brown (7 A.J.S. sc.), time error 1m. 27s.; A. C. Harrington (2¼ Levis), 14½s.; P. S. Wright (3½ Rudge), 3m. 2½s. Total error, 4m. 43½s.

SPECIAL PRIZE FOR COMPETITOR OUTSIDE WINNING TEAM.—F. H. Manning (6 A.J.S. sc.), time error 3½s.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

SELLING A STOLEN MACHINE.

? Please let me know if I am compelled by law to return the sum paid to me for a sidecar outfit which was stolen before being sold to me. The thief has since been caught and convicted, but I cannot claim from him, as he is in prison.—F.H.

If the machine was stolen before it was sold to you, you would not be able to pass a good title to it, and would have to return the sum received from a sub-purchaser. There is an implied condition on the part of the seller that he has a right to sell the goods.

INCREASING SPARKING RANGE.

? In my ignition control the breaker box rotates about 20° for advancing or retarding. If I filed a longer slot giving a revolution of, say, 25° or 30°, should I be able to advance or retard further, or is the aperture made to advance the spark as far as practicable? In other words, is the aperture in a fixed relative position with the poles of the magnet?—G.H.D.

You would do no harm to the magneto by filing out the aperture in the contact breaker casing in order to get a wider degree of advance and retard. The makers design the magneto so that the spark occurs in relation to the most effective position of the armature.

FITTING A LARGER CYLINDER.

? Would it be possible to increase the power of a 3½ h.p. motor cycle engine by increasing the size of the cylinder, combustion chamber, and the size of the piston? My reason for asking this is that I have a motor of above-mentioned power, the cylinder of which is cracked, and before going to the cost of having it welded, or ordering a new one of similar size, I thought I would like your opinion.—J.M.H.

The only way in which you can increase the power of the machine is by obtaining a cylinder of a greater bore and a corresponding piston to fit. If, however, the new piston is heavier than the old one it will be necessary to rebalance the engine. It is quite likely that the expense involved in the alteration will be greater than the corresponding increase in engine power would warrant, and we think it would be the better plan to obtain another cylinder the same size as the old one.

REWINDING A DYNAMO.

? I have a Westinghouse dynamo giving three amps. at 115 volts. I wish to rewind it to give five amps. at 68 volts, or ten amps. at 34 volts. Will you please say what gauge and quantity of wire will be required, or how to make the alteration if rewiring is not necessary? It is a shunt wound, two pole circular body.—C.W.

It would be much better to sell the dynamo and get one of suitable size for the altered requirements, as you would scarcely be able to do the rewinding of the armature yourself. It would have to be almost entirely rebuilt.

LOOSE CYLINDER STUDS.

? The cylinder of my two-stroke engine moves from side to side on the top of the crank case, owing to the pins coming out of the case. Do you think they could be properly fixed again?—B.E.N.

The only way to secure the cylinder would be to have the holes in the crank case tapped out in order to take studs of slightly larger diameter. Any good mechanic should put matters right fairly easily.

LAPPING-IN PISTON RINGS.

? A 1920 2½ h.p. two-stroke which suffered lately from lack of compression would permit me to stand on the kick-starter indefinitely when it was new, so I decarbonised it, at the same time fitting new piston rings. The rings were not from the works, but were of a well-known make, and I fitted them as they were sent out (except for filing the slots), and was told afterwards that they should have been faced up. For the first seventy miles the machine went very well in spite of bad compression. I then took it down again, and found that the gas had been blowing past the rings in places, so I refitted the original rings. However, compression, is no better, therefore, I conclude that the cylinder is scored or scratched. Do you think the rings will "run in" in time, or would it be better to lap the rings into the cylinder with emery? Will you kindly explain in detail this process?—H.A.B.

If the rings were of the correct outside size they should be "run in" after about 100 to 150 miles. If you wish to lap-in the rings, however, remove the connecting rod and piston from the crankshaft and fit a piece of wood in the big end of the rod as a temporary handle. Secure the cylinder on the bench or in a vice. Now coat the piston and rings with a thin film of the finest grinding paste mixed with oil, and work the piston up and down in the cylinder, taking care to give it a partial rotation every few strokes. Make quite sure that the piston cannot go too far into the cylinder head, so allowing the rings to expand into the combustion space and thus locking the piston in the cylinder. A block of wood in the head will prevent this happening. Altogether, we think it would be better for you to run the new rings in on the road rather than to attempt lapping them in.

Important Dates.

Sat., Sept. 24th—M.C.C. Sportin' Trial.
Mon., Sept. 26th—
Anglo-Dutch Reliability Trial.
Sat., Oct. 1st—Doncaster and District
M.C.C. Open Speed Trials.
Wed., Oct. 6th, to Sun., Oct. 16th—
Pa is Show.
Sat., Oct. 8th—B.M.C.R.C. Championship Meeting, Brooklands.
Sat., Oct. 8th—The "Scott" Trial in Yorkshire.
Fri., Nov. 4th, to Sat., Nov. 12th—
Automobile Exhibition, Olympia and White City.
Mon., Nov. 28th, to Sat., Dec. 3rd—
The Olympia Motor Cycle Show
Sat., Dec. 3rd to Tues., Dec. 13th—
Brussels Show.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—
Scottish Car and Motor Cycle Show.

TRANSMISSION AND LUBRICATION QUERIES.

? (1.) Would it be possible to run my 1911 2½ h.p. A.J.S. machine with single chain from the engine to the back wheel?
(2.) Would oiling be satisfactory on a four-stroke with a plain sight drip feed without pump, and would a non-return valve be necessary?—E.P.

(1.) It would not be satisfactory to run the machine with a single chain from engine to back wheel, as there would be considerable whip in such a long drive. (2.) A non-return valve would be needed between the crank case and the sight feed drip, and a release valve would be needed in the crank case if one is not already fitted. It would probably be better to have a hand-operated oil pump.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"C.A.S." (West Hampstead).—A.B.C. sidecar outfit: Speed, reliability; petrol and oil consumption, and power; also petrol and oil consumption of the 7 h.p. A.J.S. sidecar outfit.

"W.H.C." (Leigh).—5 h.p. Stanger two-stroke for sidecar work: Consumption, comfort, reliability, and top gear climbing.

"F.W.W." (Sutton Coldfield).—Ner-a-Car: General experiences.

"E.B." (Easingwold).—Ner-a-Car: Efficiency and practical value.

"J.L.H." (Worthing).—3½ h.p. Rudge-Multi: Reliability, comfort, climbing speed, and flexibility.

"A.C.M." (West Bromwich).—3 h.p. Royal Enfield, 1916-19: Speed, climbing, and reliability.

"W.A." (Findochty).—5-6 h.p. Raleigh, solo: Reliability, ease of handling, saddle position, speed, and comfort.

"A.C." (Chelmsford).—Road conditions, etc., in Gambia. Suitability of 4 h.p. Triumph there.

"B.G." (Dublin).—3½ h.p. N.U.T., 1920: Consumption, speed capabilities, general reliability, and steering.

"J.A.C." (Oxford).—Scott for sidecar work (combined weight of passengers 20 stones): Petrol and oil consumption; is it necessary to keep in tune?

Miss H. B. T. (Pembroke).—Unibus: Comparisons with scooters, climbing (long, steep hills), and overheating.

"F.S." (Wick).—3½ h.p. T.T. Rudge Multi: Device to stop valve chatter, general reliability, gear inefficiency, W.S.R. variable jet, and lubrication.

READERS' REPLIES.

A KNOCK AT SPEED.

Under the above heading "A.R.H.B." seeks advice in your issue of September 1st. My two-stroke machine behaves in exactly the same manner. Moreover, it is in perfect condition and no signs of wear at all. I have conducted several experiments and am fairly confident as to the cause of the trouble. Like "A.R.H.B.," I found excess of oil temporarily cured the knock. This, however, is purely due to the cooling effect of the oil. In my case, it is not plug pre-ignition; and the engine will stand a long climb at a speed just under that required to produce a knock without a sign of pre-ignition. Again, the sound is quite different in tone from the metallic "pinking" of pre-ignition. It is a dull rattle, and, presumably, is the same as what is sometimes called "two-stroke rattle." I have proved that variation in the richness of the mixture has no marked effect, and if the engine is given sufficient oil to make it four-stroke no knock appears at speed. This is due to the cooling effect of extra oil and reduced number of explosions. Now the trouble in my engine (and "A.R.H.B.'s" case seems the same) is this: When the speed is increased, although the cylinder does not become much hotter (owing to amount of cool air increasing), the small and light piston, not being proportionately cooled, gradually gets very hot and swells

up in the cylinder, the greater heat breaking down the reduced film of oil. The rattle is then produced by the up and down friction of piston and cylinder, both being comparatively dry. This condition is, I believe, what is termed "drying up," and is next door to "seizing." If the machine is slowed down, although the "rattle" disappears, there is still a slight noise, but this is made inaudible by the exhaust and the wind passing the ears. The cause of this effect might be owing to the piston, or cylinder, having become slightly distorted, and possibly conditions will improve with wear. If at any time "A.R.H.B." should true up or fit a new piston or cylinder the results would be interesting if published. Is it because of this possibility of "drying up" that aluminium pistons are favoured for racing two-strokes?—GUDGEON, PIN.

Apropos of "A.R.H.B.'s" letter in your issue of September 1st, my own Triumph Junior developed an alarming metallic knock in precisely similar conditions. This I traced to the presence of a layer of carbon under the lowest piston ring, which had not been moved previously. It was somewhat deceptive, as the ring looked all right, and was quite free in its groove. The difference is astonishing, the machine covering about 200 miles in one day whilst riding from Cornwall to Portsmouth.—H.H.C.A.

I should like to state that I also own a Junior Triumph, which a few weeks ago developed a knock, with precisely the same characteristics as stated by "A.R.H.B." It began as soon as the engine became warm, and got worse and worse if speed were increased, but was not audible at slow speed or in second gear. On being taken down, I found there was a slight end play in the main shaft. I have since had it put right, and there is not the faintest trace of the noise. It occurred to me that this might be the cause of "A.R.H.B.'s" trouble.—G.H.B.

Sidecar Windscreens.

Coupé windscreens, described in *The Motor Cycle* of August 4th, are now being manufactured by Coupé Windscreens, 28, Middle Street, Portsmouth.

Magnetos in the Six Days Trials.

Twenty-three gold medals, four silver medals, and one bronze medal were awarded to riders whose machines were equipped with the British-made M-L magnetos.

In South Africa.

The gold medal awarded in the Durban T.T. race for the most meritorious performance in the event was gained by A. R. Morcom (2½ Cedros); 142½ miles were covered, and the machine finished in perfect condition.

Found on the Road.

On Saturday, September 10th, a P. and M. rider dropped an article from his toolkit in Charlton Road, Blackheath, and it was recovered by Mr. F. J. Tilbury of 63, St. John's Road, Blackheath, S.E.3.

Mr. C. S. Bailey, of New House, Egerton Street, Stockton Heath, Warrington, reports finding articles of motor cycle equipment between Lichfield and Stafford on August 16th and 23rd.

A Scott rider who dropped a pump near Bodfari on September 7th may obtain it from Mr. R. F. Ellis, Penne Park, Raabon, North Wales.

Between Dunster and Minehead on August 31st, Mr. C. W. F. Simpson, of 15 and 16, Elgin Street, Hereford, found a motor cycle toolkit, which the owner may have on forwarding a description.

CONTRASTS IN TRAVEL.

A scene in Durban where the rickshaw and the "boy" in war paint are a common sight, and where the lightweight British motor cycle is rapidly gaining popularity. The Douglas rider is F. A. R. Zurcher, winner of many long distance road races in South Africa.

A NEW RALEIGH SINGLE.

A 350 c.c. Machine with Outside Flywheel Engine to be sold at a Competitive Price.

Many of the features of the 5-6 h.p. model have been retained in the new 2½ h.p. (350 c.c.) Raleigh, e.g., the outside flywheel, the distinctive tank, and the sensible, tool-bag position.

IN its post-war re-entry into the motor cycle field, the Raleigh Cycle Co., Ltd., of Nottingham, in offering the now well-known flat twin spring frame machine, made a special appeal to those who prefer the luxury type of mount.

The large resources of this concern are now being directed to that market which demands the utility machine, and at this year's Olympia Show will be staged several examples of new single-cylinder Raleighs of 2½ h.p. and 3 h.p.

Superb quality, sound design, excellent finish, and a truly competitive price will be features of the new machine, and after an inspection of the preliminary model we can state that these features are no mere talking points.

A Workmanlike Power Unit.

A particularly compact and sturdy appearance characterises the engine, which has an exceedingly neat and clean exterior, an ideal not always attained when an outside flywheel is used; no doubt this admirable quality is the result of mounting the flywheel close up to the crank case and taking the drive from the outside, in which location it is much easier to employ chain cases.

Plain bearings are used throughout the engine, there being nothing experimental or untried in the construction. The cylinder is an extremely heavy casting, having very large fins in the neighbourhood of the exhaust port; the exhaust valve cap also is formed with radiating fins. Standard lines are also followed in the timing gear, which has external cams and adjustable tappets operated by rockers. The exhaust valve lifter is of the external type, and is carried on a plate which locks the tappet guides.

Transmission.

Standard models will be equipped with the Sturmey-Archer two-speed gear with clutch and kick-starter and chain and belt drive. The primary chain is of ½ in. pitch × ¼ in. width, and is enclosed, as before-

wide. As an extra, a new type of Sturmey three-speed gear box may be had

Rear brake details, illustrating the very simple method of adjusting the pad.

in lieu of the two-speeder. One point making for neatness is the mounting of the gear lever bracket on an extension

Although the Raleigh lightweight is quite at the other end of the scale from the luxurious 5-6 h.p. twin which has hitherto represented the name in the motor cycle world, it bears obvious evidence of refinements not always common on this type of machine. The pleasing near-side view.

of the off side engine plate instead of clipping it to the saddle tube, as is usually done.

The specification of the rest of the machine may be dealt with briefly. The wheels, which carry 25 × 2¼ in. tyres, run on large hubs, which are built up from tubing and pressed flanges. The mudguards are wide, and have ample clearance, so that oversize tyres may be fitted if desired. Brampton Biflex forks, made under licence by the Raleigh Co., are used; and the frame, which is of extremely stout construction, has round tubes throughout, and gives a low saddle position, owing to the fact that the top tube slopes directly towards the saddle, and has a downward curve as it approaches the saddle lug.

Cleanliness of Outline.

The detail work throughout the machine is excellent, and the design is very symmetrical. Cleanliness of outline is obtained by concealing the control wires in the handle-bars, into and out of which they pass through special brazed-on lugs, mentioned. The final drive belt is ¾ in.

A New Raleigh Single.—

and also by fitting a large tool case on the saddle tube instead of using the more conventional pannier bags on the carrier.

One detail worthy of note is the slight downward slope of the magneto platform. This is not accidental, as might be supposed, but is done in order to allow any of the popular combined ignition and lighting units, such as the Maglita, to be fitted.

In addition to the standard model equipped with upturned handle-bars and aluminium footplates, there will be offered also a sports model with semi-T.T. bars and footrests. Both models come within the 200 lb. tax-

Chain cover (showing inspection door), footrests, and conveniently placed brake lever on the new lightweight.

tion limit. Features common to both are the 1½ gallon petrol tank, finished in the usual Raleigh colours (black with red and gold lining), and the heel-operated brake working in the V of the belt drum. A handle-bar-operated rim brake is used on the front wheel, but this will be substituted eventually for one of the dummy belt rim type.

Although mainly intended as a serviceable solo machine, the 71×88 mm. engine (350 c.c.) would no doubt pull a double load with ease, and it is more than probable that a further model, having a larger bore and capacity of about 400 c.c., will be staged at Olympia with a light sidecar.

THE FIRST OF THE 1922 SERIES OF MINIATURE CARS.

This illustration from *The Autocar* is the first to be published of the new 7 h.p. Wolseley. Included in to-morrow's issue of the journal named is a fully illustrated description of this interesting development. The engine is a water-cooled flat twin of less than 1,000 c.c., with three-speed gear and shaft drive, and the complete car weighs under 10 cwt. Our parent journal, *The Autocar*, announces that it will describe a number of similar miniature cars before the forthcoming Olympia Show, their advent promising to be one of the features of the 1922 programme of the automobile industry. So far their prices are considerably in excess of the high-powered sidecar outfit.

HALF-A-CROWN A GALLON: WHAT IT MEANS.

HALF-A-CROWN does not buy much pleasure now-a-days. An hour on the river—but not on all rivers; an indifferent seat at a good theatre; a good seat at an indifferent theatre; one second quality golf ball; two ounces of tobacco; fifty “gasps”—any of these items leave little change from 2s. 6d. But to the motor cyclist, this small sum now represents fuel for a hundred miles on the road, or to the sidecarist for a seventy-mile trip.

When petrol was 4s. 3½d. per gallon thousands of motor cyclists still considered the joys of the open road cheap at the price; now that No. 1 quality spirit is only 2s. 5½d., the motor cycle must certainly be the finest value-for-money investment of all.

Not only is petrol much cheaper than it was twelve months ago; most brands of lubricating oil have recently been substantially reduced in price, and if the reduction is not immediately appreciated by the average owner, full realisation will come to him when he totals his season's motoring accounts.

A sixpence rise in the price of fuel, naturally, causes much grumbling; but an equivalent fall passes almost unnoticed. Those who are already owners,

whether of big sidecar outfits that just reach the hundredth milestone on a two-gallon tin or of 2¼ h.p. lightweights that go considerably further on a gallon, will, sooner or later, themselves appreciate the present downward tendency of the cost of motoring.

Perhaps this can best be done by comparison. In September of last year the running expenses of a 400-mile holiday tour on a good 3½-4 h.p. single would have panned out as follows:

	£	s.	d.
Petrol—4 gallons at 4s. 5½d.	17	10	
Oil—1½ quarts at 3s. 6d.	5	3	
Total	£1	3	1

To-day the same run on the same machine would only cost:

	s.	d.
Petrol—4 gallons at 2s. 5½d.	9	10
Oil—1½ quarts at 3s.	4	6
Total	14	4

At 23s. 1d. it would not be excessive; at 14s. 4d. it is remarkably cheap.

Times to Tight Lamps.

Sept. 22nd	7.59 p.m.
" 24th	7.54 "
" 26th	7.50 "
" 28th	7.46 "

Safety First!

One of our staff, who is not noted for his punctuality nor his early-rising abilities, has read with considerable satisfaction the London Safety First Council's admonition to "go over machine with spanner and oilcan before starting out." (He rides to the office daily.)

Well-supported Works Trial.

Entries are coming in very satisfactorily for the big Coventry inter-works team trial to be held next Saturday afternoon, and it is anticipated that about one hundred competitors will start. The event is being organised by the Standard and Triumph Motor Cycle Clubs.

Appropriate.

When Mr. S. H. Baker, of Jennings and Co., motor agents in Glasgow, got married last week, the staff sent the following appropriate telegram of congratulations:

"May your life be full of *Sunbeams* and everything *O.K.*, with *Bradburys* unlimited to attain the *Acme* of happiness in *Triumph* through the *Kelvins* and *Humbers* of life.—*Excelsior*."

An Echo of the T.T.

Recently those responsible for the production of New Imperial motor cycles were entertained at Holt Fleet, when Mr. Norman Downes, the managing director, presented Mr. Douglas Prentice—as winner of the 250 c.c. class in the Junior T.T. race—with *The Motor Cycle* Cup (an exact replica of which he has had made for the New Imperial works). A silver cigarette case was also added as a personal gift from Mr. Downes. A similar cigarette case was also presented to Mr. Bert Kershaw in appreciation of his great ride at Brooklands on July 2nd, when he accomplished 500 miles at an average of 50 m.p.h., and also made the fastest lap in the 250 c.c. class, in addition to breaking fourteen records. Silver cigarette cases were also presented to Mr. Leonard Horton and Mr. Fred Bolton, both T.T. riders.

Mr. Downes, in speaking, mentioned that since January 1st of this year New Imperials had gained 102 gold medals and firsts in speed events, and sixty-seven other awards, besides being the winners of the Class A team prize in the A.C.U. Six Days Trials.

Miniature Cars.

In this issue will be found an illustration of the 7 h.p. Wolseley miniature car. It is nearly ten years ago since *The Motor Cycle* gave to the public first descriptions of most of the little cars which have since made history. Among these were the Stellite-Wolseley, Singer, and Morris-Oxford.

Closing Speed Event of 1921.

On Saturday, October 1st, the Doncaster and District M.C.C. will hold the last open speed event of the year. Valuable prizes are offered, including *The Motor Cycle* Challenge Trophy and several special cups; and a big entry is expected. Only flying start classes will be run, thus limiting the trials to a reasonable size. Further particulars and entry forms may be obtained from Mr. L. Callender, 247, St. Sepulchre Gate, Doncaster.

Special Features.

TWO-STROKE SILENCERS.
PASSENGER MACHINE TOPICS.
SAFETY FIRST!

Price Reductions.

The latest price reduction of importance is that of the Norton range, announced this week. The $3\frac{1}{2}$ h.p. single-gear model is now £80, and three-speed £115; while the "Big Four" is £120.

"The Motor Cycle" Photographs.

The great majority of photographs reproduced in *The Motor Cycle* are the work of our own staff of photographers, and those readers desiring to obtain copies may do so at the following charges: Half-plate 2s., whole-plate 2s. 6d., 10x12in. enlargement 5s., unmounted. Mounted prints are 5s., 3s. 9d., and 7s. 6d. respectively.

UP LITTON SLACK ON A 24 H.P. SIDECAR.

Geo. Denley demonstrating, as a result of a challenge, his little Velocette's hill-climbing capacity. He succeeded in climbing this notorious Derbyshire hill with his passenger standing up in the sidecar, proving that no weight was put on the rear wheel.

A Sunbeam sidecar driver successfully "ringing" one of the posts in the "Houp-la" competition at the North London M.C.C.'s Rally at Hendon last Saturday

Some Prices Going Up!

The price of the 1921 6 h.p. Martinsyde has been increased to £155. The 1922 3½ h.p. model will be sold at £120.

A Two-stroke Cycle Car.

An addition to the Metro-Tyler range of motor cycles for 1922 will be a miniature four-wheeler, employing two of the M.T. 2½ h.p. two-stroke engines coupled together. The transmission is by chain and belt through a three-speed gear box. The price is to be £145 all on.

Cycle Car Grand Prix.

Last Saturday the French Cycle Car Grand Prix at Le Mans was won with ease by Lombard on a Salmson four-wheeler, a car of French origin. E. B. Ware, the well-known Brooklands driver, piloted his racing Morgan, but experienced a lot of trouble, which was un-

fortunate, as he was much fancied to win. The race was run over 18 circuits of a 10½-mile course, the first four to finish and times being:

1. Lombard (Salmson)	3	32	9½
2. Violet (Mourre)	3	50	55½
3. Chahreiron (E.H.P.)	3	51	28½
4. Sabipa (Weler)	3	52	3½

Championship Meeting at Brooklands.

On Saturday, October 8th, the British Motor Cycle-Racing Club will hold its championship meeting at Brooklands, which will include seven scratch races—one each for 250, 350, 500, and 1,000 c.c. solo, and 600 and 1,000 c.c. sidecars and cycle cars. The last-mentioned event will be for machines conforming to the F.I.C.M. definition, i.e., maximum engine capacity 1,100 c.c., maximum weight 772 lb. All races will be five laps in length. Entries close at noon on Wednesday next.

Lady Motor Cyclist Climbs Rising Sun.

Members of the Birmingham M.C.C. are rather anxious to learn if a lady motor cyclist has ever previously climbed Rising Sun Hill (Gambles Lane), near Cheltenham. In the club's recent trial to Chepstow, Miss Hammond, on a 2½ h.p. Connaught, made a clean ascent.

Demonstration by Wind Waggon.

A wind waggon which recently had trouble in Ludgate Circus demonstrated three things, says *The Autocar*: (1) That the propeller stream effectually swept the road and sent the sweepings into people's eyes; (2) that the body was almost blurred with vibration; (3) that it is not so easy as it looks to pilot a car of this type in traffic.

The Late A. V. Baxter.

It is with sincere regret that we have to record the death in South America of Mr. A. V. Baxter, old time motor cyclist and one time a prominent member of the Coventry and Warwickshire M.C. Mr. Baxter, who held a responsible position with the Erasmic Co., of Warrington, left England last month on a business trip to Rio de Janeiro, where he was operated upon for appendicitis, and died on the 5th inst.

Two A.C.U. Lieutenant-Colonels.

Lt.-Col. D. F. Nicholl, D.S.O., besides being one of the most energetic of A.C.U. officials, is an enthusiastic cycle carist. He followed the recent Six Days Trials on his G.N., and so gained a first-hand impression of the performances of the riders and the conditions under which they rode. In one of our references to Lt.-Col. Nicholl's ubiquitous G.N., Lt.-Col. Brereton's name was mentioned when Lt.-Col. Nicholl's name was obviously intended.

TEAM TRIAL AT HARROGATE.

Five Teams in Harrogate and District M.C.C. Annual Event.

IN somewhat dull weather on Saturday last the Harrogate and District M.C.C. held its annual team trial, which was of the non-stop variety. Several observed hills were included, chief of which were Wilsill Raikes, Brownstay Ridge (long and of good gradient), and Hebden Wood. Five teams competed.

All the competitors did well, except A. Hill (4 Triumph), who had one stop with clutch trouble, and R. E. Eastwood (6 Zenith sc.), who failed on two hills. The following retired: F. J. Leak (2½ Douglas), H. Robinson (8 Zenith sc.), and W. R. Hill (2½ Velocette).

Only two complete teams finished, and, owing to two riders of one of the teams deviating from the course, it is doubtful whether they will be entitled to an award.

Provisionally, the winning team is: H. James (2½ Excelsior), J. H. Holmes (3½ Scott), and T. W. Monkhouse (4 Triumph sc.).

Individual prizes:

UNDER 350 c.c.—H. James (2½ Excelsior).
OVER 350 c.c. (Solo).—J. H. Holmes (3½ Scott) and G. Hill (3½ Scott) tied.
PASSENGER MACHINES.—C. R. Waddington (10 Morgan-M.A.G.).
CONSOLATION PRIZE.—R. E. Eastwood (6 Zenith sc.).

HARROGATE AND DISTRICT M.C.C. TEAM TRIAL.
A. Baines (3½ Zenith-Bradshaw) making a neat ascent of Hebden Bank.

The SCOTTISH "Two Days"

Although the weather was fine, the lonely officials on Talla Linn were glad when the leading competitors hove in sight. "No. 1" is J. B. Sanderson (2½ Hawker) and "No. 2" W. B. T. Sanderson (3½ Scott).

Successful Second Annual Week-end Event of the Edinburgh and District M.C.

THE success of last year's Scottish "Two-Days" left no doubt in the minds of the organisers as to the wisdom of following it up as an annual event, and at any rate, in so far as entries are concerned, this year has surpassed the expectations of its promoters.

With L. B. C. Cunningham as organiser and Campbell McGregor as secretary, there was no question of the administration falling short, and as onlookers we have been impressed by the smooth working of the trial.

Last week we published a list of entries, to which there are many late additions. The Rover light car team, consisting of Alan Hill, D. J. Cullen, and J. O'Connor, came in at the last moment, as did other light car entries, including two Galloways, one driven by Miss Pullinger, the only lady competitor, a Carden, driven by Capt. Carden, and a Rhode in the hands of Norman Macmillan. There were eighty-four entries, of which only seven failed to start. Of these, thirty-seven were solo machines, twenty-two sidecars, and twenty-three four-wheelers. The two Scott Sociables around which some interest is centred, as this is their first important event, were recognised in the sidecar class, contrary to A.C.U. ruling.

Twelve Teams.

There were eight agents' teams and four club teams, the former representing Edinburgh Pioneers, Ltd., Moir and Baxter, Alexander and Co., Rossleigh, Duthie and Sons (Montrose), W. D.

Donaldson (Grantown-on-Spey), Andrew Downie, Ltd. (Edinburgh), and D. R. Engineering Co., Ltd. (Dunfermline); while the club teams were Kelso and District M.C.C., Grantown-on-Spey M.C.C., West Fife M.C.C., and Edinburgh and District M.C.

The route was from Liberton, which the first solo rider left at 7.30, and followed a more or less direct course via an easy check at Broughton to the now

famous test hill of Talla Linn, which is situated amidst grand scenery.

Having made a circuit of Selkirk, the competitors proceeded by little known and tortuous ways to Moffat (lunch), and on through the beautiful "Southern uplands" via Thornhill, Dalry, New-Galloway, and Newton Stewart to Stranraer, 197 miles, for the week-end.

The return trip, no less beautiful though perhaps less trying, was 145 miles.

J. Shepherd (8 Chater-Lea sidecar) among the Lowland hills.

Scottish Two Days—

On Saturday there were three hills—Talla Linn, Selkirk, and the bewildering Tynron. On Monday the official crags were Primmore (of which ugly rumours were afoot), Binnfoot, and an almost perpendicular climb in one of the Edinburgh parks—Last Straw Hill.

Talla Linn Hill has a thin shingle surface, is about threequarters of a mile in length, and has a persistent gradient of 1 in 4 to 1 in 5. It is succeeded by an atrocious mountain track, including water-splashes, after seven miles of which came the check—a short check of the knockout variety. There were few failures on Talla Linn. Capt. Carden had to shed his passenger, who pushed nobly. Roger Macrae (7-9 Harley-Davidson sc.) put up by far the star ascent, climbing at quite terrifying speed. Grinton (on a sister machine) also did well. The Scott Sociables had abundant power, though their gears were standard, but on this and the subsequent hills their drivers sat on the bodywork, and the passengers occupied the wheel seat to obtain wheel grip. D. M. Galloway, who was sporting enough to enter a 3½ h.p. racing N.U.T. with fixed gear, naturally failed. When we saw his machine at Moffat, it looked distinctly the worse for wear. J. W. Morton (3½ Rover), R. Watson (4½ Humber), A. L. Downie (5-6 Raleigh), and J. M. Philipps (3½ Sunbeam), all put up sensational climbs. T. Michie (3½ Norton) had evidently failed before Talla Linn, and A. F. Sidford (8 Matchless) had something wrong with his engine, as throughout the day he had a mysterious lack of power on the hills.

Mountaineering in Selkirk.

Reaching Selkirk, the route was somewhat bewildering, and competitors seemed to be riding in all directions. Shooting through back streets, they suddenly found themselves precipitated at the foot of a steep but short hill crowded with spectators and with numerous police mounting guard. Having climbed or succumbed, the competitors were hurtled round further right-angle bends amidst

R. S. Macrae (7-9 Harley-Davidson sidecar) on the shingle of Talla Linn. This severe incline was negotiated with comparative ease by the majority of competitors.

mad cheers from the populace, till, many, hatless and perspiring, doubled back from the main road at a giddy angle, ascended an almost vertical stretch between high stone walls for twenty paces, skidded round a hideous hairpin, hit a gulley, and proceeded crabwise up a river bed of 1 in 2½. Here the riders found themselves serenely on the high road again, with the check within hailing distance.

Looking back, it was all a dim dream of jolts, corners, loose stones, and the mad cheers; more a test of driving than anything else.

There were comparatively few failures. Sanderson (3½ Scott) stopped as though his petrol were turned off. The youngest Fairley on a 2½ h.p. Hawker had to push here, as on Talla Linn, as he had forgotten to mix oil with his petrol. McKeand (8 Blackburne sc.) collided with the wall, and subsequently retired.

An examination of the machines at the Moffat lunch stop revealed that one or two showed signs of wear. Capt. Carden had transferred his buckled back wheel to the front. A. Ure (Harley-Davidson sc.) failed to turn up; he had tried to climb on a flat tyre. Galloway's N.U.T.

On Talla Linn, included also in last year's Scottish "Two Days." G. Stokes (5-6 Rover sidecar) leads A. F. Downie (7 A.J.S. sidecar) and A. Ure (7-9 Harley-Davidson sidecar).

At the Moffat check—a welcomed opportunity for competitors to exchange experiences. The group includes D. Wright (4 Indian Scout), J. Hendrie (3 1/2 Sunbeam), and A. K. James (4 Harley-Davidson).

dangled its silencer, and H. E. Fairley's 2 1/2 h.p. Hawker sidecar, which was performing marvellously, had its wheels two or three inches out of track.

Tynron Hill, the tit-bit of the whole day, was steep, the corners were difficult, and the surface slippery. Only four of the sidecars succeeded, and of these two had chain non-skids.

The solo machines on the whole did wonderfully well, but the lightweights were outstanding. The Velocette ridden by W. T. Tiffen ran off the road, but bumped back and continued to climb, amidst cheers from the huge crowd. W. R. Bruce (5 Monopole) fell, but kept his engine going, and, jumping on again, continued as though nothing had happened. One rider smote a tree and mounted the trunk about 18in.

Grinton and Macrae, both on Harley-Davidson sidecars, made splendid performances, but the palm goes to H. E. Fairley, who piloted his little 2 1/2 h.p. Hawker sidecar safely through. Much credit is also due to Neville Hall, who similarly put up a wonderful performance on a 2 1/2 h.p. O.K. sidecar. The Scott Sociables, which had run all day as though roped together, here reluctantly parted. Batten got on to the grease, and his rear wheel began to bury itself. Rhodes, in the sister machine, continued to climb steadily.

The first day finished with forty-two entrants still in the running for premier awards. Five had retired. The arrowing throughout Saturday's run was faultless; and though such a large entry took the little town of Stranraer rather by storm, everybody was comfortably billeted for the night.

MONDAY'S RUN.

Ideal weather conditions prevailed for the second half of the trial, and a most interesting run through fine scenery and over fairly good roads was enjoyed on

Monday. Competitors passed through Ballantrae to Pinnore, where the first hill in the day's run was tackled. Short, and with one bend, this hill presented few difficulties, yet there were five failures as follows: L. P. Waldie (3 1/2 single-gear N.U.T.), D. Cairns (3 1/2 Douglas), D. S. Anderson (8 Enfield sc.), R. Spence (8 Chater-Lea sc.), and G. H. Moir (G.N.).

A very twisty, narrow road led over the hill to Patna and Burnfoot Hill, a fairly long gradient, but with an atrocious surface. Large boulders and rock were sticking well up.

Under the circumstances the number of failures was very low. L. P. Waldie (N.U.T.) made a very good climb, as did Morton (3 1/2 Rover), Watson (4 1/2 Humber), S. B. Waldie (4 Blackburne), and Tiffen (Velocette). Wright (Indian) made a fast climb, but failed at the top. Other failures were Whyte (Sunbeam) and Anderson (8 Enfield sc.). The Carden made a very clean ascent, while Rover light cars put up splendid performances. Fairley (Hawker sc.) broke his belt when going well. After repairing it he made a good ascent.

There was only one more test hill after Burnfoot, and this was the steep ascent of Blackford Hill, a mile or so from the finish.

In to-morrow's issue of *The Autocar* particulars are given of the performances of the twenty-two light cars in the trial.

The debut of the Scott Sociable in a severe trial. J. Rhodes and H. M. Batten were the drivers.

INTER-CLUB RALLY AT HENDON.

ALTHOUGH somewhat marred by stormy weather, the first annual inter-club rally of the North London M.C.C., held at Hendon on Saturday, was a decided success.

The chief award, the challenge shield presented by Mr. A. J. F. Beaurain, was

gained by the Connaught M.C.C., which attained the highest figure of merit (i.e., percentage of members present multiplied by mileage from club headquarters).

A strong wind, unfortunately, nullified the facilities afforded to those present for flights at a reduced rate, and although

several flights were enjoyed, chief interest centred on the minor competitions.

Mrs. Uhde, of the Surbiton and District M.C.C., gained the special prize (a Vici carburetter) for having ridden the greatest distance to the meet, whilst Walter Scott's expenditure of energy in polishing his

Inter-club Rally at Hendon—machine was awarded by the gift of an Elite motor cycle cover. Both of these prizes were presented by the manufacturers.

Two "gymkhana" events had for their awards copies of "Motor Cycles and How to Manage Them" and "Tracing

Troubles" (presented by this journal); but on consideration it would seem that the former prize was almost too cruelly appropriate!

E. W. Cholcroft's A.J.S. sidecar won the prize of a Service motor cycle watch for having the most ingenious "gadget." His machine was fitted with several detail

modifications, particularly to the lubricating system, and to the air intake of the carburetter.

There is little doubt that this rally will become a most popular annual event, and we should expect an even more representative assembly next year when the event is repeated.

General view of some of the machines at the North London M.C.C.'s Rally, parked in Hendon aerodrome.

BROOKLANDS RACING IN THE RAIN.

Keen Races, but Adverse Weather Conditions at Sixth B.M.C.R.C. Members' Meeting.

SOME quite good sport was seen at the Sixth Members' Meeting of the B.M.C.R.C. at Brooklands last Saturday, but the advent of chilly rain, half-way through the afternoon made conditions for competitors and spectators none too pleasant. Several records were broken during the afternoon.

The programme commenced at noon with the Junior One Hour Sidecar Handicap, which was won by O'Donovan on a "Big 4" Norton at 56.58 m.p.h., with G. H. Tucker (3½ Norton sc.) and Le Vack (3½ Indian sc.) second and third respectively. These three competitors each succeeded in breaking the one hour sidecar record for machines up to 600 c.c. R. C. Chawner (Sunbeam) retired in his seventh lap through a faulty valve cap, and two other competitors retired with minor troubles. Also ran: C. G. Pullin (3½ Douglas), J. Wallace (3½ Duzmo), R. C. Chawner (3½ Sunbeam), and R. Deguin (3½ Rover).

In the second event, the Senior One Hour Sidecar Race, things resolved themselves into a duel between Temple (7-9 Harley-Davidson sc.) and Harveyson (7-9 Indian sc.), Le Vack, the star Indian performer, stopping no fewer than three times, one of the causes being a blown out cylinder plug. Temple won the event at 65.43 m.p.h., with Harveyson close up behind. S. E. Longman (8: Zenith sc.) was third. Le Vack broke the five-mile record despite his misfortune.

Solo Handicap.

The Three Lap Handicap for solo machines not exceeding 350 c.c. provided no undue excitement, J. V. Prestwich, on a 2½ h.p. Diamond-Jap, winning at 61.84 m.p.h., with J. W. Tollady (2½ Velocette) a near second, and K. Don (2½ Massey-Arran) third.

In Event 4, the Three Lap Handicap for solo machines not exceeding 500 c.c.,

an excellent win was achieved by J. W. Tollady, on a Scott-Squirrel, at 63.5 m.p.h. against a fairly large field. Tollady maintained his lead throughout the race, with R. G. Spikins (3 A.B.C.) and R. E. Dicker (3½ Norton) as second and third.

A win for a flat twin Harley-Davidson formed the feature of Event No. 5, a

J. W. Tollady (3½ Scott Squirrel) who won the 500 c.c. handicap.

Winner of two events—R. E. Dicker (3½ Norton).

Brooklands Racing in the Rain.—

Three Lap Handicap for solo machines up to 1,000 c.c., this machine, which had two carburettors, being ridden by T. R. Allchin at 68.9 m.p.h. One of the competing machines, an 8 h.p. Sunbeam-Jap (G. Packman), simply heaved its front wheel off the ground on getting away, presumably due to the clutch taking up too quickly. C. F. Temple, the scratch man, on his big Harley-Davidson, dropped out of the race shortly after the start, and did not restart.

1. T. R. Allchin (6 Harley-Davidson)	m. s.
2. A. G. Miller (7-9 Indian)	1 54
3. E. H. Gifford (6 Martinsyde)	0 51
	1 9

The last race, the "Winners' Handicap," open to the first four riders in Events 3, 4, and 5 (rehandicapped on their performance) was won by R. E. Dicker (3½ Norton) at 68.32 m.p.h., the handicapping of the machines being well carried out, with the competitors finishing in a fairly close knot. The rain by this time had made the track very wet, and it was well that the meeting had been smartly run off.

1. R. E. Dicker (3½ Norton)	m. s.
2. R. N. Stewart (3½ Trump-Jap)	1 12
3. E. H. Gifford (6 Martinsyde)	1 25
	0 32

RESULTS OF THE RELIANCE CUP TRIAL.

PROVISIONAL results have now been announced of the Liverpool M.C. Reliance Cup trial, which was described in *The Motor Cycle* last week. There was a tie for the chief award between Reg. Brown (3½ Sunbeam sc.) and G. W. Shepherd (8 Excelsior sc.). The full award list is as follows:

RELIANCE OPEN CHALLENGE TROPHY.—Reg. Brown (3½ Sunbeam sc.) and G. W. Shepherd (8 Excelsior sc.), tie.

RELIANCE AMATEUR TROPHY.—N. O. Slater (4 Norton).

BUTTERWORTH CHALLENGE TROPHY.—J. H. Green (8 Excelsior sc.).

MACHINE TEAM PRIZE.—No award. No teams succeeded in obtaining three gold medals.

CLUB TEAM PRIZE.—Liverpool No. 1. N. C. Slater (4 Norton), J. H. Fox (4 Norton), and J. H. Green (8 Excelsior sc.). Club spoons and gold medals.

GOLD MEDALS.—J. H. Green (8 Excelsior sc.), Reg. Brown (3½ Sunbeam sc.), G. W. Shepherd (8 Excelsior sc.), N. C. Slater (4 Norton), J. H. Fox (4 Norton), G. S. Boston (3½ Sunbeam), G. Dance (3½ Sunbeam), J. H. Davies (3½ Sun-

Awaiting the word to start in the "Winners' Handicap"—T. R. Allchin, on a stripped Sports Harley, is in the foreground.

beam), W. Wills (3½ Sunbeam), W. J. Astley (3½ Sunbeam), H. E. Astley (6 L.M.C.), R. O. Jones (3½ B.S.A.), J. A. Newman (3½ Triumph), A. E. Evans (3½ Sunbeam), O. P. Wood (3½ Scott), and H. M. Ardwick (—).

SILVER MEDALS.—V. Horsman (4 Norton sc.), F. A. P. Zacharias (3½ Sunbeam), W. E. Pope (3½ Triumph), Miss B. Pickering (4 Powell), and W. J. Kellitt (4 Triumph).

BRONZE MEDALS.—A. Bennett (3½ Sunbeam), J. O. Jones (4 Triumph), O. Wade (2½ A.J.S.), J. T. Jones (3½ Sunbeam), J. W. Wills (4 Powell), W. Edwards (4 Powell), H. S. Bayton (3 A.B.C.), H. O. Powells (3½ N.U.T.), C. Warbrick (3½ Sunbeam), R. O. Hughes (4 Triumph), L. A. Bees (2½ Beardmore-Precision), and J. C. Oates (2½ Edmund).

NEXT MONDAY'S ANGLO-DUTCH TRIAL.

THE organisation is now complete for the entertainment of the riders who will represent Holland in the Inter-England on Monday next. On Saturday the visitors will be the guests of the Midlands Centre A.C.U. at Leamington. On Sunday the Western Centre A.C.U. are the hosts at a dinner in the Guildhall,

Worcester, communications regarding which should be addressed to Mr. E. Featherstone, Tregantle, Leckhampton, Cheltenham.

At the conclusion of the trial the competitors will be entertained by the A.C.U. and the Surbiton M.C.C.

Major Dixon Spain, the organising secretary of the trial, has issued the following final instructions:

HOTEL ACCOMMODATION.—Hotel accommodation has been arranged for competitors at Worcester for the night of Sunday, the 25th inst., and at Thames Ditton for the night of Monday, the 26th inst. Lunch has also been arranged for at Newbury on the day of the trial. Competitors will be required to settle their own accounts at these places, as no coupon system will be provided.

ASSEMBLING.—All competing drivers with their motor cycles must report to the Chief Marshal at the Hopmarket Hotel, Worcester, between the hours of 4 and 6 p.m. on Sunday, September 25th, 1921. Motor cycles must be presented ready to start, filled with oil and fuel, and with their number plates securely fixed. These number plates will be supplied at the above headquarters and must be securely fixed on either side of the rear wheel. In the case of sidecars the rear side number plate must be fixed securely to the sidecar wheel.

THE LATEST MODEL OF A REPRESENTATIVE DUTCH MOTOR CYCLE.

The twin-cylinder Simplex which embodies several well-known British components, including Druid forks, Amac carburetter, and Terry spring saddle. The engine is a M.A.G. of 600 c.c. capacity. Observe the pillion seat constructed as part of the machine, and complete with footrests. 28×3in. tyres are fitted.

PENKRIDGE RECORDS BROKEN.

Successful Open Hill-climb organised by the Midland Centre A.C.U.

G. S. Boston ($2\frac{3}{4}$ A.J.S.) made fastest time in the 350 c.c. solo and sidecar classes, which were both very hotly contested. He is shown crossing the starting line in the sidecar event.

DESPITE the peculiar partitioning of the twenty-eight classes on the programme, last Saturday's open hill-climb of the Midland Centre A.C.U. at Penkridge Bank was not at all an uninteresting affair.

Apparently the aim of the promoters was to give everybody a chance. Because the 350 c.c. two-strokes promised to be no faster than the 250 c.c. four-strokes, there was a 251-350 c.c. two-stroke class; because the best " $3\frac{1}{2}$'s" would most assuredly be faster than the big twins, there were classes from 501 c.c. upward; and so on. Curiously enough, there were only two twins in the event.

Incidentally, it was thus impossible for Dance to win 90% of the open classes, as he has been doing lately; for his $2\frac{3}{4}$ h.p. and $3\frac{1}{2}$ h.p. o.h.v. Sunbeams were only eligible for five capacity classes. He won four of these with considerable ease, but was not placed in the fifth, the 350 c.c. solo class, which was won by G. S. Boston ($2\frac{3}{4}$ A.J.S.), and in which only $\frac{3}{8}$ s. separated the first three men. Later it transpired that the Sunbeam rider had claimed a baulk, which was allowed; but a puncture prevented him from attempting a re-run.

80 m.p.h. Uphill!

Fastest time of the day—27 $\frac{3}{4}$ s. for the flying kilometre, made by Dance in the handicap event—equals the amazing speed of 80.47 m.p.h. (The steepest portion of Penkridge is about 1 in 15, and there is a slight bend, which several of the riders dared not take at 50 m.p.h. without cutting out! There was, however, a following wind.)

G. S. Boston ($2\frac{3}{4}$ A.J.S.) and C. Greenwood (both on a $2\frac{3}{4}$ h.p. o.h.v. Sunbeam, which had only been assembled into a standard frame on the previous day, and on his old 4.5 h.p. Sunbeam) shared honours for the second best performance generally.

H. W. Hassall ($\frac{3}{2}$ Norton) and H. R. Davis ($2\frac{3}{4}$ A.J.S.) had to be content with

places, although they both ascended at nearly 70 m.p.h.

Making his *début* on a T.T. o.h.v. Triumph, G. L. White did well to secure two seconds and a third from only two runs; whilst A. L. Tompkins's ($3\frac{1}{2}$ Norton) winning time in the 500 c.c. expert barred class was also very creditable.

Two-stroke versus Four-stroke.

Thrush, on a Levis, was just too fast for Kershaw's New Imperial in the class where two-strokes and four-strokes were permitted to fight it out together; but Kershaw won the "four-strokes only" class comfortably.

Although beaten in its class by both E. A. Barnett ($2\frac{1}{4}$ Francis-Barnett) and

D. Atkins ($2\frac{1}{4}$ Hobart), the new sporting model o.h.v. Coventry-Eagle, in the hands of J. W. Moxon, made a most promising first appearance. These three riders and several others would probably have made considerably better times had they known beforehand that the removal of mudguards, carriers, etc., was to be permitted. The Coventry-Eagle had 5in. guards front and rear.

Close Handicapping.

Had A. R. Evans ($3\frac{1}{2}$ Sunbeam) not taken 6 $\frac{1}{2}$ s. off his first time, the handicapping of Mr. P. W. Bischoff would have been extraordinarily close. Fourteen qualified for this class, with the following result:

That do or die spirit! An amusing picture of A. W. Thrush ($\frac{3}{4}$ Sunbeam), handing over the tally in the relay race to A. R. Evans ($3\frac{1}{2}$ Sunbeam), taken just 1 $\frac{1}{2}$ s. before he fell over amongst the tensely expectant crowd on the left.

Penkridge Records Broken— SOLO HANDICAP.

	Net time.	H'cap time.
1. A. R. Evans (3½ Sunbeam) ..	39½s.	26½s.
2. J. C. Greenwood (4½ Sunbeam) ..	30½s.	27½s.
3. F. J. Price (2¼ Diamond) ..	41½s.	27½s.
4. G. Dance (3½ Sunbeam) ..	27½s.	27½s.

Only four teams competed in the inter-team relay race, which was chiefly remarkable for the spectacular pull-up of A. W. Thrush, who succeeded in upsetting a couple of spectators, but not seriously.

INTER-TEAM RELAY RACE.—1. G. Dance (3½ Sunbeam) and C. Greenwood (4½ Sunbeam), 52s.; 2. H. W. Hassall (3½ Norton) and A. L. Tompkins (3½ Norton), 56½s.

The organisation throughout was good, and a large crowd of spectators appeared thoroughly to enjoy the event. Results:

350 c.c. SIDECARS (Open).—1. G. S. Boston (2¼ A.J.S. sc.), 37½s.; 2. H. R. Davies (2¼ A.J.S. sc.), 38½s.

351-600 c.c. SIDECARS (Open).—1. G. Dance (3½ Sunbeam sc.), 37½s.; 2. H. R. Davies (2¼ A.J.S. sc.), 40½s.

351-600 c.c. SIDECARS (Experts barred).—1. C. Greenwood (4½ Sunbeam sc.), 38½s. (walk-over).

UNLIMITED SIDECARS (Open).—1. G. Dance (3½ Sunbeam sc.), 34½s.; 2. G. S. Boston (2¼ A.J.S. sc.), 38½s.; 3. H. R. Davies (2¼ A.J.S. sc.), 39½s.

UNLIMITED SIDECARS (Expert barred).—1. C. Greenwood (4½ Sunbeam sc.), 39½s.; 2. G. J. Read (6 Enfield sc.), 44s.

250 c.c. TWO-STROKES (Open).—1. F. C. R. Ingram (2¼ Villiers), 37½s.; 2. A. W. Thrush (2¼ Lewis), 40½s.

250 c.c. TWO-STROKES (Expert barred).—Same as preceding class.

250 c.c. FOUR-STROKES (Open).—1. B. Kershaw (2¼ New Imperial), 41½s.; 2. E. A. Barnett (2¼ Francis-Barnett), 45½s.; 3. D. A. Atkin (2¼ Hobart), 45½s.

250 c.c. FOUR-STROKES (Experts barred).—1. E. A. Barnett (2¼ Francis-Barnett), 45½s.; 2. D. A. Atkin (2¼ Hobart), 45½s.; 3. J. W. Moxon (2¼ Coventry Eagle), 47s.

250 c.c. CLASS (Any machine, open).—1. A. W. Thrush (2¼ Lewis), 40½s.; 2. B. Kershaw (2¼ New Imperial), 41½s.; 3. F. J. Price (2¼ Diamond), 41½s.

250 c.c. CLASS (Any machine, experts barred).—Same as preceding class.

251-350 c.c. TWO-STROKES (Open).—1. H. Greathead (3 Ivy), 49½s.; 2. F. Whitworth, Jun. (3 Ivy), 50s.; 3. N. Sayage (2¼ Villiers), 50½s.

251-350 c.c. TWO-STROKES (Experts barred).—Same as preceding class.

251-350 c.c. FOUR-STROKES (Open).—1. G. S. Boston (2¼ A.J.S.), 32½s.; 2. C. Greenwood (2¼ Sunbeam), 33½s.; 3. H. R. Davies (2¼ A.J.S.), 33½s.

251-350 c.c. FOUR-STROKES (Experts barred).—1. C. Greenwood (2¼ Sunbeam), 33½s.; 2. G. E. Rowley (2¼ A.J.S.), 46s.; 3. — Linforth (2¼ Arms), 48½s.

351-500 c.c. CLASS (Open).—1. G. Dance (3½ Sunbeam), 28½s.; 2. A. L. Tompkins (3½ Norton), 34½s.; 3. G. L. White (3½ Triumph), 35½s.

351-500 c.c. CLASS (Experts barred).—1. A. L. Tompkins (3½ Norton), 34½s.; 2. G. L. White (3½ Triumph), 35½s.; 3. B. Fidgeon (3½ Norton), 37½s.

501-1,000 c.c. CLASS (Open).—1. C. Greenwood (4½ Sunbeam), 30½s.

501-1,000 c.c. CLASS (Experts barred).—Same as preceding class.

UNLIMITED CLASS (Open).—1. G. Dance (3½ Sunbeam), 28s.; 2. H. W. Hassall (3½ Norton), 31½s.; 3. G. S. Boston (2¼ A.J.S.), 32½s.

UNLIMITED CLASS (Experts barred).—1. C. Greenwood (4½ Sunbeam), 31s.; 2. G. L. White (3½ Triumph), 34½s.; 3. B. Fidgeon (3½ Norton), 36½s.

CYCLE CARS (Open).—1. W. A. Carr (8 Morgan), 46½s.

CYCLE CARS (Experts barred).—Same as preceding class.

CLUB NEWS. (Continued from page 355.)

Redditch and District M.C.C.

Open to all members of the Midland Centre A.C.U., a one-day reliability trial will be held on Saturday, October 8th. Three valuable trophies are included in the award list, and further particulars may be obtained from the honorary secretary, Mr. P. C. English, Easemore Road, Redditch.

Berwick and District M.C.

Yetholm—well known in the North as being the home of that famous tribe of gypsies who have roamed the Borderland for hundreds of years—was the destination of the club's recent reliability trial and the scene of a timed hill-climb included therein. Results:

RELIABILITY RUN.—W. Hogg (3½ P. and M.) and W. H. Dodds (4 Triumph) tied for first place.
HILL-CLIMB.—Solo Class: G. Gore (3½ James). Sidecar Class: J. I. Elder (7 A.J.S. sc.).

Luton and South Beds. A.C.

Lady Ludlow has again given the use of the track in Luton Hoo Park for the club's annual speed trials, which are to be held there on Saturday afternoon. Entries to be made by Friday to the trials secretary, Mr. J. Simpson, 440, Hitchin Road, Luton. Members joining for this event will be regarded as full 1922 members.

Birmingham M.C.C.

Results of the Birmingham-Chepstow, Chepstow-Birmingham trial have been announced as under:

CLASS A.—Gold medals: W. E. Bayliss (2¼ New Hudson) and Miss E. Hammond (2¼ Connaught); Silver medals: E. J. Bastock (2¼ Lewis), A. W. Thrush (2¼ Lewis), and G. F. Mason (2¼ Connaught).

CLASS B.—Gold medal: J. L. Shaw (2¼ A.J.S.). Silver medals: S. Hall (3½ Sunbeam), A. H. Stubbs (2¼ Marlow), W. R. Urwin (2¼ Wilkin), C. M. Lindsey (2¼ Wilkin), J. C. Orford (4 Blackburne), and R. W. Duke (4 Triumph).

CLASSES D AND E.—Gold medal: H. V. Collins (3½ Norton sc.). Silver medal: B. Bourke (4 New Hudson sc.). Bronze medal: A. H. Haden (2¼ New Comet sc.).

CLASS F.—Gold medal: A. Woodfield (7 James sc.). Silver medals: L. H. Perry (10 Morgan), F. L. Bolderston (6 A.J.S. sc.), R. W. Vaughan (Massey-Arran sc.), and R. E. Newcombe (6-7 Ariel sc.).

On October 1st a half-day sporting trial will be held in the neighbourhood of Birmingham. Non-members of the club are particularly invited to join and enter at special fees. Further particulars may be obtained from the trials secretary, Mr. L. Clark, 43, Leyton Road, Handsworth.

Worcester and District M.C.C.

Next Saturday, the week-end the Anglo-Dutch Trial starts from Worcester, the club will hold its second annual hill-climb, which will be open to any clubs in the Western Centre A.C.U. Several well-known riders will compete.

Bradford M.C. and L.C.C.

Of the seventeen starters in last week's reliability trial for the Wilson cup there were three non-finishers. Results:

WILSON CUP (to be held for one year) and **STANDARD GOLD MEDAL.**—S. E. Wood (Harley).

SPECIAL GOLD MEDAL.—G. Townsend (P. and M.).
SPECIAL GOLD MEDAL.—J. Snowden (Matchless).

Only these three competitors made a clean climb of the hill, and the result was found by seconds error in the secret check.

Manchester M.C.

The third and last of the series of short evening trials for the Taylor bowl was run off on Wednesday of last week, when about fifteen competitors set off from Bucklow Hill on a twenty miles paper-chase through Cheshire lanes and byways. Results: 1. H. Clayton (2¼ Dot); 2. O. E. Carter (3 A.B.C. sc.). The winner of the Taylor bowl has not yet been decided.

The club will hold speed trials (twelve classes) at Bills-o-Jacks, near Greenfield, on September 25th. Event No. 12 will be special, open to any motor cycle, sidecar outfit, three-wheeler, or car competing in any previous class on handicap, for the Woodward Cup. Classes 1 to 8 are for machines "as per makers' list, complete with touring equipment."

"SPORTING RUNS." Many clubs have this year selected particularly sporting routes for their trials, among them being the Ipswich and District M.C.C. The illustration depicts E. C. Lunnis (8 Sunbeam sidecar) in the Noah's Ark watersplash, which was included in a thirty mile non-stop event held recently.

'FLOAT-ON-AIR'

SADDLE CUSHION

FOR PERFECT SADDLE COMFORT

AN IDEAL AIR CUSHION!

It gives a flat yielding surface, soft and comfortable on the roughest roads, and doubling the PLEASURE OF MOTOR CYCLING.

Two Sizes:
Large—14 inches wide.
Small—12 inches wide.

PATENT APPLIED FOR.

NO LEAKING!
NO HEATING!
NO Vibration!

Mr. Starr writes:
"The cushion is a boon. Just what is wanted at a reasonable cost."

Mr. W. J. Darnell writes:
"Gives a surer and firmer seat—minimises the discomfort of long hours in the saddle."

ABOUT ONE-FOURTH OF
WAR-TIME PRICE

and quite 50%
below present-
day values.
These goods can
never be dupli-
cated at this
price.

Brand New, check
lining, oilskin inter-
lining, and with
detachable fleece
lining.

These coats are
direct from the
Liquidation and
Disposal Commis-
sion and are
guaranteed to be as
described above.
They are imper-
vious to weather.
Worn with the
fleece lining, they
combine the
warmth & comfort
of an ulster with
the rain resisting
qualities of a stout
mackintosh. With
this lining detached

they are a light, elegant raincoat. Thousands of officers and
ex-officers testify to their worth. They will last for years—
even war conditions could not wear them out.

**They are specially suitable
for Motorists.**

When ordering, state height and chest measurement over
waistcoat. Chest sizes:—34, 36, 38, 40, 42, 44 inches.
Delivery is made in from 7 to 14 days. Prepaid mail orders
only are accepted, and if the coat does not give complete
satisfaction, money will be at once refunded without question,
provided garment is returned undamaged within 7 days.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.
ADVERTISEMENTS in these columns—First 12 words 3/-, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.
Postal Orders and Cheques sent in payment for advertisements should be made payable to **LILFEE & SONS Ltd.,** and crossed Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.
All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.
The proprietors are not responsible for clerical printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.
For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of postage and to cover postage on replies must be added to the advertisement charge, which must include the words Box no. c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."
In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements no mention of the district in which the machine is sold may be seen and tried.

DEPOSIT SYSTEM.
Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt. The time allowed for a decision, after receipt of the advertisement is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays postage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 10/6. All deposit matters are dealt with at Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Lilfee & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally anxious, but have not advised us to that effect.

SPECIAL NOTE.
Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the advertisement as an indication that the goods advertised have already been disposed of. Advertisers often receive many enquiries that it is quite impossible to reply to in any one by post.

MOTOR CYCLES FOR SALE.
A.B.C.
A.B.C. 1920 Combination, dynamo model, with a Swan sporting sidecar, completely equipped, including speedometer and 1921 licence; a genuine Dayton type bargain, £215.—The Layton Garages, 30, Foleywell St., Oxford. Phone: No. 581. [9260]
